**Disclaimer**

This publication may contain occupational health and safety and workers compensation information. It may include some of your obligations under the various legislations that WorkCover NSW administers. To ensure you comply with your legal obligations you must refer to the appropriate legislation.

Information on the latest laws can be checked by visiting the NSW legislation website ([www.legislation.nsw.gov.au](http://www.legislation.nsw.gov.au)) or by contacting the free hotline service on 02 9321 3333.

This publication does not represent a comprehensive statement of the law as it applies to particular problems or to individuals or as a substitute for legal advice. You should seek independent legal advice if you need assistance on the application of the law to your situation.

# foreword

---

I have pleasure in presenting the sixteenth issue of the Workers Compensation Statistical Bulletin for NSW. This Bulletin provides a unique guide to the operation of the WorkCover Scheme and indicates general trends in workplace health and safety in this State.

The aim of the Bulletin is to provide an overview of the major claims in NSW. This statistical information can provide the basis for industry and individuals to build an understanding of the nature and extent of problems in their areas and assist in identification of issues for priority action.

Among the key findings reported in this edition is the welcome information that the number of workplace related fatalities recorded in 2003/04 is the lowest since the WorkCover Scheme commenced in 1987.

The total number of employment injuries was the lowest recorded since the WorkCover Scheme began in 1987.

Also welcome is information indicating that lost time due to employment injuries has reduced by nine per cent from the previous year.

Jon Blackwell  
Chief Executive Officer  
WorkCover NSW

# key findings for 2003/04

- 132 fatalities were reported in 2003/04, representing an incidence rate of 4.8 fatalities per 100,000 employees in NSW. Both in terms of number and incidence rate, these figures were the lowest since the WorkCover scheme began in 1987. Of these, 39 resulted from workplace injuries, 27 from occupational diseases and 66 from other work related injuries.
- Of the 66 other work related fatalities, 25 resulted from road traffic accidents where the person was on duty. One fatality occurred while the worker was away from work during a recess and 40 fatalities resulted from commuting to and from work.
- The incidence of workplace injuries has continued to decline over the past 10 years and is now at its lowest rate of 13.6 injuries per 1,000 employees. A total of 37,330 workplace injuries were reported in 2003/04, a decrease of 0.2 per cent on 2002/03.
- In 2003/04 there were 51,551 claims lodged for employment injuries with a total gross incurred cost of \$1,078 million. The incidence rate of employment injuries increased from 18.5 injuries per 1,000 employees in 2002/03 to 18.7 in 2003/04. The total gross incurred cost increased from the previous year by \$11 million.
- Of the 51,551 claims lodged for employment injuries, 72 per cent were workplace injuries with a total gross incurred cost of \$706 million. Occupational diseases accounted for another 19 per cent (9,604) with a gross incurred cost of \$242 million. Nine per cent were other work related injuries (4,609).
- The proportion of occupational diseases compared with all employment injuries has decreased from 26.8 per cent in 1994/95 to 18.6 per cent in 2003/04.
- 14,258 permanent disability claims were recorded, making up 28 per cent of all employment injuries.
- The total time lost due to employment injuries was 355,357 weeks, a decrease of 9 per cent from the previous year. Of these, 90 per cent were long-term injuries associated with more than 4 weeks off work and 79 per cent of the gross incurred cost.
- Occupations that were at higher exposure to risk of employment injury were labourers and related workers (53.2 injuries per 1,000 employees), intermediate production and transport workers (38.1) and tradespersons and related workers (31.4).
- Across industries, mining had the highest incidence (50.3) of employment injuries, followed by agriculture, forestry and fishing (33.7), construction (33.3) and manufacturing (32.5).
- Of the 4,609 other work related claims reported, 735 were road traffic accidents and 253 occurred while the worker was away from work during a recess.
- 3,261 injuries occurred while commuting to and from work.
- The number of mental disorder claims in 2003/04 decreased by 0.6 per cent. This is in contrast to substantial increases over the preceding three reporting periods.
- In 2003/04, total payments for all claims decreased from \$3,250 million in 2002/03 to \$2,806 million, a fall of \$444 million, or 14 per cent. When adjusted for the increase in average weekly earnings, the decrease was around 18 per cent.
- Weekly benefits paid for both total incapacity and partial incapacity accounted for 25 per cent of total payments.

# explanatory notes

---

Information in this report is based on NSW workers compensation data for the 2003/04 financial year.

## Scope and coverage

This publication is divided into seven sections:

- **Section 1** – employment injuries
- **Section 2** – fatalities
- **Section 3** – workplace injuries
- **Section 4** – occupational diseases
- **Section 5** – other work-related injuries
- **Section 6** – lost time injuries/diseases
- **Section 7** – payments

Sections 1–5 mainly focus on all new major claims in 2003/04 (including claims under WorkCover managed fund, treasury managed fund, self, group and specialised insurers), as either a duly made claim or under provisional liability. Claims included satisfy the following conditions:

- the result of injury was death, permanent disability, or temporary disability when five or more days were paid for total incapacity
- the claim entered the insurer's computer system on or after 1 July 2003 and on or before 30 June 2004.

Section 6 also includes information about all claims (major or minor) where the period paid was for one or more days.

Section 7 shows the magnitude of workers compensation payments made in the financial year and relates to all claims which have had any payments during 2003/04. Therefore, it shows payments for all claims, including claims of less than five days as well as long-term claims occurring in earlier years.

## Injuries/diseases not included in this publication

Statistics in this publication do not include all work related employment injuries occurring in NSW. The following exclusions apply:

1. Injuries and diseases for which a workers compensation or provisional liability claim has not been made.
2. Employment injuries to persons not entitled to workers compensation under the NSW legislation. These include:
  - most self-employed persons
  - employees of the Australian Government
  - employees suffering from diseases caused by the inhalation of dust, except in coal mining, as provision for compensation in these cases is made under other legislation
  - members of the NSW Police Service recruited prior to 1 April 1988. Police recruited after this date are covered under the NSW legislation, as are non-police employees of the NSW Police Service
  - casual workers employed for one period only of not more than five working days and who are employed other than for purposes of the employer's trade or business.

# explanatory notes

## Comparison of the 2003/04 publication with previous publications

The following limitations should be noted either when comparing this publication with previous editions or interpreting trends over time:

- The denominator data to calculate incidence/frequency rates for 2003/04 claims is different from previous years in that it is based on the 2001 census data. The gap in the graph between 2002/03 and 2003/04 is to highlight the fact the 2003/04 rates are not comparable with previous years.
- Occupation data are collected in accordance with the Australian Bureau of Statistics Australian Standard Classification of Occupations, Second Edition (ASCO2), as opposed to the first edition (ASCO1) which was used in statistical bulletins before 2002/03.
- Injury and illness data are collected in accordance with the National Occupational Health and Safety Commission's (NOHSC) Type of Occurrence Classification System Second Edition – Revision 1 (TOOCS 2.1), as opposed to the first edition which was used in statistical bulletins before 2002/03.
- This edition includes injuries reported to insurers under provisional liability.
- There are two main changes to the way denominator data are calculated by the Australian Bureau of Statistics in 2003/04 –
  - Change in census data used: until 2002/03 the basis for the Labour Force Survey, which is used to 'estimate' the labour force in NSW, was the 1996 census data. In 2003/04 the Australian Bureau of Statistics started using the results from the 2001 census to conduct the survey. According to the bureau, the forecasting based on the 1996 census for 2001/02 and 2002/03 denominator data was not accurate enough after comparing with data from the 2001 census.
  - Proportional allocation: In the past, individual responses to the Labour Force Survey questionnaire which could not be coded to the third digit level of industry or fourth digit level of occupation were proportionally allocated to that level. This has been deemed to be no longer appropriate for the dissemination of Labour Force Survey industry and occupation data. Now the survey data has 'Not Further Defined' codes that highlight the number of responses that could not be coded to the most detailed level of industry and occupation.

Care should therefore be exercised when making comparisons with NSW workers compensation data published prior to 2002/03. The table below summarises the differences between the workers compensation publications.

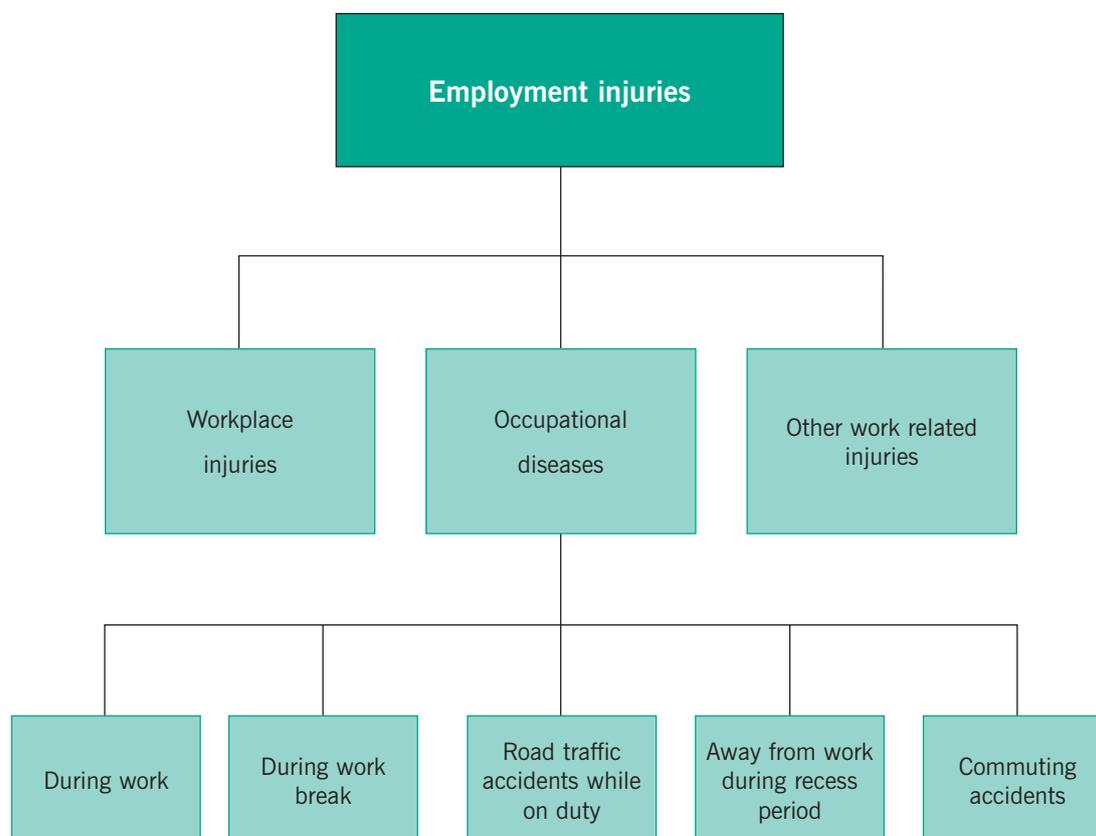

# explanatory notes

## Employment injuries

There are several categories of employment injuries and the relationship between these is shown in the accompanying flow chart. Each of these is further defined in the glossary.

## Groupings and sub-totals

Many tables in this publication show different levels or groupings classification, for example the industry or occupation tables. Main groupings are indicated in bold, while sub-groups are in smaller font under the associated group heading. Sub-group figures add up to the associated group figures (except for incidence rate, average and median), while group figures add to the total figure at the foot of the table.

## Rounding errors

For publication, payment data in the tables is rounded to the nearest \$1,000, time lost data to the nearest 0.1 week and percentages to the nearest 1 per cent. Due to this rounding, the totals in the tables will not always exactly equal the sum of the components.

## Confidentiality

To maintain confidentiality, information about time lost or cost has not been published if the figures are based on less than four claims. This is indicated in the tables by n.p. (not published).

## Data collection

All insurers licensed under the Act supply electronic data weekly to WorkCover. Some pre-WorkCover Scheme insurers that were not licensed under the WorkCover Scheme are still providing annual data on forms.

For this publication, data was collected from licensed insurers, self-insurers, specialised insurers, pre-WorkCover Scheme insurers, the NSW Government Treasury Managed Fund Scheme in respect of NSW public servants, and WorkCover's Uninsured Liability and Indemnity Scheme.

## Classification systems

### Type of occurrence

Injury and disease data have been classified according to the Type of Occurrence Classification System, Edition 2 (Revision 1), National Occupational Health and Safety Commission, Canberra 2002 (ISBN 0 642 39964 6). The relevant groups for nature, mechanism, bodily location of injury/disease and breakdown of agency are given in Classifications (Appendix C).

### Industry

Industries are classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), 1993 edition (ABS Catalogue No1292.0). The industry divisions and sub-divisions are given in Classifications (Appendix C).

### Occupation

The occupation of the injured worker is classified according to the Australian Standard Classification of Occupations (ASCO2), 2nd edition 1997 (ABS Catalogue No 1222.0). The major and minor occupation groups are given in Classifications (Appendix C).

# employment injuries

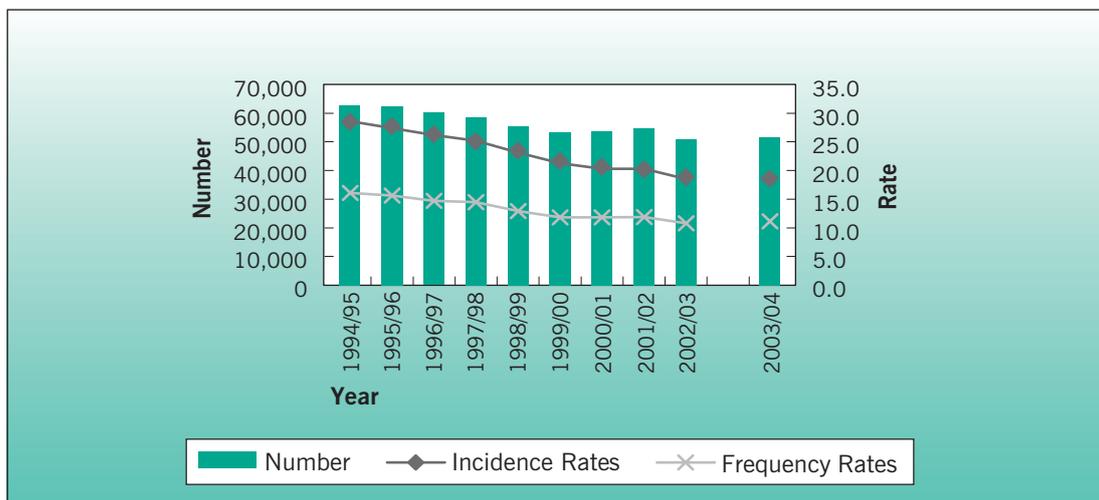

*Employment injuries comprise all injuries arising out of or in the course of a worker's employment and occupational diseases contracted or aggravated in the course of a worker's employment.*

## Trends, 1994/95 to 2003/04

### Number, incidence and frequency rates

Since 1994/95, permanent disability injuries dropped by 5,793 or 29 per cent and temporary disability injuries also dropped by 5,452 or 13 per cent. The number of employment injuries reported in 2003/04 was 51,551, an increase of one per cent over 2002/03.

**Figure 1: Number of claims, incidence and frequency rates 1994/95-2003/04**

### Gross incurred cost and time lost

The total gross incurred cost of employment injuries in 2003/04 increased by one per cent over 2002/03 to \$1,078 million. Although the number of employment injuries has generally declined since 1994/95, the total gross incurred cost has increased, peaking at \$1,294 million in 2001/02. Average and median gross incurred cost followed a similar pattern to the total gross incurred cost during this period (see Figure 2).

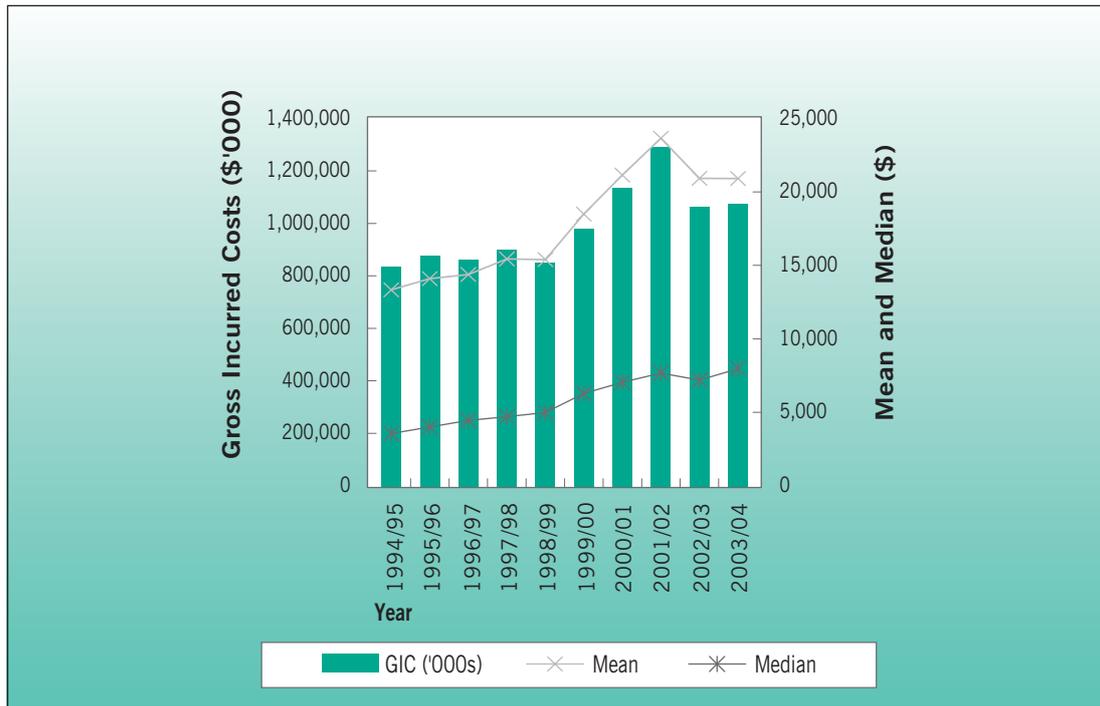

Total time lost for temporary disability injuries decreased from 533,855 weeks in 1997/98 to 355,357 weeks in 2003/04.

<sup>1</sup> Incidence rate is the number of major injuries per 1,000 employees. Frequency rate is the number of employment injuries per million hours worked.

<sup>2</sup> The denominator data to calculate incidence/frequency rates for 2003/04 claims is different from previous years in that it is based on the 2001 census data. The gap in the graph between 2002/03 and 2003/04 is to highlight the fact the 2003/04 rates are not comparable with previous years.

## Employment Injuries

Figure 2: Gross incurred cost 1994/95-2003/04

## Employment injuries 2003/04

## Number, gross incurred cost and time lost

Of the 51,551 employment injuries in 2003/04, 28 per cent resulted in permanent disabilities. Approximately 65 per cent of employment injuries resulted in time lost of less than six months.

A total of 35,031 injuries involved males and included 112 fatalities and 11,074 permanent disability injuries. Males accounted for 78 per cent of permanent disabilities. Of the 16,520 injuries to females, 20 were fatal and 3,184 resulted in permanent disability.

Table 1 shows that of the total gross incurred cost in 2003/04, approximately \$408 million was paid for major employment injuries and \$671 million was estimated for future liabilities. Although the average gross incurred cost in 2003/04 was \$20,918, half the claims in that period resulted in a gross incurred cost of \$7,968 or less.

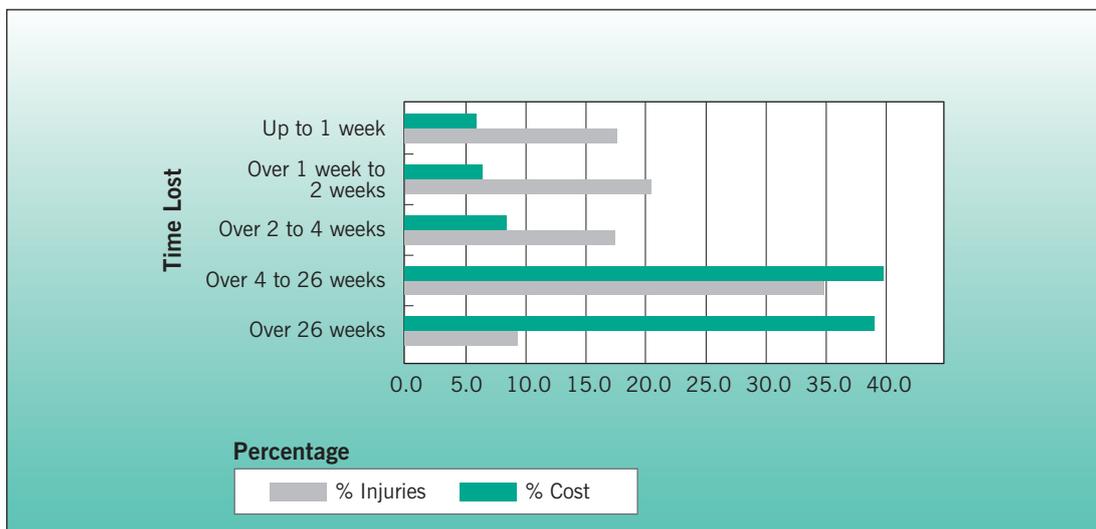

Table 1: Gross incurred cost by nature of occurrence 2003/04

| NATURE OF OCCURRENCE               | Number of claims | Non-compensation payments \$'000 | Compensation payments \$'000 | Total payments \$'000 | Estimate of liability \$'000 | Gross incurred cost \$'000 | Average gross incurred cost \$ |

### Employment Injuries

**Figure 3** shows that temporary disability injuries resulting in over 26 weeks off work accounted for nine per cent of all temporary disability injuries and 39 per cent of the gross incurred cost. In contrast, 18 per cent of temporary disability injuries with up to one week off work accounted for six per cent of the gross incurred cost.

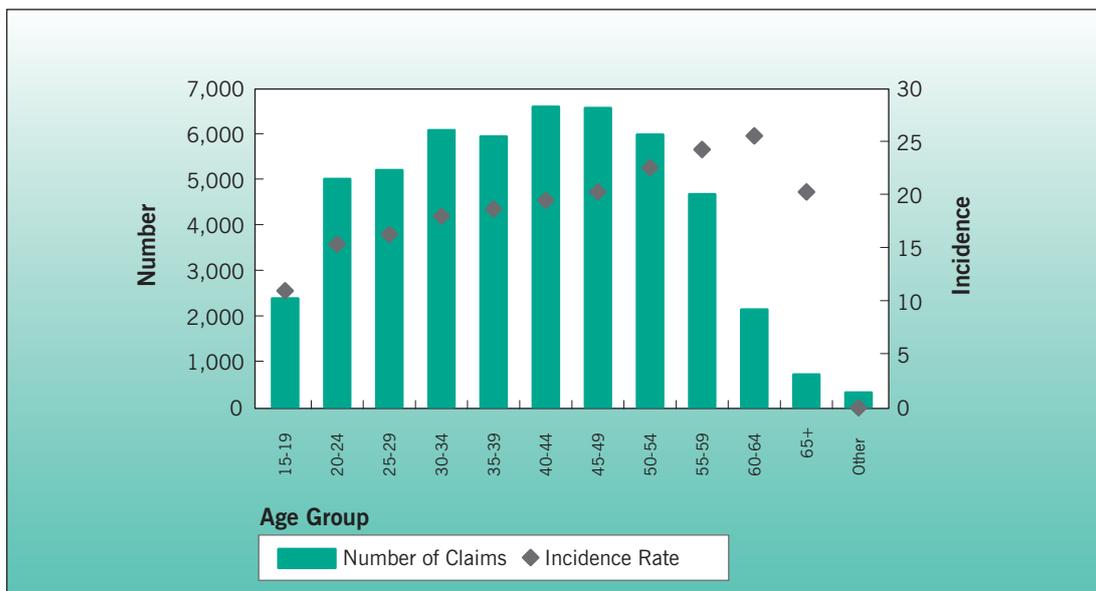

**Figure 3: Number and gross incurred cost by time lost for temporary disabilities 2003/04**

#### Age distribution

Although the highest number of injuries occurred between the ages of 40–49, the highest incidence rate was between the ages of 55–64. The highest number of employment injuries for males was in the 30–34 age group while for females it was in the 45–49 age group.

**Figure 4: Number and incidence rate by age 2003/04**

### Employment Injuries

#### Industry distribution

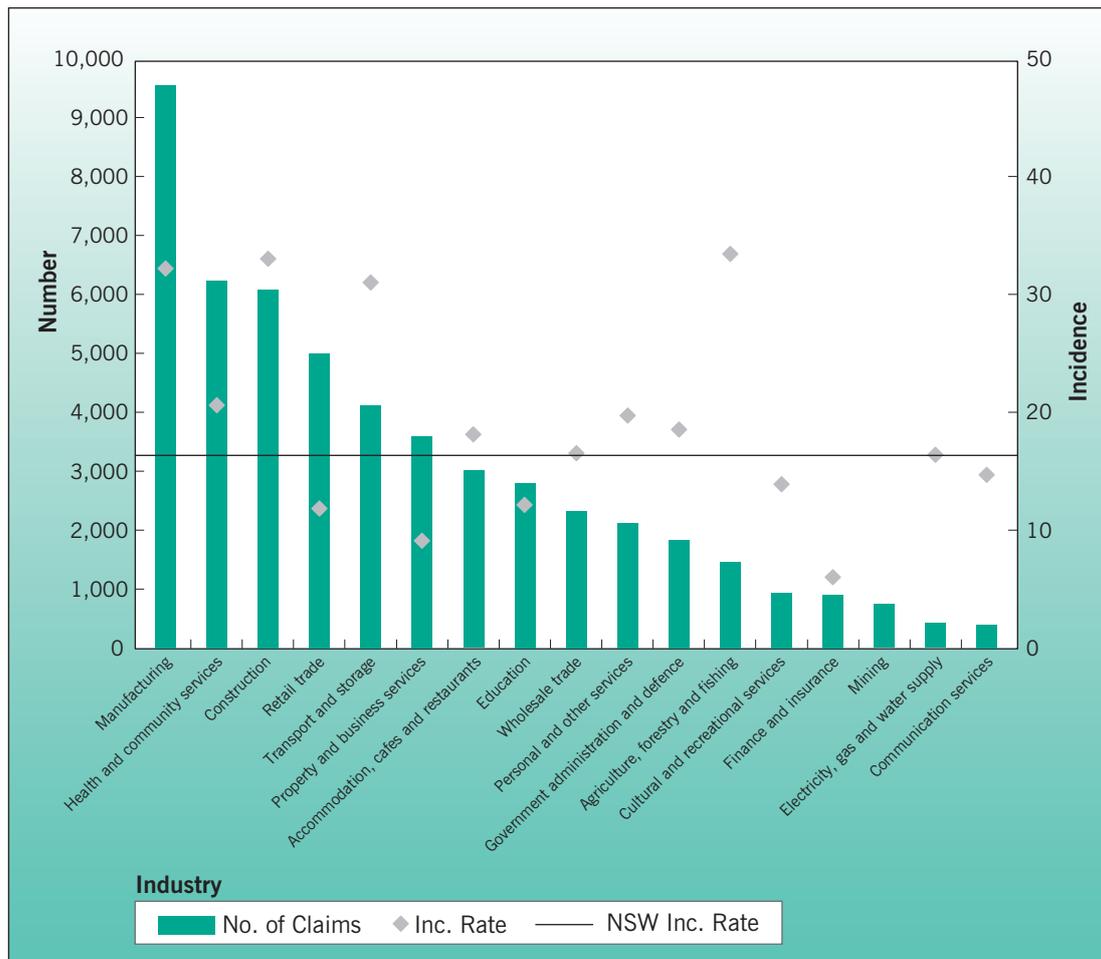

The eight industries shown in Table 2 experienced incidence rates higher than the NSW average for employment injury in 2003/04:

**Table 2: High risk industries**

|  | No. of injuries | Incidence rate |
|--|-----------------|----------------|
| Mining   | 741             | 50.3           |
| Agriculture, forestry and fishing                                  | 1,463           | 33.7           |
| Construction   | 6,078           | 33.3           |
| Manufacturing  | 9,547           | 32.5           |
| Transport and storage  | 4,127           | 31.3           |
| Health and community services                                      | 6,223           | 20.9           |
| Personal and other services  | 2,123           | 20.0           |
| Government administration and defence (does not include Education) | 1,831           | 18.8           |

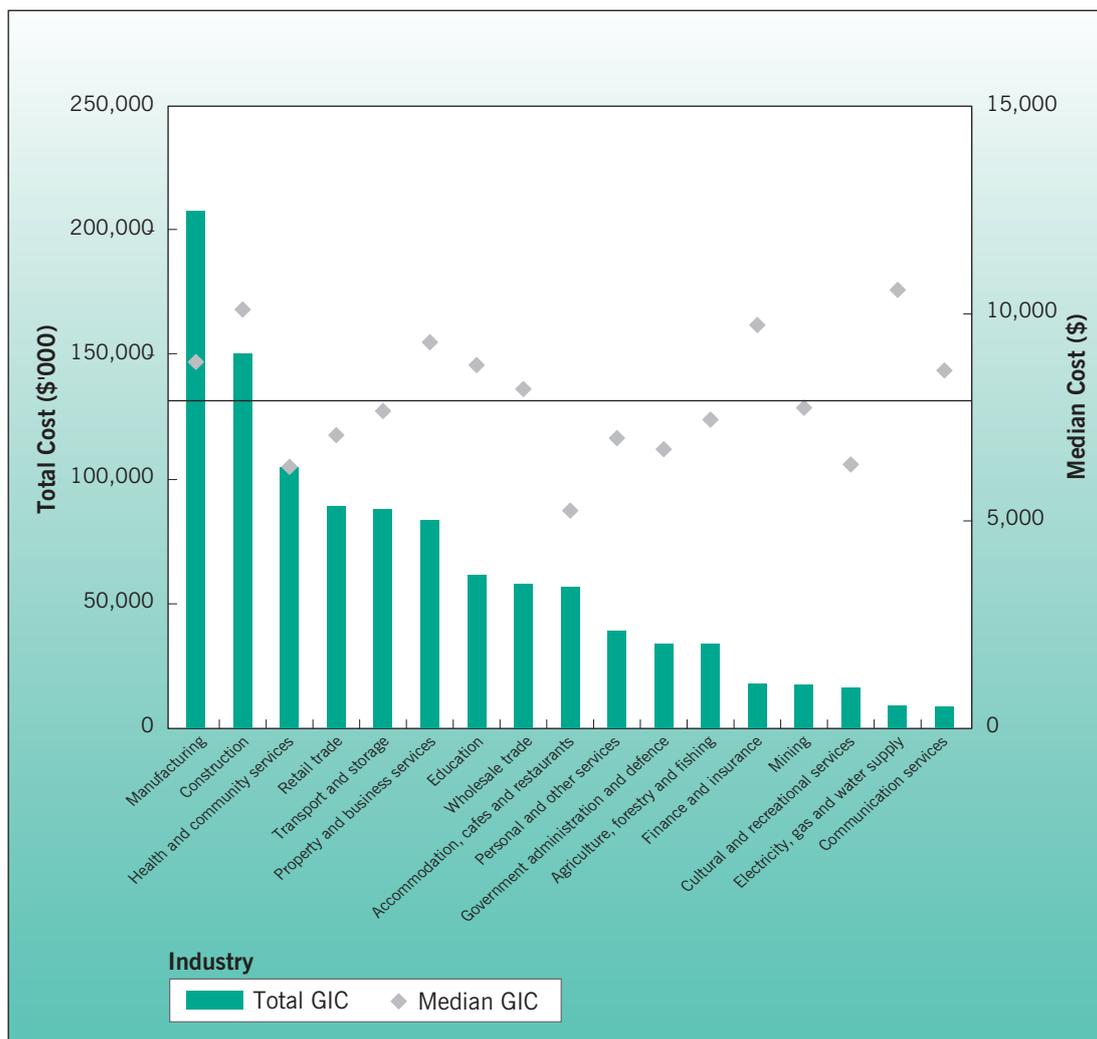

Figures 5 and 6 present the distribution of employment injuries by industry incidence rates and gross incurred cost.

**Figure 5: Number and incidence rate by industry 2003/04**

Employment Injuries

Figure 6: Gross incurred cost by industry 2003/04

Occupation distribution

Three occupational groups accounted for 60 per cent of total gross incurred cost. Figure 8 shows labourers and related workers have the highest gross incurred cost of \$276 million, followed by tradespersons and related workers at \$197 million, and intermediate production and transport workers at \$181 million. Although managers and administrators had the second lowest gross incurred cost and time lost, this group had the highest average gross incurred cost at \$24,505 and median at \$11,059.

The occupational group of labourers and related workers had the highest number of injuries at 12,615 in 2003/04 and the highest incidence rate of 53.2 (see Figure 7). Other groups with incidence rates higher than the 18.7 incidence rate for NSW were intermediate production and transport workers at 8,421 injuries, a 38.1 incidence rate, and tradespersons and related workers at 9,312 injuries, a 31.4 incidence rate.

### Employment Injuries

Figure 7: Number of claims and incidence rate by occupation 2003/04

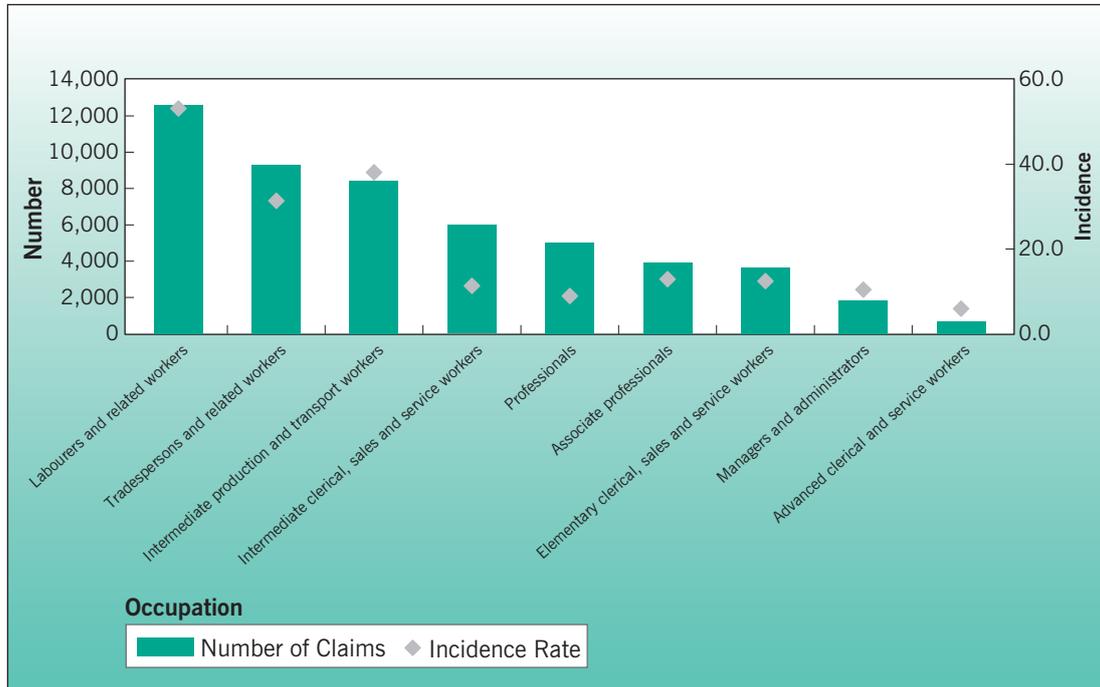

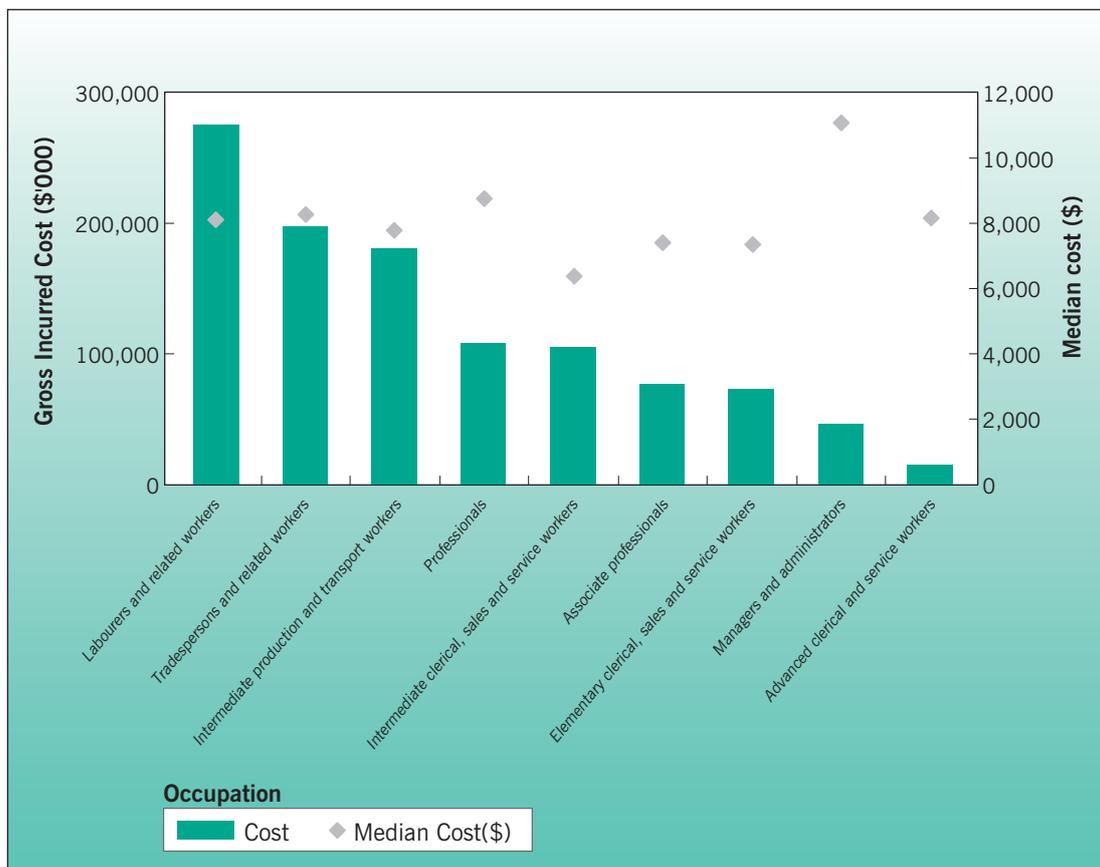

Figure 8: Gross incurred cost by occupation 2003/04

# fatalities

*For a fatality to be included in this section a claim must have been lodged with an insurer in 2003/04. An injury or illness may subsequently result in a death. This section only includes claims where the death occurred during the 2003/04 financial year.*

## Trends, 1987/88 to 2003/04

### Number, incidence and frequency rates

There were 132 employment related fatalities in 2003/04, an incidence rate of 4.8 per 100,000 employees. Both in terms of number and incidence rate, these figures were the lowest since 1987/88.

**Table 3: Fatalities 1987/88 to 2003/04**

| Year    | Number | Incidence rate <sup>1</sup> | Frequency rate <sup>2</sup> |
|---------|--------|-----------------------------|-----------------------------|
| 1987/88 | 209    | 10.9                        |                             |
| 1988/89 | 244    | 12.2                        |                             |
| 1989/90 | 210    | 9.9                         |                             |
| 1990/91 | 233    | 11.2                        |                             |
| 1991/92 | 177    | 8.7                         | .05                         |
| 1992/93 | 156    | 7.6                         | .04                         |
| 1993/94 | 185    | 8.9                         | .05                         |
| 1994/95 | 177    | 8.0                         | .05                         |
| 1995/96 | 181    | 7.9                         | .05                         |
| 1996/97 | 173    | 7.5                         | .04                         |
| 1997/98 | 181    | 7.8                         | .05                         |
| 1998/99 | 163    | 6.8                         | .04                         |
| 1999/00 | 181    | 7.2                         | .04                         |
| 2000/01 | 139    | 5.2                         | .03                         |
| 2001/02 | 177    | 6.6                         | .04                         |
| 2002/03 | 136    | 4.9                         | .03                         |
| 2003/04 | 132    | 4.8                         | .03                         |

- 1 Incidence rate is the number of fatalities per 100,000 employees.
- 2 Frequency rate is the number of fatalities per million hours worked. Denominator data to calculate frequency rates for 1987/88 to 1990/91 are not available.

### Fatalities

Figure 9: Number of fatalities and incidence rate 1987/88 to 2003/04<sup>1</sup>

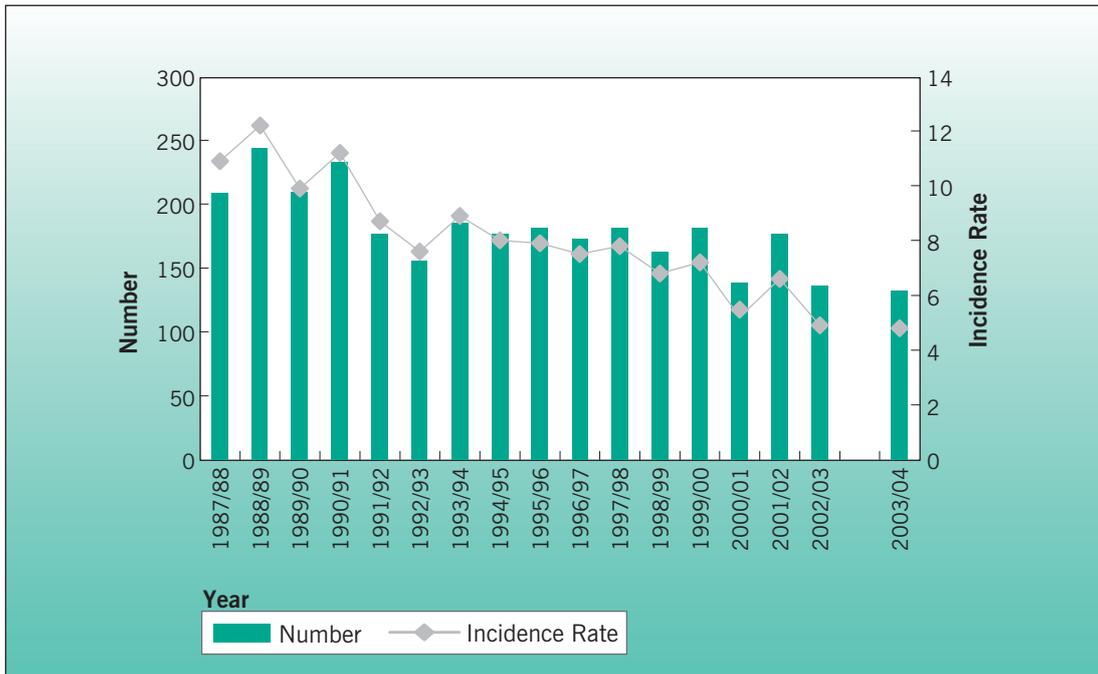

Figure 10 shows that the proportion of workplace fatalities has decreased by 22 per cent since 2001/02. In contrast, the proportion of other work-related fatalities has increased by 27 per cent over the same period.

Figure 10: Percentage of fatalities by nature of occurrence 1987/88 to 2003/04

Note that the denominator data to calculate incidence/frequency rates for 2003/04 claims is different from previous years in that it is based on the 2001 census data. The gap in the graph between 2002/03 and 2003/04 is to highlight the fact the 2003/04 rates are not comparable with previous years.

<sup>1</sup> Note that the denominator data to calculate incidence/frequency rates for 2003/04 claims is different from previous years in that it is based on the 2001 census data. The gap in the graph between 2002/03 and 2003/04 is to highlight the fact the 2003/04 rates are not comparable with previous years.

## Fatalities

### Fatality claims, 2003/04

A total of 132 employment related fatalities were reported to insurers in 2003/04:

- 39 fatalities or 29 per cent, occurred at the workplace
- 27 or 20 per cent were occupational diseases
- 25 or 19 per cent were road traffic accidents while the worker was on duty
- 40 or 30 per cent were commuting accidents
- one fatality occurred away from work during a recess.

Males accounted for 112 or 85 per cent of fatalities.

### Industry

Industries with rates above the NSW fatality incidence rate are listed in Table 4.

**Table 4: Industries above the NSW fatality incidence rate**

|                                   | Number | Incidence rate <sup>2</sup> |
|-----------------------------------|--------|-----------------------------|
| Mining                            | 4      | 27.2                        |
| Transport and storage             | 23     | 17.4                        |
| Agriculture, forestry and fishing | 7      | 16.1                        |
| Construction                      | 19     | 10.4                        |
| Electricity, gas and water supply | 2      | 7.8                         |
| Communication services            | 2      | 7.6                         |
| Wholesale trade                   | 9      | 6.5                         |
| Manufacturing                     | 19     | 6.5                         |
| NSW incidence rate                |        | 4.8                         |

### Occupation

Intermediate production and transport workers had the highest number of fatalities at 35 and the highest incidence rate of 15.8.

Labourers and related workers had the second highest number of fatalities at 32 with an incidence rate of 13.5.

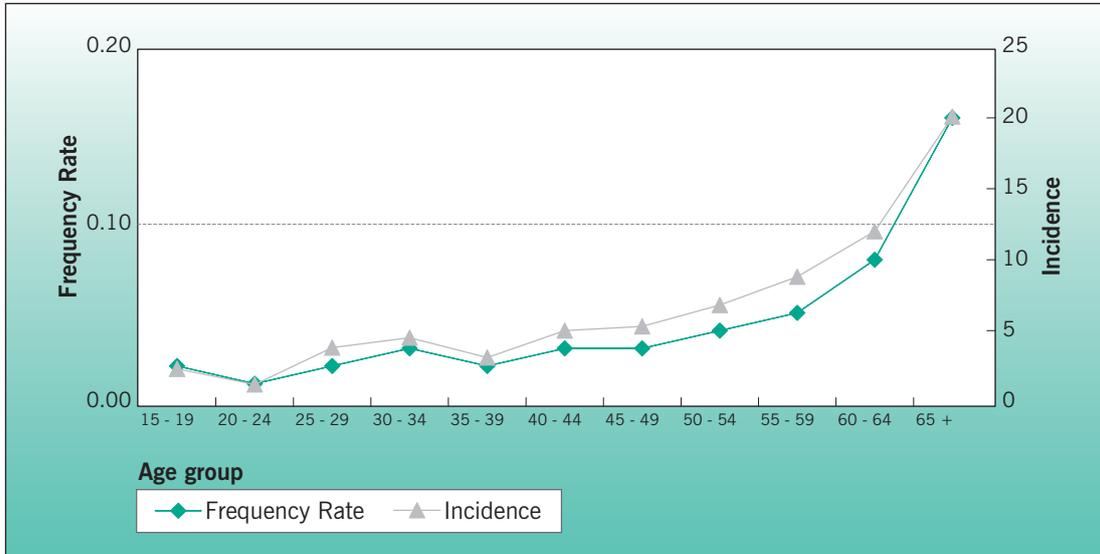

### Age

During 2003/04, the highest number of work related fatalities (18) occurred in the 50–54 age group followed by the 55–59 (17). The 45–49 and 40–44 age groups had 16 fatalities each. Employees less than 25 years of age accounted for seven per cent of all fatalities. The highest incidence rate of 20.1 and frequency rate of 0.16 were recorded for the 65+ age group. Figure 11 shows a direct link between age and incidence and frequency rates for the over 35 years age groups.

While fatality incidence rate gradually increased from 3.1 to 6.8 for the 40–54 age group, the increase was more pronounced for the 55+ age groups, ranging from 6.8 for the 55-59 year age group to 20.1 for the 65+.

### Fatalities

Figure 11: Fatalities by age 2003/04

#### Younger workers

There were nine fatalities involving employees under the age of 25. Only one of these was female. Vehicle accidents were the most common fatal injury and accounted for eight claims.

#### Fatalities, 1994/95 to 2003/04

A total of 1,640 fatalities were reported during the 10 years from 1994/95 to 2003/04. Of these, 578 resulted from workplace injuries, 705 from other work-related injuries and 355 from occupational diseases.

#### Workplace fatalities

Industry distribution of the 578 workplace fatalities over the 10 year period is given in Figure 12.

Figure 12: Workplace fatalities by industry 1994/95 to 2003/04

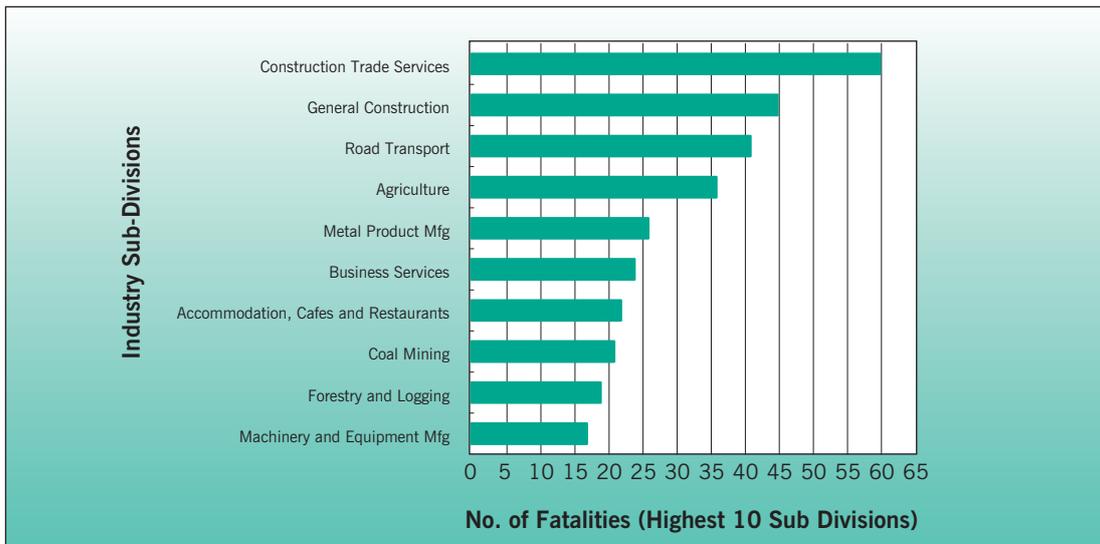

Table 5: Workplace fatalities by mechanism and agency 1994/95 to 2003/04

| Mechanism                 | Agent          |                     |                |                             |                         |                             |               |            | Total      |
|---------------------------|----------------|---------------------|----------------|-----------------------------|-------------------------|-----------------------------|---------------|------------|------------|
|                           | Road transport | Outdoor environment | Human agencies | Other materials and objects | Electrical installation | Conveyors and lifting plant | Air transport | Other      |            |
| Hit by moving objects     | 20             | 4                   | 12             | 9                           | -                       | 10                          | -             | 63         | 118        |
| Vehicle accident          | 40             | 5                   | -              | -                           | -                       | 2                           | 26            | 16         | 89         |
| Hit by falling objects    | 2              | 13                  | -              | 25                          | -                       | 9                           | -             | 23         | 72         |
| Falls from a height       | 4              | 20                  | 1              | 1                           | -                       | 1                           | 4             | 41         | 72         |
| Contact with electricity  | -              | -                   | -              | -                           | 33                      | 1                           | -             | 6          | 40         |
| Trapped by moving objects | 3              | -                   | 1              | -                           | -                       | 3                           | -             | 28         | 35         |
| Slide or cave-in          | 1              | 1                   | -              | -                           | -                       | -                           | -             | 17         | 19         |
| Other                     | 8              | 12                  | 23             | 2                           | 1                       | 5                           | -             | 82         | 133        |
| <b>Total</b>              | <b>78</b>      | <b>55</b>           | <b>37</b>      | <b>37</b>                   | <b>34</b>               | <b>31</b>                   | <b>30</b>     | <b>276</b> | <b>578</b> |

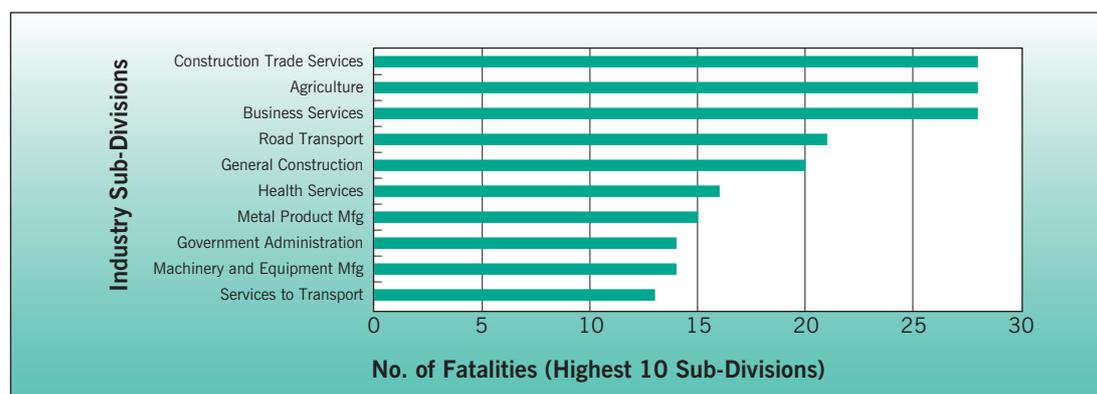

The most common mechanism of fatality was 'being hit by moving objects' 118, followed by 'vehicle accidents' 89.

**Occupational disease fatalities**

A total of 355 occupational disease fatalities were reported during the 10-year period. Manufacturing, construction, and transport and storage together accounted for 44 per cent of all occupational disease fatalities (see Figure 13).

Males accounted for 92 per cent of occupational disease fatalities. Of these, 52 per cent resulted from ischaemic heart disease. Asbestosis, mesothelioma and cerebrovascular disease each caused five per cent of disease fatalities.

Figure 13 Occupational disease fatalities by industry 1994/95 to 2003/04

**Other work-related fatalities**

A total of 705 other work-related fatalities were reported during the 10-year period. Of these, 455 or 65 per cent occurred while travelling to and from work. 236 of these were road traffic accidents.

The industries with the highest number of other work-related fatalities were road transport at 83, business services at 53, construction trade services at 43 and general construction at 38.

# workplace injuries

*Workplace injury refers to an accident at the workplace, either during work or a work break, and when the worker's activity is under the control of an employer. Also included in this category are injuries that occurred while the employee was working at a location other than their normal workplace or base of operations.*

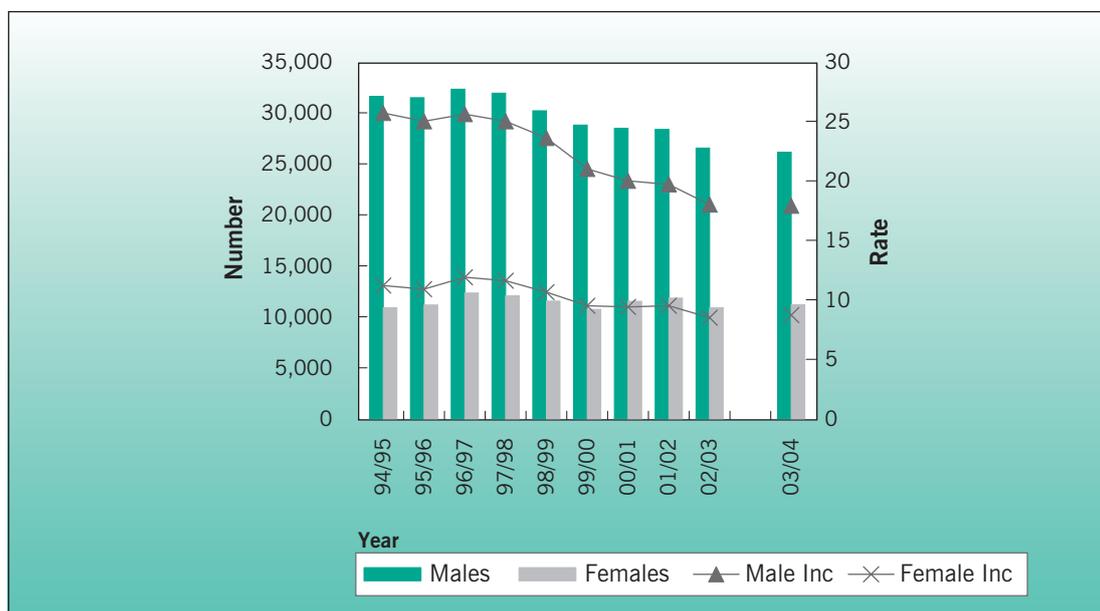

## Trends, 1994/95 to 2003/04

The incidence of workplace injuries has continued to decline over the past 10 years and is now at its lowest rate of 13.6 (see Figure 14). A total of 37,330 workplace injuries were reported in 2003/04, a decrease of 0.2 per cent on 2002/03 (see Figure 15).

Figure 14: Number, incidence and frequency rates 1994/95–2003/04

Figure 15: Number and incidence by gender 1994/95–2003/04<sup>1</sup>

## Workplace Injuries

Table 6: Number of workplace injuries by gender 1994/95–2003/04

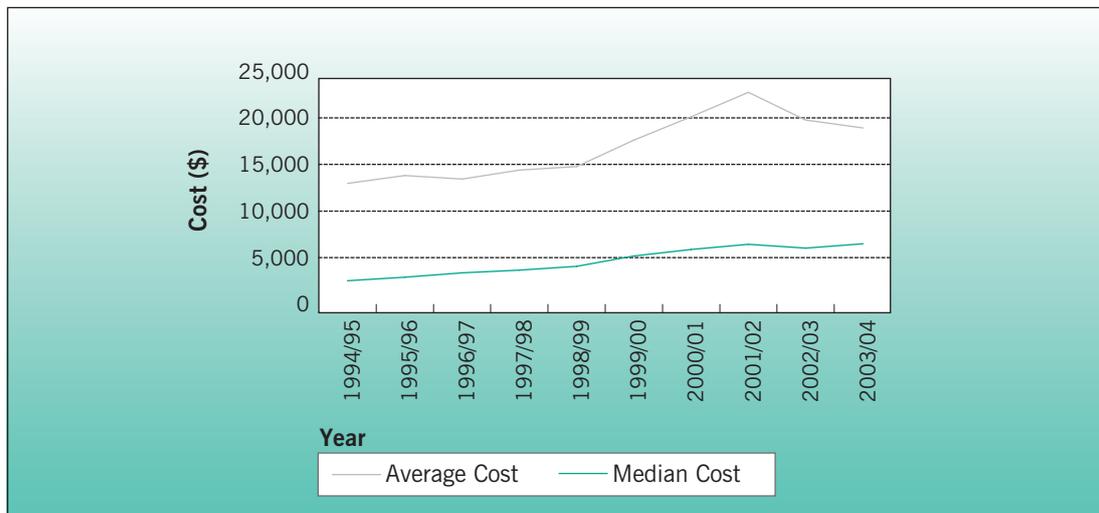

|                                      | 1994/95 | 1995/96 | 1996/97 | 1997/98 | 1998/99 | 1999/00 | 2000/01 | 2001/02 | 2002/03 | 2003/04 |
|--------------------------------------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|
| <b>Males</b>                         | 31,611  | 31,483  | 32,318  | 31,925  | 30,200  | 28,798  | 28,477  | 28,376  | 26,541  | 26,137  |
| <b>Females</b>                       | 10,893  | 11,162  | 12,336  | 12,057  | 11,539  | 10,733  | 11,518  | 11,828  | 10,881  | 11,193  |
| <b>Total</b>                         | 42,505  | 42,648  | 44,654  | 43,982  | 41,739  | 39,531  | 39,995  | 40,204  | 37,422  | 37,330  |
| <b>Percentage of male injuries</b>   | 74.4    | 73.8    | 72.4    | 72.6    | 72.4    | 72.8    | 71.2    | 70.6    | 70.9    | 70.0    |
| <b>Percentage of female injuries</b> | 25.6    | 26.2    | 27.6    | 27.4    | 27.6    | 27.2    | 28.8    | 29.4    | 29.1    | 30.0    |

**Gross incurred cost**

The total gross incurred cost of workplace injuries rose by 28 per cent from \$552 million to \$706 million during the 10 years from 1994/95 to 2003/04. During this period, average gross incurred cost rose from \$12,975 in 1994/95 to \$18,913 in 2003/04, a 46 per cent increase. Median gross incurred cost increased by 157 per cent from \$2,524 to \$6,487 (see Figure 16).

The increase in gross incurred cost over the last 10 years was mainly due to a rise in the number of permanent disabilities from 7,203 in 1994/95 to 9,137 in 2003/04. In comparison, the number of temporary disabilities declined by 20 per cent from 35,232 in 1994/95 to 28,154 in 2003/04.

Figure 16: Average and median gross incurred cost of workplace injuries 1994/95–2003/04

**Workplace injuries, 2003/04****Number, incidence and frequency rates**

A total of 37,330 workplace injuries accounted for 72 per cent of all employment injuries. Although the incidence rate of workplace injuries of 13.6 in 2003/04 was the same as 2002/03, the frequency rate of 8.1 showed an increase of 0.2 per cent over 2002/03. This may be explained by the fact that according to the ABS Labour Force Survey, the average worker in NSW worked 27 hours less in 2003/04 compared to 2002/03.

Male injuries comprised 70 per cent of all workplace injuries.

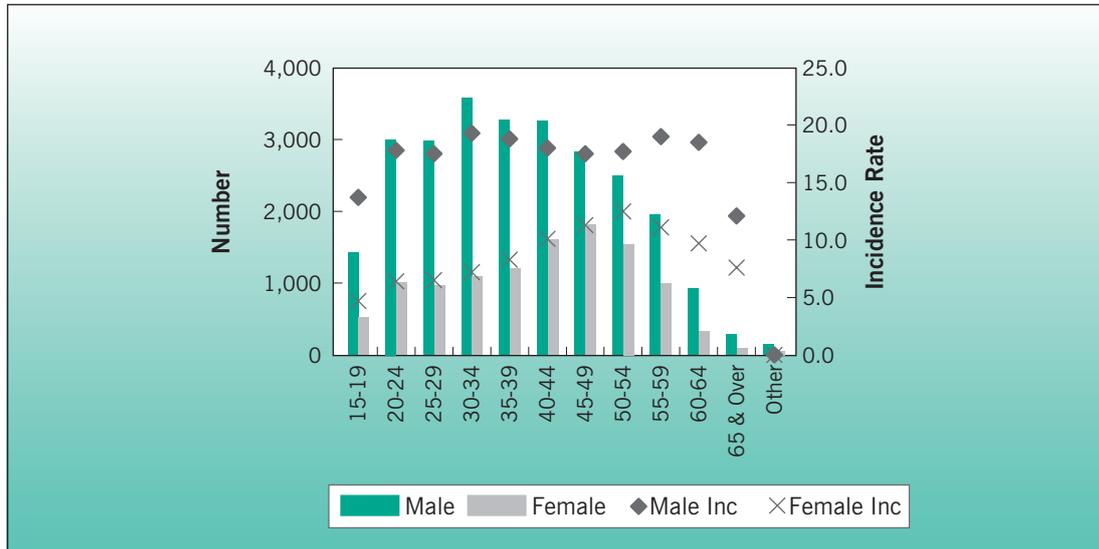

<sup>1</sup> The denominator data used to calculate incidence/frequency rates for 2003/04 claims is based on the 2001 census data and is different from previous years. The gap in the graph between 2002/03 and 2003/04 highlights the fact the 2003/04 rates are not comparable with previous years.

<sup>2</sup> Total figures include cases in which gender was not stated.

Workplace Injuries

Figure 17 shows that the highest incidence of workplace injuries for males was in the 30–34 year age group with 19.3 per 1000 employees, followed by the 55–59 year age group of 19.0. For females, the highest incidence group was the 50–54 year age group with an incidence rate of 12.5, followed by the 45–49 year age group with an incidence rate of 11.3.

Figure 17: Number of workplace injuries and incidence rate by age 2003/04

Severity of injury

There were 39 workplace fatalities involving 36 males and 3 females, 9,137 permanent disabilities and 28,154 temporary disability injuries during 2003/04.

While only 24 per cent of workplace injury cases involved permanent disabilities, they were responsible for 59 per cent of all workplace injury gross incurred costs. The most common types of permanent workplace injuries were sprains and strains at 61 per cent, followed by fractures at 17 per cent.

Eight per cent of temporary disability injuries involved time lost of six months or more. The most common types of injury in this group were sprains and strains at 76 per cent. For temporary disability injuries involving time lost of less than six months, again the most common injuries were sprains and strains at 64 per cent and open wounds at 11 per cent.

Males accounted for 76 per cent of permanent injuries and 68 per cent of temporary disability injuries.

Gross incurred cost and time lost

The gross incurred cost for workplace injuries was \$706 million in 2003/04, a four per cent decrease since 2002/03. On average, the cost incurred per injury was \$18,913, with half these costing \$6,487 or less. The gross incurred cost for male injuries was \$511 million and accounted for 72 per cent of the gross incurred cost for workplace injuries.

A total of 230,261 weeks of time were lost as a result of workplace injuries in 2003/04, with an average of eight weeks per case. The total time lost for injuries to males was 147,959 weeks. As expected, long-term injuries of over four weeks resulted in higher costs. Figure 18 shows the relationship between the duration of temporary disability injuries and gross incurred cost.

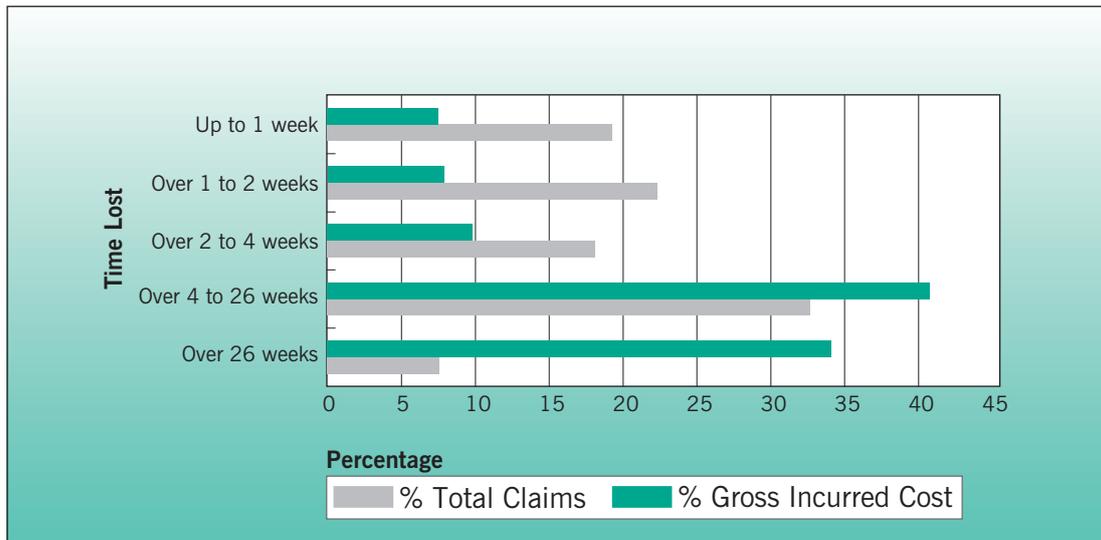

Occupations that incurred the highest gross incurred cost were labourers and related workers at \$199 million, trades persons and related workers at \$141 million, and intermediate production and transport workers at \$131 million.

The 45–49 year age group recorded the highest cost of injuries at \$100 million with time lost of 30,142 weeks. The average time lost for this age group was nine weeks, with half at three weeks or less. The average gross incurred cost of these cases was \$21,618, 14 per cent above the average for all workplace cases.

<sup>1</sup> See section 2 for a breakdown of fatalities by nature of occurrence.

## Workplace Injuries

Figure 18: Temporary disability injuries and gross incurred cost by time lost 2003/04

## Industry distribution

Industries with a high incidence rate of workplace injury were mining at 35.2, followed by agriculture, forestry and fishing at 28.3, construction at 25.2, and manufacturing at 24. These incidence rates were above the overall rate of 13.6 recorded for all industries.

During 2003/04, the manufacturing industry recorded the highest number of workplace injuries at 7,028, representing 19 per cent of all workplace injuries. Other industries with high levels of injuries were construction with 4,605, health and community services with 4,403 and retail trade with 3,929. Together, these four industry groups accounted for 53 per cent of all workplace injuries. Figure 19 shows the top 10 industries.

The following industries had the highest incidences of male injuries:

Table 7: Industries with high incidence rates of male injuries

|                                   | Incidence | Number | Percentage of claims |
|-----------------------------------|-----------|--------|----------------------|
| Mining                            | 36.5      | 501    | 93.3                 |
| Agriculture, forestry and fishing | 33.8      | 1,055  | 71.7                 |
| Manufacturing                     | 28.8      | 6,064  | 71.8                 |
| Transport and storage             | 28.2      | 2,721  | 73.1                 |
| Construction                      | 27.7      | 4,489  | 88.8                 |

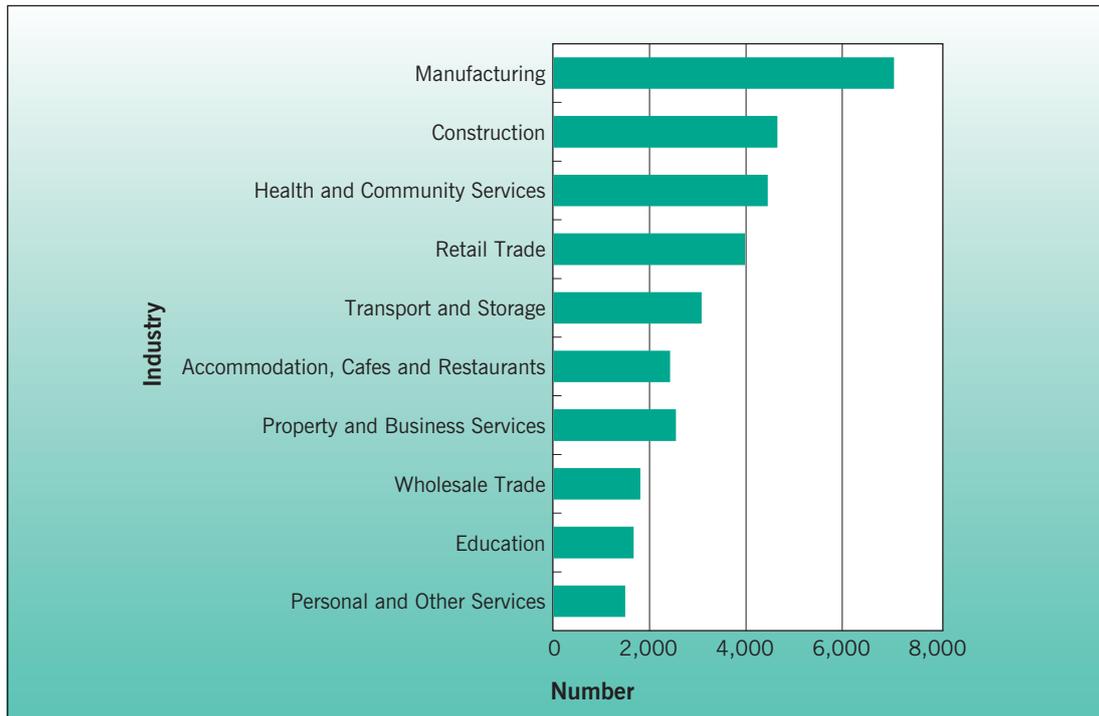

The following industries had the highest incidence rates of injuries to females:

Table 8: Industries with high incidence rates of injuries to females

|                                      | Incidence | Number | Percentage of claims |
|--------------------------------------|-----------|--------|----------------------|
| Mining                               | 17.3      | 17     | 6.7                  |
| Health and community services        | 14.7      | 3,437  | 78.8                 |
| Agriculture, forestry and fishing    | 14.2      | 174    | 28.3                 |
| Accommodation, cafes and restaurants | 12.1      | 1,141  | 57.7                 |
| Transport and storage                | 8.6       | 306    | 26.9                 |

Workplace Injuries

Figure 19: Number of workplace injuries in top 10 industries 2003/04

Occupation distribution

Labourers and related workers recorded the highest number of workplace injuries at 9,823 during 2003/04, representing 26 per cent of all workplace injuries. This occupation group also recorded the highest incidence rates of injuries at 41.4.

Other occupations with a high incidence rate were intermediate production and transport workers at 28.6, and tradespersons and related workers at 24.2. These incidences were higher than the 13.6 rate recorded for all occupation groups.

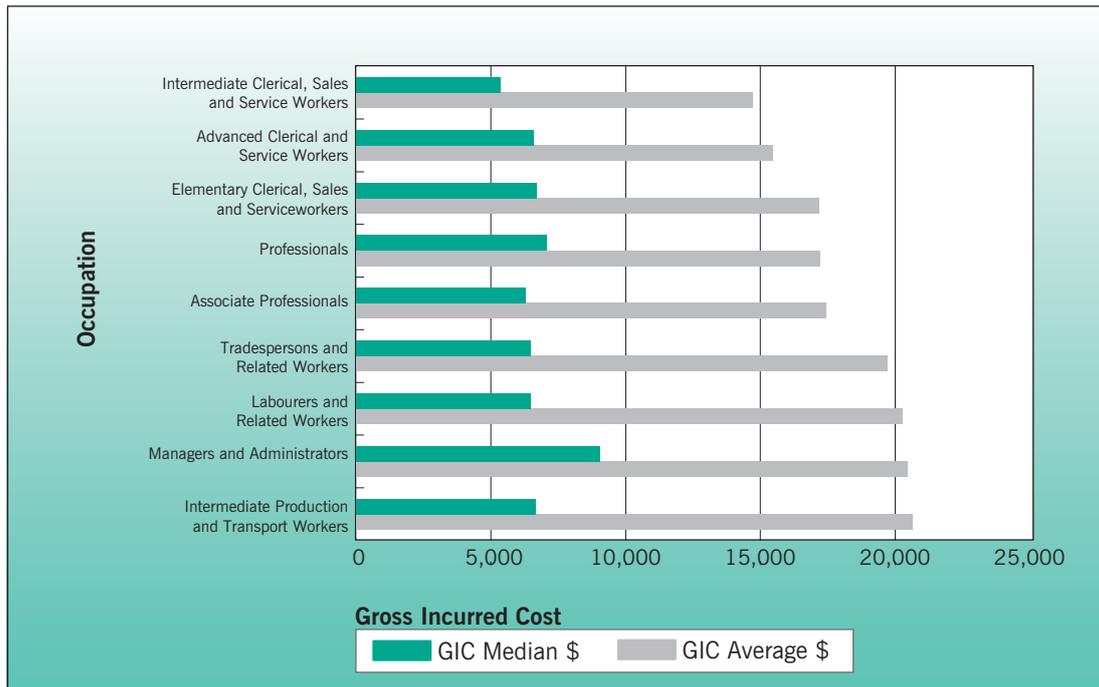

Again, the highest frequency rate for occupation groups was labourers and related workers at 28.9. Other high-risk occupations were intermediate production and transport workers at 15.3 and tradespersons and related workers at 12.4. The frequency rates of these three groups were well above the 8.1 rate recorded for all occupation groups.

Table 9: The first 10 occupation groups with highest incidence rates

|   | Incidence | Frequency rate |
|---|-----------|----------------|
| Other labourers and related workers                 | 53.0      | 36.9           |
| Skilled agricultural and horticultural workers      | 42.7      | 25.0           |
| Factory labourers                                   | 36.4      | 21.9           |
| Health and welfare associated professionals         | 36.0      | 23.0           |
| Road and rail transport drivers                     | 35.6      | 17.3           |
| Intermediate machine operators                      | 35.3      | 19.0           |
| Food tradespersons                                  | 29.9      | 17.1           |
| Farmers and farm managers                           | 29.0      | 11.3           |
| Other intermediate production and transport workers | 29.0      | 18.1           |
| Construction tradespersons                          | 28.7      | 14.0           |

## Workplace Injuries

Figure 20: Average and median gross incurred cost by occupation 2003/04

### Common injuries

Over 63 per cent of workplace injuries resulted in sprains and strains, costing \$476 million in 2003/04. Other common injuries were open wounds, contusions and crushing, and fractures.

The most common agencies of injuries were other materials and objects at 10 per cent, fastening, packing and packaging equipment at 10 per cent, and outdoor environment at 8 per cent.

Manual handling was the most common cause of injury at 33 per cent, followed by falls on the same level at 15 per cent, and falls from a height at 8 per cent. Detailed data by industry divisions are shown in the Appendix E tables 3.5(a) to 3.5(r).

### Back injuries

There were 10,540 workplace back injuries in 2003/04, representing 28 per cent of all workplace injuries.

Workplace back injuries decreased by 3 per cent in 2003/04 over 2002/03. In addition, the gross incurred cost of back injury claims dropped significantly from 2001/02 to 2002/03. Although the proportion of back injuries to all injuries has been stable at around 30 per cent of all workplace injuries over the last 10 years, there has been a gradual decline in incidence figures over the last seven years since 1996/97.

Back injuries cost \$216 million and involved lost time of 75,847 weeks. In 2003/04, 67 per cent of back injuries occurred to males.

Of all workplace back injuries, permanent disability injuries accounted for 19 per cent. 95 per cent of all permanent disability involved sprains and strains. Other injuries included fractures and contusions.

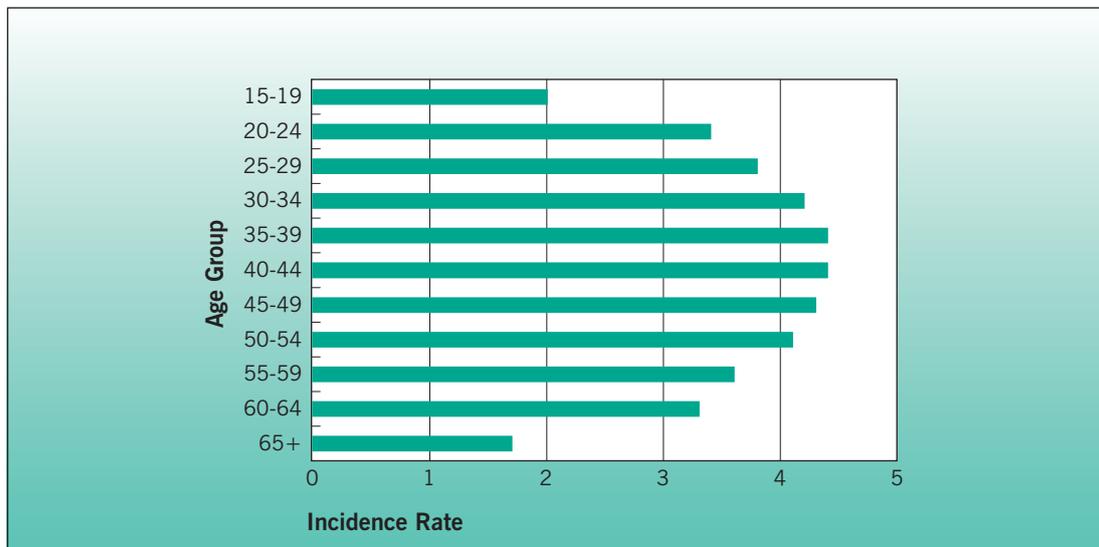

The highest number of back injuries was in the 40–44 year age group, with 14 per cent of claims and 14 per cent of the gross incurred cost. 80 per cent of these injuries involved temporary disabilities (see Figure 21).

Workplace Injuries

Table 10: Workplace back injuries 1994/95-2003/04

| Year    | Number | % of total | Frequency rate | Incidence rate | Gross incurred cost (\$'000) |
|---------|--------|------------|----------------|----------------|------------------------------|
| 1994/95 | 12,986 | 30.6       | 3.3            | 5.9            | 198,781                      |
| 1995/96 | 13,121 | 30.8       | 3.3            | 5.8            | 212,489                      |
| 1996/97 | 13,720 | 30.7       | 3.4            | 6.0            | 215,841                      |
| 1997/98 | 13,268 | 30.2       | 3.3            | 5.7            | 224,115                      |
| 1998/99 | 12,439 | 29.8       | 2.9            | 5.2            | 203,039                      |
| 1999/00 | 11,466 | 29.0       | 2.5            | 4.6            | 219,968                      |
| 2000/01 | 12,033 | 30.1       | 2.6            | 4.5            | 269,913                      |
| 2001/02 | 11,668 | 29.0       | 2.5            | 4.3            | 302,751                      |

| 2003/04 | 10,540 | 28.2       | 2.3            | 3.8            | 216,143                      |

Figure 21: Incidence rate of back injuries by age group 2003/04

Manual handling injuries

There were 12,360 manual handling injuries in 2003/04, a three per cent increase on 2002/03.

Manual handling injuries in 2003/04 cost \$244 million and involved 84,420 weeks in time lost. The proportion of workplace manual handling injuries from all workplace injuries in 2003/04 was 32 per cent for males and 36 per cent for females. Manual handling injuries to males increased two per cent over 2002/03, while for females it increased five per cent. The breakdown in gross incurred cost for males was \$169 million, while for females it was \$75 million.

The principal agencies involved in manual handling cases were crates, cartons and boxes at 1,965 and other persons at 1,191. Together, these two categories accounted for a quarter of all manual handling claims.

## Workplace Injuries

Table 11: Workplace manual handling injuries 1994/95–2003/04

| Year    | Number | Percentage of all workplace injuries | Frequency rate | Incidence rate | Gross incurred cost (\$'000) |
|---------|--------|--------------------------------------|----------------|----------------|------------------------------|
| 1994/95 | 13,895 | 32.7                                 | 3.6            | 6.3            | 186,855                      |
| 1995/96 | 14,076 | 33.0                                 | 3.5            | 6.2            | 212,353                      |
| 1996/97 | 15,031 | 33.7                                 | 3.7            | 6.5            | 219,590                      |
| 1997/98 | 14,736 | 33.5                                 | 3.6            | 6.3            | 225,590                      |
| 1998/99 | 14,112 | 33.8                                 | 3.3            | 5.9            | 226,238                      |
| 1999/00 | 13,388 | 33.9                                 | 3.0            | 5.4            | 255,712                      |
| 2000/01 | 13,831 | 34.6                                 | 3.0            | 5.2            | 302,080                      |
| 2001/02 | 13,599 | 33.8                                 | 3.0            | 5.1            | 342,529                      |
| 2002/03 | 12,021 | 32.1                                 | 2.6            | 4.4            | 253,738                      |
| 2003/04 | 12,360 | 33.1                                 | 2.7            | 4.5            | 244,036                      |

**Violence**

Violence related injuries are defined as a physical injury when the injury is caused by 'assault by a person or persons'.

715 injuries during 2003/04 involved physical violence. It is an increase of 337 over the previous year, which reflects changes to the classification system.

Violence related injuries form only a small proportion of workplace injuries. Violence related injuries cost \$14 million, representing two per cent of total gross incurred cost and involving 7,008 weeks in time lost. The most common injuries involved sprains and strains, contusions, and fractures.

# occupational diseases

*Occupational diseases are claims for diseases contracted or aggravated in the course of employment and to which employment was a contributing factor.*

## Occupational disease claims, 1994/95 to 2003/04

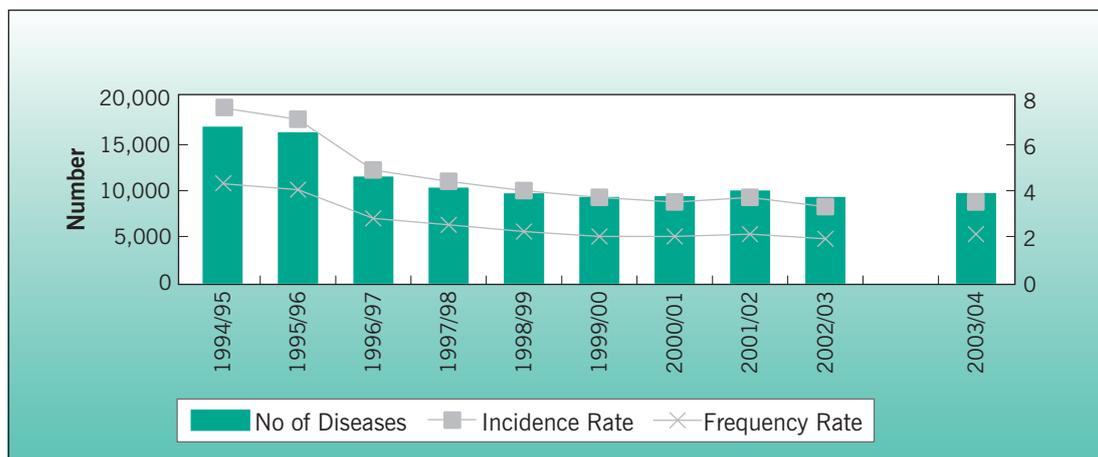

### Number, incidence and frequency rates

There were 9,604 occupational diseases reported in 2003/04, representing 19 per cent of all employment injuries. The proportion of occupational diseases, compared with all employment related injuries, has decreased from 26.8 per cent in 1994/95 to 18.6 per cent in 2003/04 (see Table 12 and Figure 22).

Table 12: Occupational disease claims 1994/95 to 2003/04

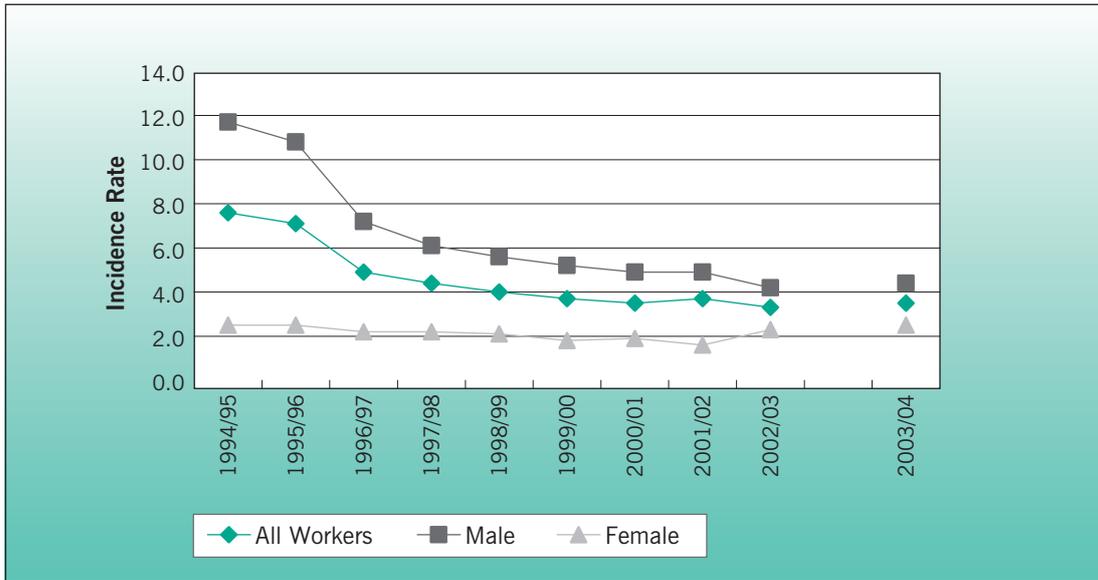

| Year    | No. of occupational diseases | No. of employment injuries | Percentage of all employment injuries |
|---------|------------------------------|----------------------------|---------------------------------------|
| 1994/95 | 16,811                       | 62,840                     | 26.8                                  |
| 1995/96 | 16,211                       | 62,469                     | 26.0                                  |
| 1996/97 | 11,394                       | 60,109                     | 19.0                                  |
| 1997/98 | 10,176                       | 58,604                     | 17.4                                  |
| 1998/99 | 9,567                        | 55,492                     | 17.2                                  |
| 1999/00 | 9,169                        | 53,224                     | 17.2                                  |
| 2000/01 | 9,258                        | 53,797                     | 17.2                                  |
| 2001/02 | 9,878                        | 54,674                     | 18.1                                  |
| 2002/03 | 9,157                        | 51,000                     | 18.0                                  |
| 2003/04 | 9,604                        | 51,551                     | 18.6                                  |

Figure 22: Number of disease claims, incidence and frequency rates 1994/95 to 2003/04

### Occupational Diseases

Figure 23: Incidence rate of occupational diseases by gender 1994/95 to 2003/04

#### Gross incurred cost and time lost

In 2003/04, the gross incurred cost for all occupational diseases increased by eight per cent to \$242 million. The average gross incurred cost for an occupational disease claim in 2003/04 was \$25,164.

In 2003/04, the total time lost was 93,750 weeks off work and the average time lost was 16.9 weeks.

Figure 24: Total gross incurred cost and time lost for occupational diseases 1994/95–2003/04

### Occupational diseases 2003/04

#### Time lost

The total lost time due to occupational diseases was 93,750 weeks, an average of 16.9 weeks per claim. 59 per cent of occupational disease claims were temporary disabilities, half of these resulted in 6.6 weeks or less off work. A further 64 per cent of these claims were over four weeks and accounted for 90 per cent of lost time (see Figure 25).

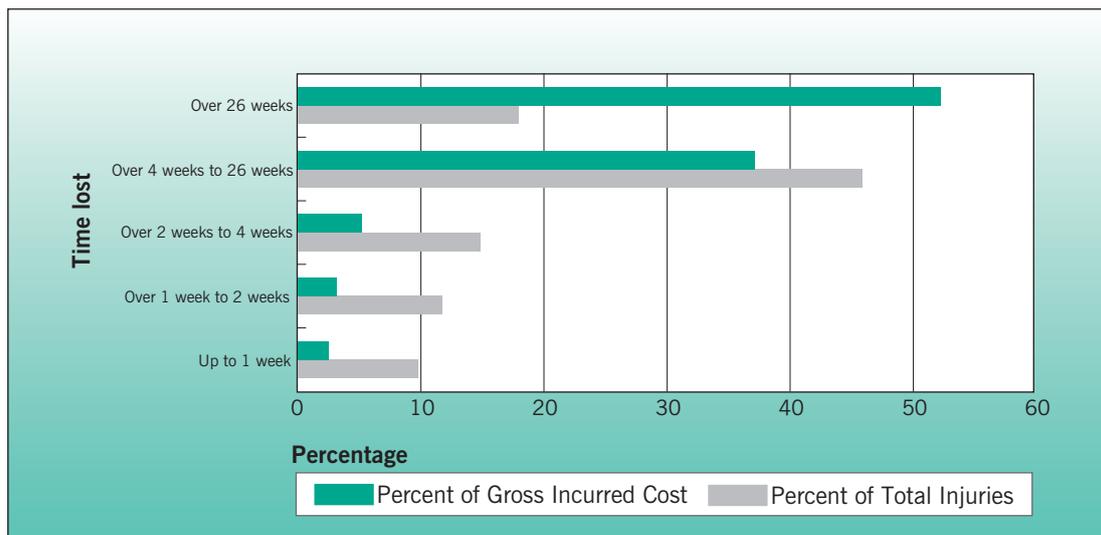

### Nature of diseases

The number of mental disorder claims in 2003/04 decreased by 0.6 per cent in contrast to increases over the preceding three reporting periods. The jump that was seen from 2001/02 to 2002/03 may be the result of changes to the classification system.

A high proportion of occupational diseases resulted in permanent disabilities. While only 28 per cent of all employment injuries resulted in permanent disabilities, 41 per cent of occupational diseases resulted in permanent disability.

The proportion of permanent disability was significantly higher among males than females. Some 53 per cent of occupational disease claims for males were permanent disability, while female claims for permanent disability totalled only 16 per cent.

**Figure 25: Time lost and gross incurred cost proportions for temporary disability claims, 2003/04**

The most common occupational diseases were mental disorders, accounting for over 34 per cent of such claims. Deafness, disorders of muscle, tendons and other soft tissues and hernia were the other most common occupational diseases (see Table 13).

<sup>1</sup> Note that the denominator data to calculate incidence/frequency rates for 2003/04 claims is different from previous years in that it is based on the 2001 census data. The gap in the graph between 2002/03 and 2003/04 is to highlight the fact the 2003/04 rates are not comparable with previous years.

## Occupational Diseases

Table 13: Distribution of occupational disease claims by nature of diseases, 2003/04

| Nature of diseases   | Number of claims | Percentage of all occupational disease | Percentage of all employment injuries |
|--|------------------|--|---------------------------------------|
| Mental disorders <sup>1</sup>  | 3,226            | 33.6                                   | 6.3                                   |
| Deafness   | 2,706            | 28.2                                   | 5.2                                   |

| <b>Total</b>   | <b>9,604</b>     | <b>100</b>                             | <b>18.6</b>                           |

<sup>1</sup> Includes conditions attributed to psychological stress.

<sup>2</sup> Includes carpal tunnel syndrome and mononeuritis.

<sup>3</sup> Includes bronchitis, cold and flu.

<sup>4</sup> Includes asthma.

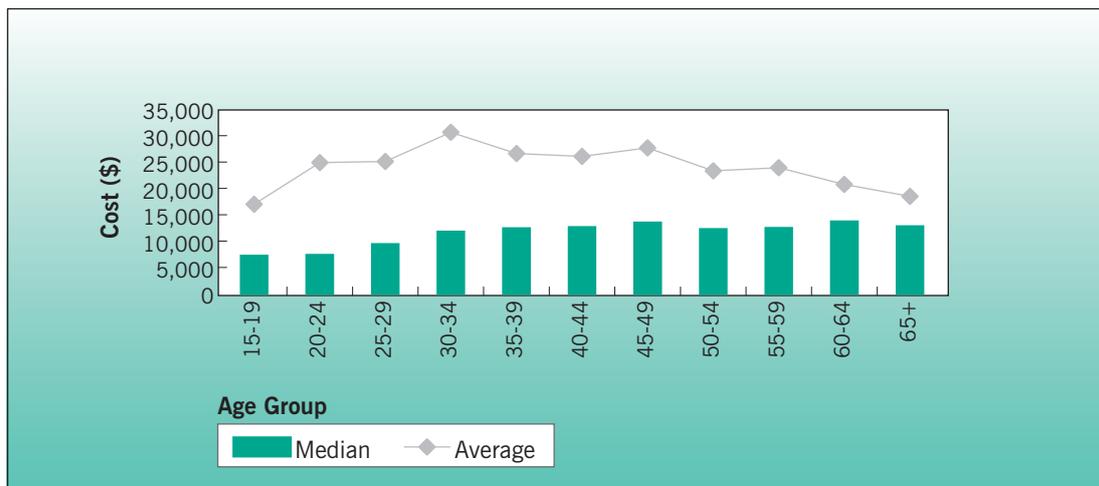

### Age distribution

Figure 26: Distribution of occupational disease claims by age, 2003/04

Figure 26 shows that the number of claims for occupational diseases increased with age, peaking in the 55–59 age group for males and the 45–49 age group for females.

Occupational Diseases

Figure 27: Occupational diseases by age and average/median gross incurred cost 2003/04

Industry distribution

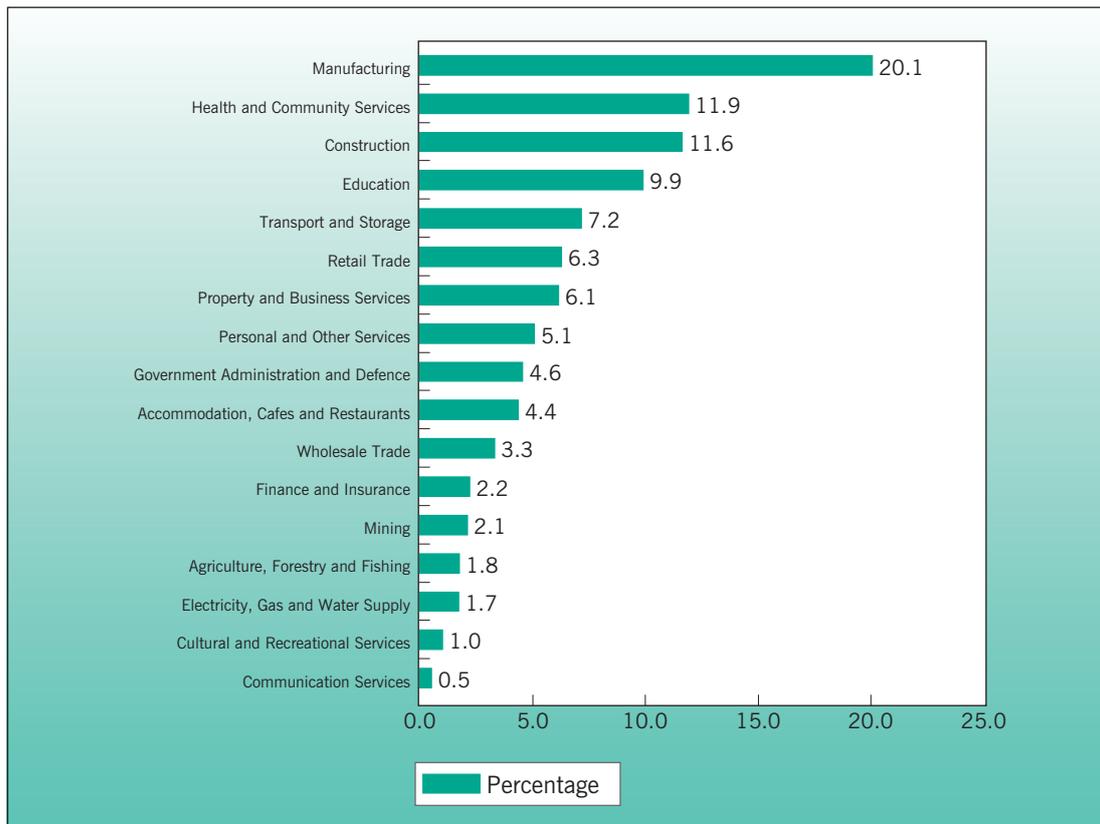

Mining, manufacturing, electricity/gas and water supply, construction, and transport and storage had incidence rates above the NSW incidence rate of 3.5 (see Figure 28).

Figure 28: Incidence rate of occupational disease claims by industry, 2003/04

## Occupational Diseases

Figure 29: Distribution of occupational disease claims by industry, 2003/04

## Occupational distribution

Labourers and related workers, intermediate production and transport workers and tradespersons and related workers were three occupational groups with incidence rates above the NSW incidence rate of 3.5.

Figure 30: Incidence rate of occupational disease claims by occupation 2003/04

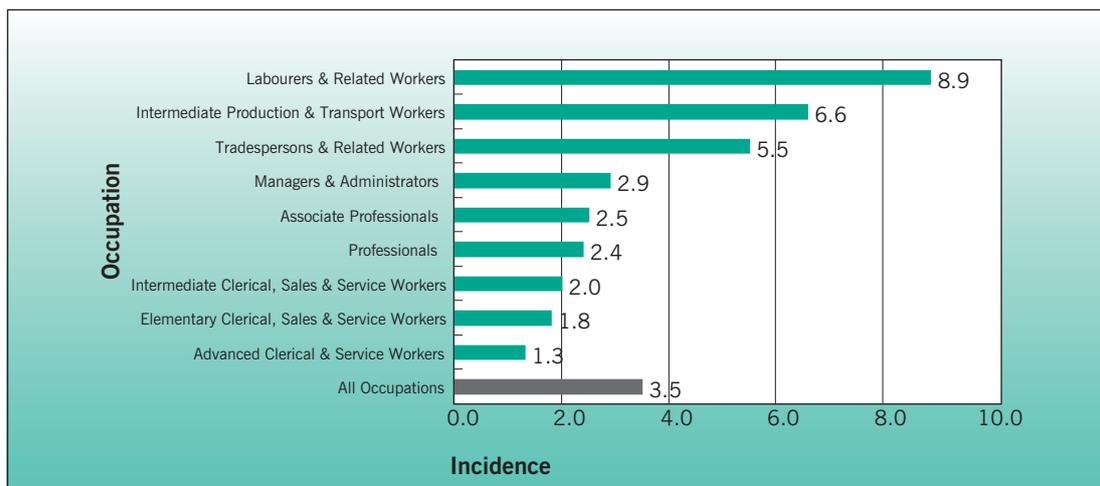

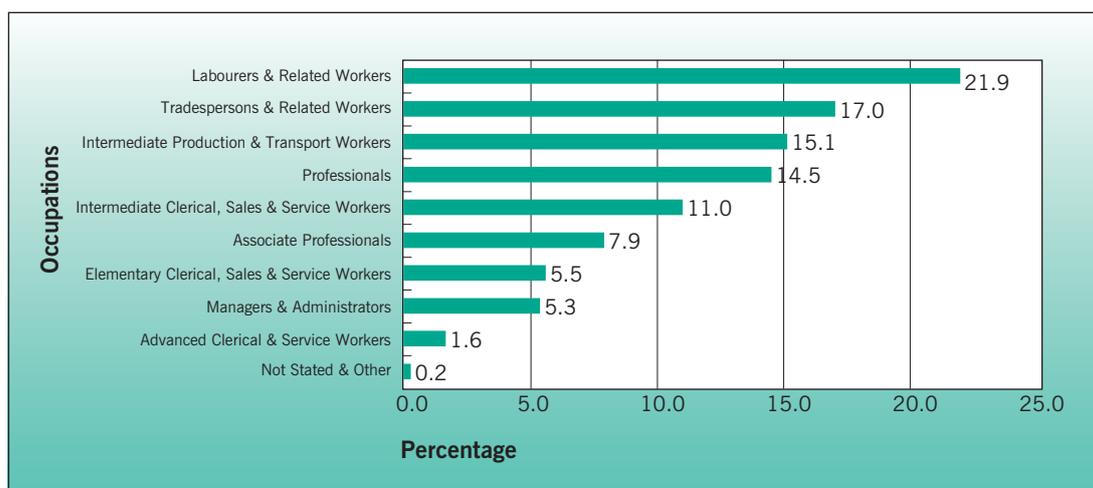

Figure 31 shows that the largest number of occupational disease claims were made by labourers and related workers, followed by tradespersons and related workers and intermediate production and transport workers.

Figure 31: Distribution of occupational disease claims by occupation 2003/04

## Selected diseases

### Deafness

Occupational deafness is irreversible hearing loss induced by noise and develops from exposure to high noise levels over a period of time.

The incidence rate has dropped significantly from 5.1 in 1994/95 to 1.0 in 2003/04. This is mainly due to amendments to the Workers Compensation Act in 1995, which restricted deafness claims to a minimum of six per cent hearing loss for claims made on or after 10 November 1995 (see Table 14).

More than one quarter, 28 per cent, of occupational disease claims in 2003/04 were occupational deafness claims. The average cost for deafness claim was relatively low at \$14,347, compared to the average for all occupational disease claims of \$25,164. Industries with a substantially greater proportion of occupational deafness were mining, electricity/gas and water supply, construction and manufacturing (see Table 15).

Table 14: Deafness claims, gross incurred cost and incidence rate, 1994/95 to 2003/04

| Year    | Total  | Incidence rate | No. of deafness claims as a percentage of diseases | Gross incurred cost of deafness claims (\$'000) |
|---------|--------|----------------|--|---|
| 1994/95 | 11,212 | 5.1            | 66.7   | 97,455  |
| 1995/96 | 10,684 | 4.7            | 65.9   | 100,877   |
| 1996/97 | 5,979  | 2.6            | 52.5   | 70,682  |
| 1997/98 | 4,824  | 2.1            | 47.4   | 59,061  |
| 1998/99 | 4,741  | 2              | 49.6   | 53,852  |
| 1999/00 | 4,382  | 1.8            | 47.8   | 56,399  |
| 2000/01 | 4,095  | 1.5            | 44.2   | 56,303  |
| 2001/02 | 3,576  | 1.3            | 36.2   | 55,673  |

### Mental disorders

The term mental disorders refers to a range of psychological conditions for which workers compensation may be paid, including clinical depression and post-traumatic stress disorder.

It should be noted that although stress itself is not a compensable psychological condition, it is one factor in the workplace that may contribute to a compensable psychological condition.

Table 16 shows a significant increase in mental disorder claims over the last 10 reporting periods, except for a slight decrease in 2003/04. Legislative amendments in January 1996 restricted compensation for psychological or psychiatric disorders by ruling that employment must be a substantial cause, and the disorder must not be wholly or predominantly caused by specified reasonable employer actions.

**Table 16: Number of mental disorder claims by gender 1994/95 to 2003/04**

| Year    | Males | Females | Total | Incidence rate | Percentage of all diseases | Percentage of all claims |
|---------|-------|---------|-------|----------------|----------------------------|--------------------------|
| 1994/95 | 784   | 804     | 1,588 | 0.7            | 9.4                        | 2.5                      |
| 1995/96 | 752   | 986     | 1,738 | 0.8            | 10.7                       | 2.8                      |
| 1996/97 | 720   | 867     | 1,587 | 0.7            | 13.9                       | 2.6                      |
| 1997/98 | 875   | 1,033   | 1,908 | 0.8            | 18.8                       | 3.3                      |
| 1998/99 | 736   | 946     | 1,682 | 0.7            | 17.6                       | 3.0                      |
| 1999/00 | 711   | 866     | 1,577 | 0.6            | 17.2                       | 3.0                      |
| 2000/01 | 829   | 1,087   | 1,916 | 0.7            | 20.7                       | 3.6                      |
| 2001/02 | 1,151 | 1,492   | 2,643 | 1.0            | 26.8                       | 4.8                      |
| 2002/03 | 1,396 | 1,850   | 3,246 | 1.2            | 35.4                       | 6.4                      |
| 2003/04 | 1,330 | 1,896   | 3,226 | 1.2            | 33.6                       | 6.3                      |

Mental disorders made up 34 per cent of all occupational diseases on 2003/04 and comprised the majority of occupational diseases in education at 76 per cent and finance and insurance at 70 per cent. Also recording high proportions of mental disorder claims were personal and other services at 58 per cent and health and community services at 56 per cent (see Table 16).

The total gross incurred cost was \$89.7 million with an average of \$27,798. The total time lost caused by mental disorders was 63,392 weeks, with an average of 21 weeks.

<sup>2</sup> Incidence rate is the number of mental disorder claims per 1000 employees.

## Occupational Diseases

Table 17: Number and incidence rate of mental disorder claims by industry, 2003/04

| Industry                             | Number of mental disorders | Incidence rate | Percentage of all diseases | Number of diseases | Percentage of all employment injuries |
|--------------------------------------|----------------------------|----------------|----------------------------|--------------------|---------------------------------------|
| Education                            | 719                        | 3.2            | 75.6                       | 951                | 25.6                                  |
| Finance and insurance                | 149                        | 1.0            | 70.0                       | 213                | 16.4                                  |
| Personal and other services          | 282                        | 2.7            | 57.8                       | 488                | 13.3                                  |

## Occupational overuse syndrome

Occupational overuse syndrome refers to diseases that involve the musculoskeletal system and is a range of conditions characterised by discomfort or persistent pain in muscles, tendons and other soft tissues, with or without physical manifestations. Occupational overuse syndrome is usually associated with repetitive movement, sustained or constrained postures, and/or forceful movements.

Table 18: Occupational overuse syndrome claims 1994/95 to 2003/04

| Year    | Number of claims | Incidence rate | Gross incurred cost total (\$'000) |
|---------|------------------|----------------|------------------------------------|
| 1994/95 | 1,180            | 0.5            | 22,912                             |
| 1995/96 | 1,188            | 0.5            | 23,229                             |
| 1996/97 | 1,140            | 0.5            | 23,497                             |
| 1997/98 | 913              | 0.4            | 22,673                             |
| 1998/99 | 889              | 0.4            | 19,162                             |
| 1999/00 | 954              | 0.4            | 26,382                             |
| 2000/01 | 1,044            | 0.4            | 36,271                             |
| 2001/02 | 1,260            | 0.5            | 44,746                             |
| 2002/03 | 1,207            | 0.4            | 32,215                             |
| 2003/04 | 1,282            | 0.5            | 35,745                             |

A total of 1,282 claims were reported in 2003/04, representing 13 per cent of all occupational diseases. The total cost for these claims was \$35.7 million with an average cost of \$27,882. Total lost time was 11,464 weeks, with an average of 14 weeks. Manufacturing and health and community services had the highest number of claims, followed by retail trade, property and business services, construction and education (see table 19).

**Table 19: Occupational overuse syndrome by industry 2003/04**

| Industry                             | Number of claims | Percentage of all occupational diseases | Number of occupational diseases |
|--------------------------------------|------------------|---|---------------------------------|
| Manufacturing                        | 236              | 12.2                                    | 1,927                           |
| Health and community services        | 212              | 18.5                                    | 1,144                           |
| Retail trade                         | 120              | 19.9                                    | 603                             |
| Property and business services       | 103              | 17.5                                    | 590                             |

### Hernia

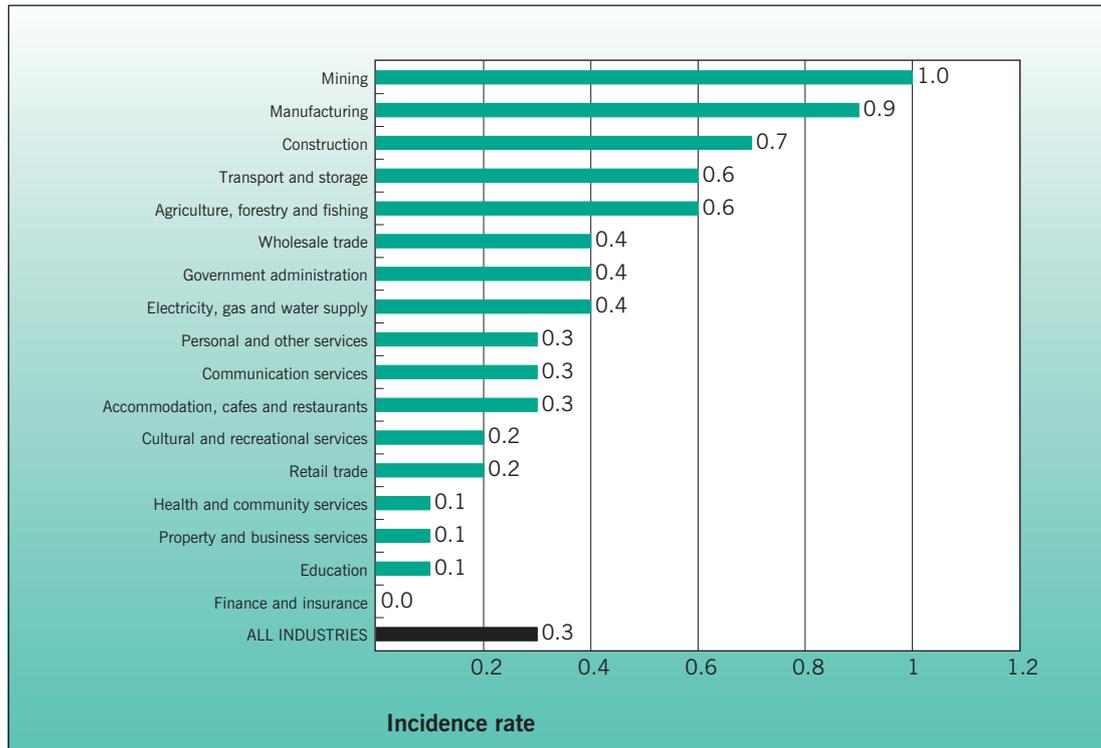

Hernia is a condition of the digestive system and is included in the 'Occupational disease' category. In 2003/04, hernia was the fourth most commonly reported occupational disease with 932 claims, representing 10 per cent of all diseases.

Occupations associated with high incidence rates of hernia were farmers and farm managers at 1.5, other labourers and related workers at 1.4, intermediate machine operators at 1.4, and other intermediate production and transport workers at 1.2. Across all occupations the incidence rate of hernia was 0.3.

The average gross incurred cost was \$15,443 and lost time was 12 weeks. Lifting, carrying or other body stressing caused 90 per cent of reported hernias.

## Occupational Diseases

Figure 32: Incidence rate of hernia claims by industry 2003/04 Trends 1994/95 to 2003/04

# other work-related injuries

*Other work-related injuries are caused by incidents occurring at places away from the workplace. Included are road traffic accidents arising from employment while on duty, commuting accidents and injuries occurring during a recess while the worker is away from work.*

*In editions of the NSW Workers Compensation Statistical Bulletin prior to 2002/03, injuries in this section were termed 'non-workplace injuries'.*

## Trends, 1994/95 to 2003/04

### Number of other work-related injuries

In 2003/04 there were 4,609 other work-related injuries, representing nine per cent of all employment injuries. Of these, 3,621 or seven per cent were results of commuting accidents while 735 or one per cent were caused by road traffic accidents. The remaining 253 or 0.5 per cent, occurred while away from work during a recess.

Since 1994/95 other work-related injuries have increased by 35 per cent. Other work-related injuries increased by 204 claims or five per cent in 2003/04 compared to 2002/03.

**Figure 33: Number of other work-related injuries from 1994/95 to 2003/04**

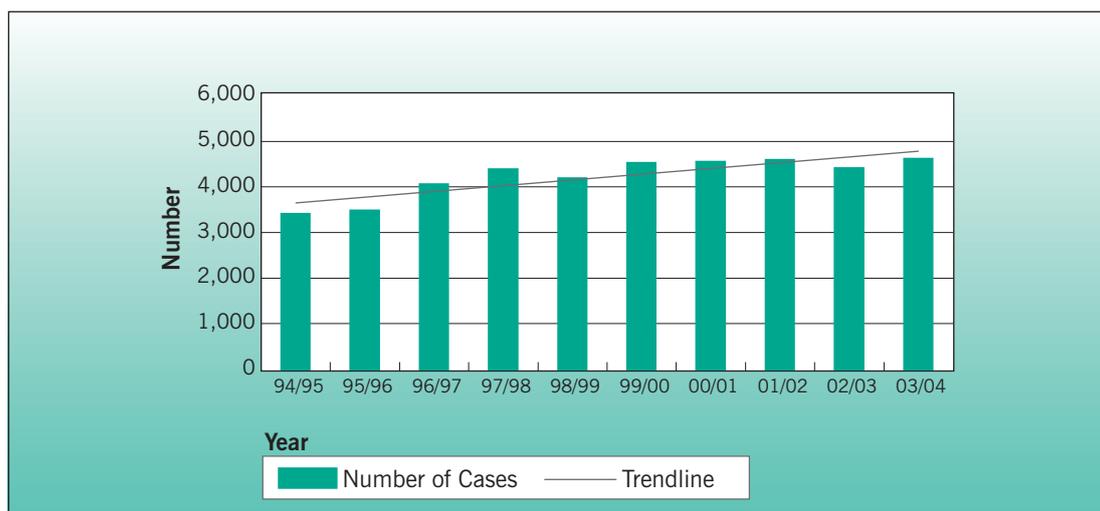

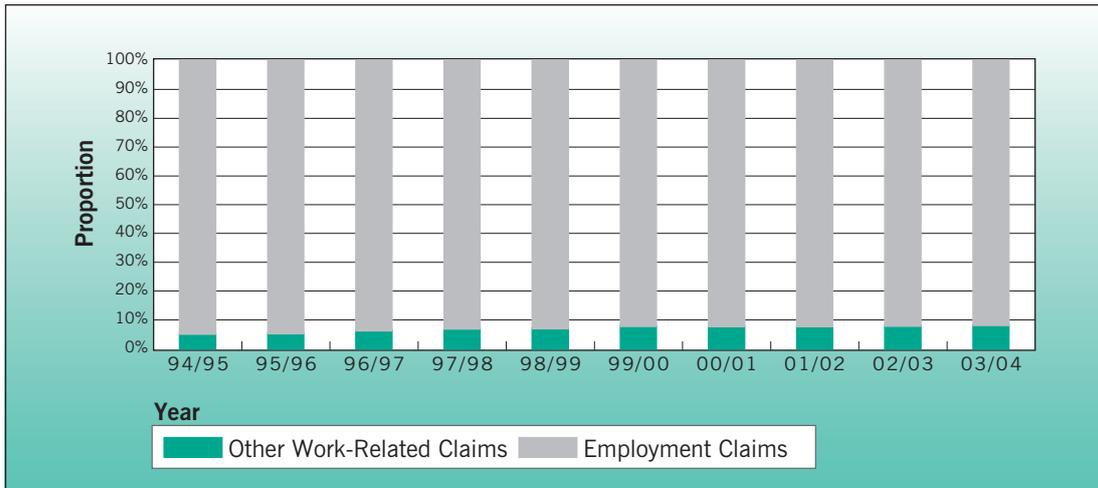

Figure 34 shows that the proportion of other work-related injuries has increased steadily.

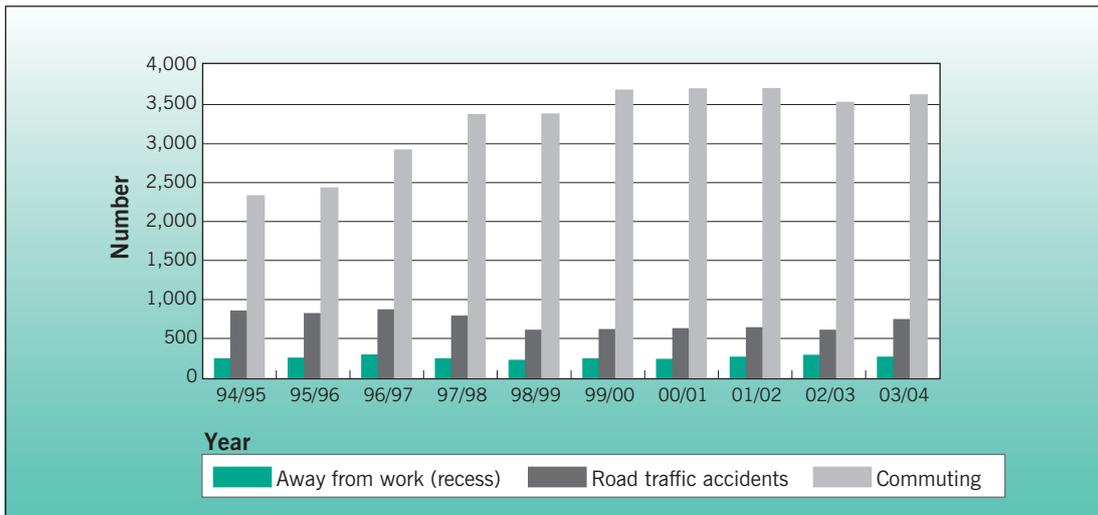

### Other Work-related Injuries

**Figure 34: Other work-related claims as a proportion of all employment injury claims**

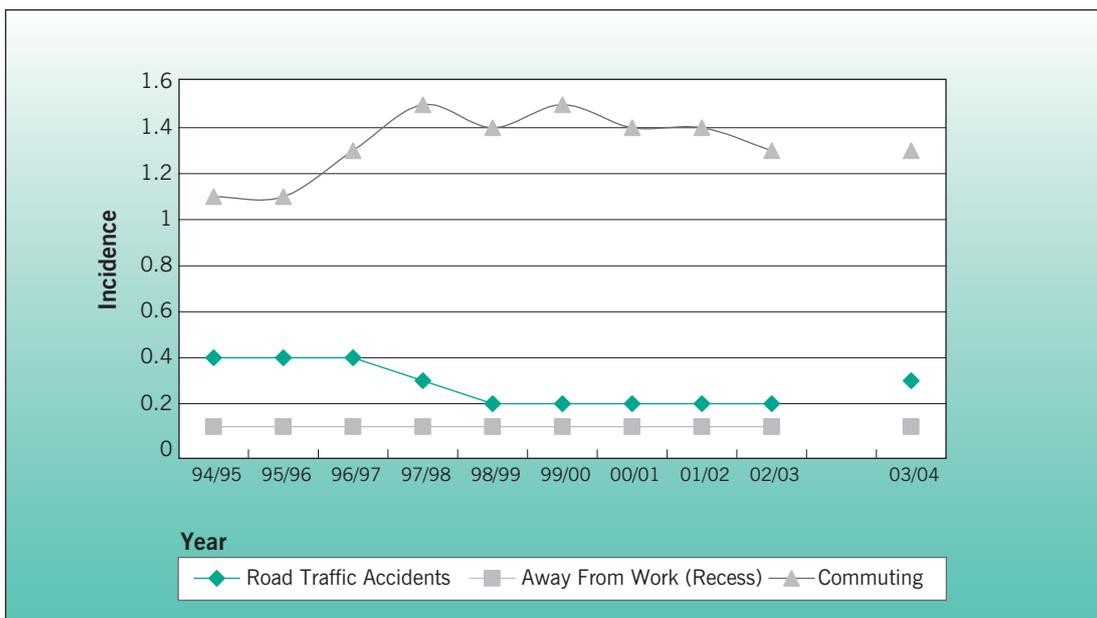

In 2003/04, claims resulted from traffic accidents increased by 23 per cent compared to 2002/03. Injuries occurring away from work during a recess decreased by 11 per cent, and commuting accidents increased by three per cent (see Figure 35).

**Figure 35: Number of other work-related injuries 1994/95 to 2003/04injuries**

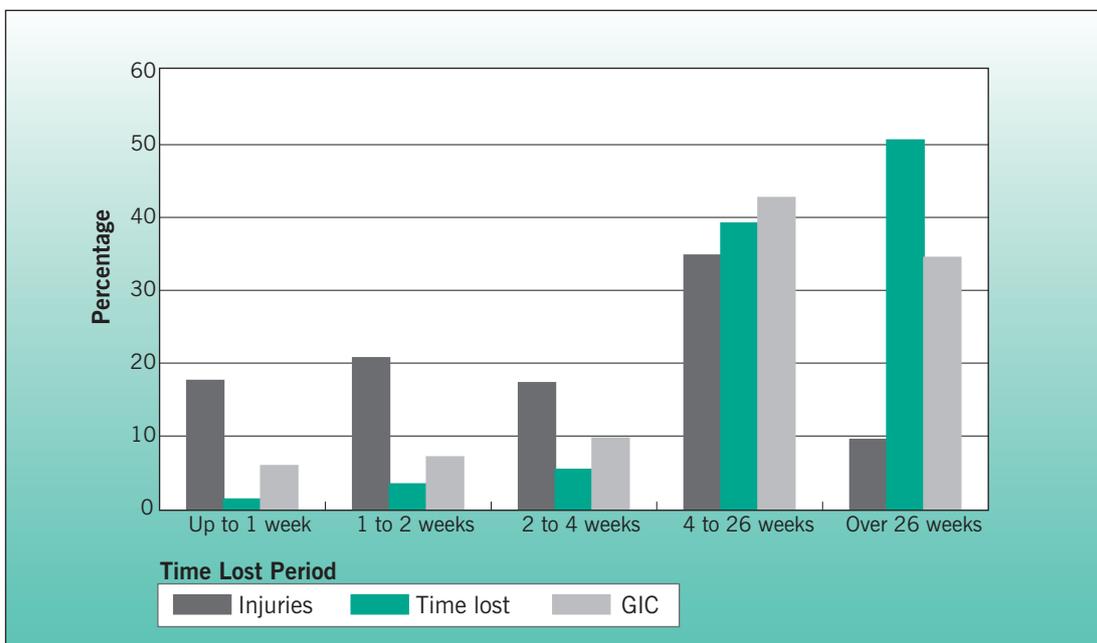

Other Work-related Injuries

Figure 36: Incidence rate of other work-related injuries 1994/95 to 2003/04

In 2003/04 there were 3,352 other work-related claims resulting in temporary disability, 44 per cent of which resulted in four or more weeks off work. These claims accounted for 77 per cent of gross incurred cost and 90 per cent of time lost (see Figure 37). This demonstrates that the bulk of other work-related temporary disability costs were due to severe long-term injuries.

Figure 37: Analysis of severity of injury 2003/04

1. Note that the denominator data to calculate incidence/frequency rates for 2003/04 claims is different from previous years in that it is based on the 2001 census data. The gap in the graph between 2002/03 and 2003/04 is to highlight the fact the 2003/04 rates are not comparable with previous years.

### Other Work-related Injuries

#### Gross incurred cost and time lost

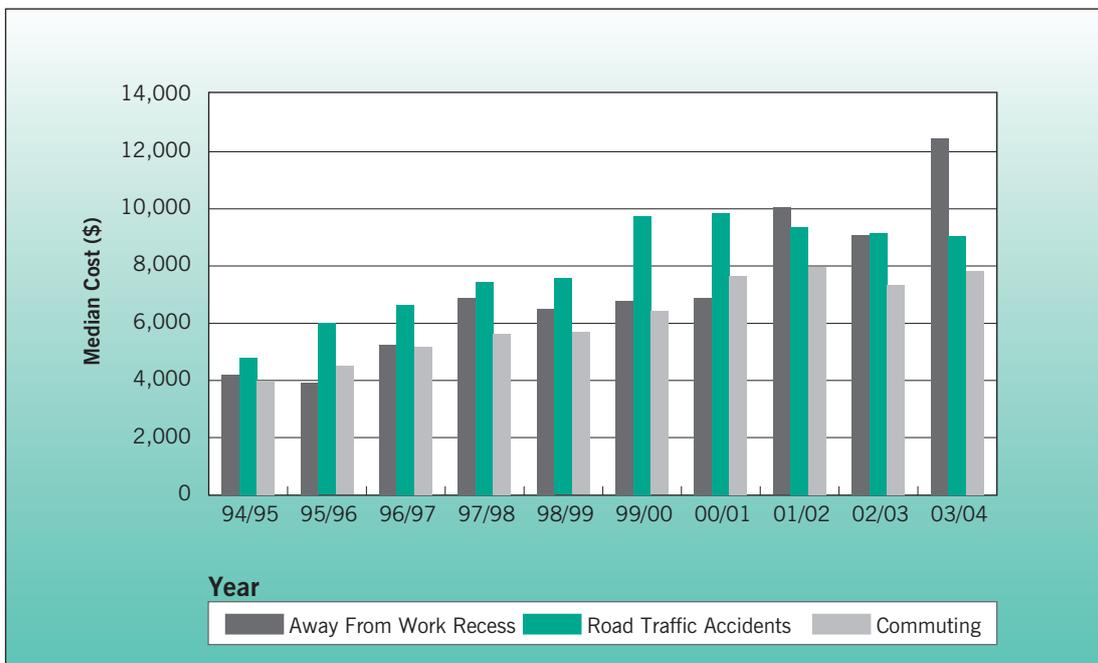

The average gross incurred cost of other work-related injury claims in 2003/04 was \$28,317, an increase of 20 per cent from 2002/03.

Average time lost in 2003/04 was 9.4 weeks, a decrease of 12 per cent from 2002/03, whereas the median time lost fell from 3.4 to 3.3 weeks (see Figures 38 and 39).

**Figure 38: Other work-related injury claims (gross incurred cost mean)**

**Figure 39: Other work-related injury claims (gross incurred cost median)**

Other Work-related Injuries

Figure 40: Other work-related injuries (lost time mean)

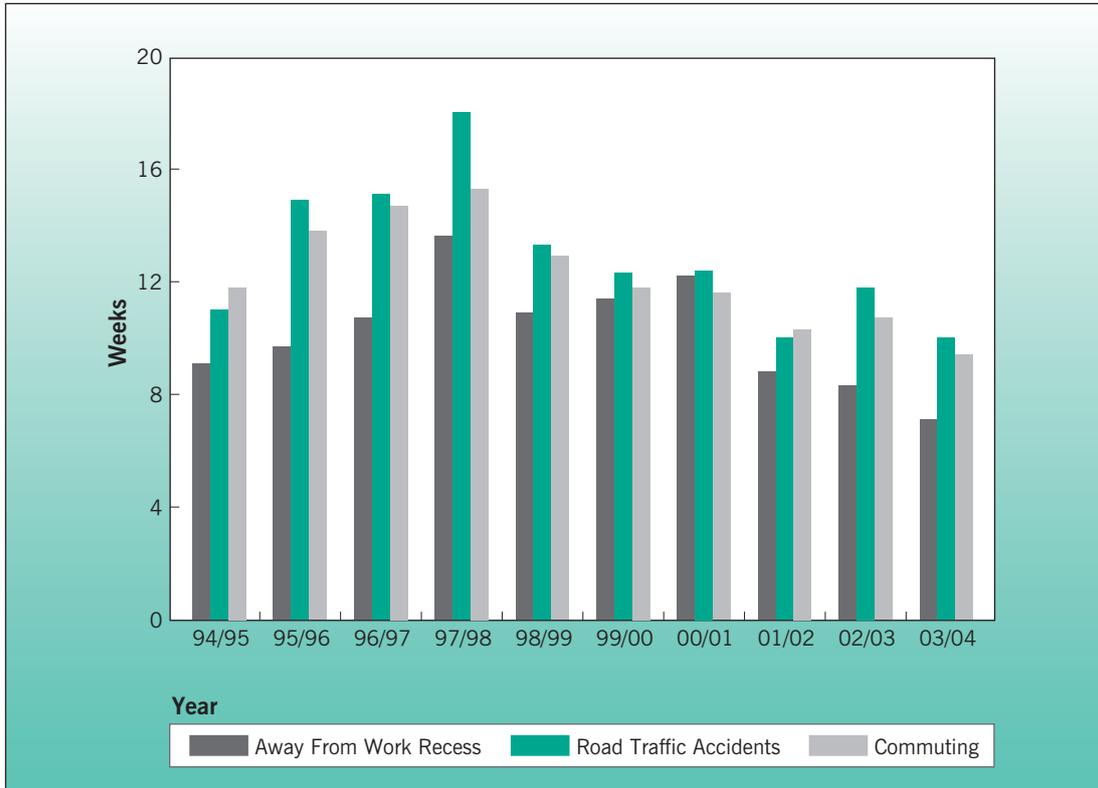

Figure 41: Other work-related injuries (lost time median)

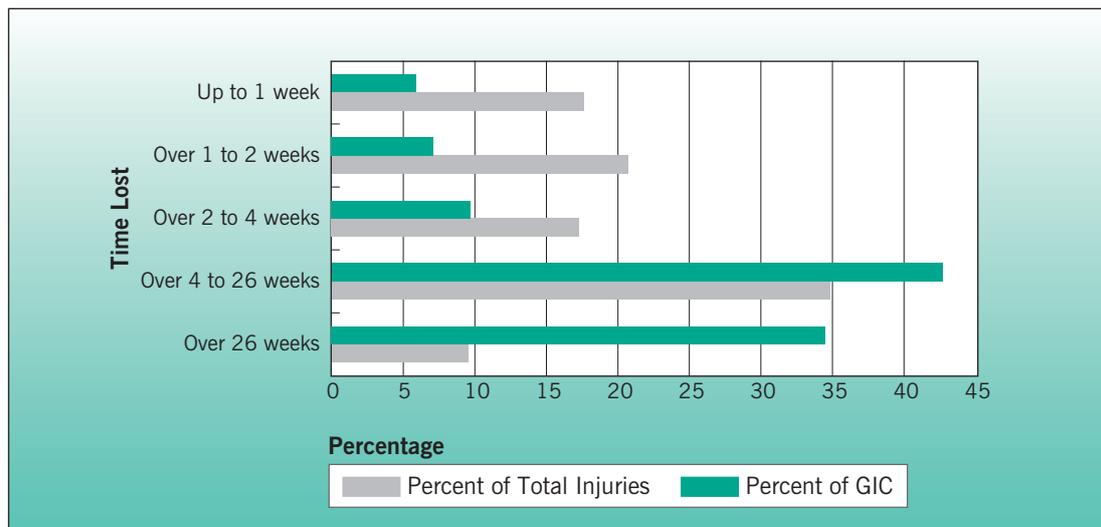

#### Other work-related injuries 2003/04

##### Number, gross incurred cost and lost time

Of the 4,609 other work-related injuries in 2003/04, 1,191 resulted in permanent disabilities while 3,352 were temporary disabilities. Temporary disabilities of six months and over made up seven per cent of all other work-related injuries.

The total gross incurred cost of other work-related injuries was \$130.5 million with an average of \$28,317 per claim. However, half the claims had a gross incurred cost of \$8,274 or less. The total time lost was 31,346 weeks with an average of 9.4 weeks.

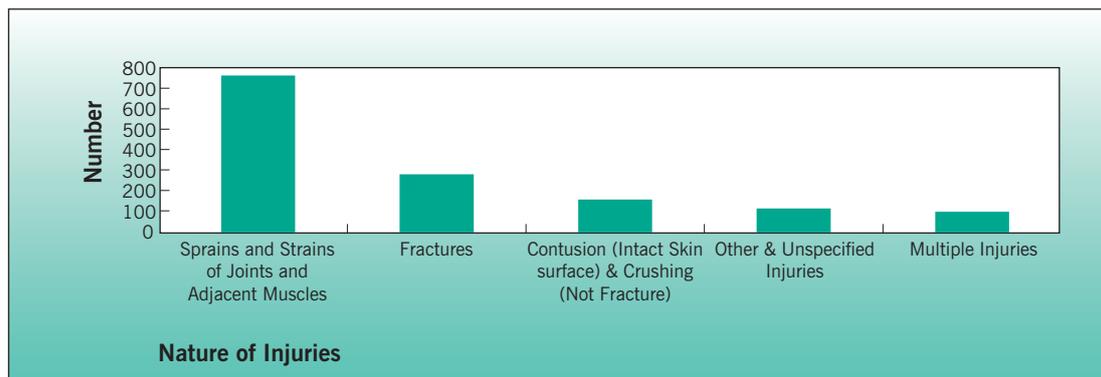

**Figure 42: Distribution of other work-related claims by gross incurred cost and lost time**

##### Number, gross incurred cost and time lost for long-term temporary disability claims

Long-term injuries, which only include claims for four weeks of lost time, made up the majority of other work-related temporary disability claims. Sprains and strains of joints and adjacent muscles were the most common cause of other work-related injuries, followed by fractures and contusions (see Figure 43).

**Figure 43: Top five number by nature of injuries**

Other Work-related Injuries

Figure 44: Top five gross incurred cost by nature of injuries

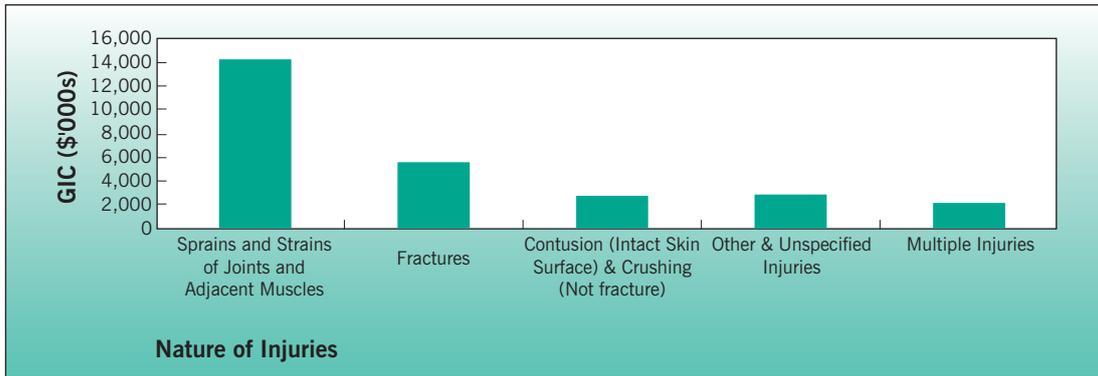

Table 20: Top five number and gross incurred cost for long-term temporary disability claims by nature of injuries

| Nature of injury  | Number | Gross incurred cost (\$'000) |
|---|--------|------------------------------|
| Sprains and strains of joints and adjacent muscles          | 756    | 13,963                       |
| Fracture  | 272    | 5,344                        |
| Contusion (intact skin surface) and crushing (not fracture) | 149    | 2,505                        |
| Other and unspecified injuries                              | 105    | 2,619                        |
| Multiple injuries   | 89     | 1,909                        |

Number and incidence rate by age and gender

Figure 45 shows that other work-related injuries peaked in the 25–29 age group and generally declined in the higher age groups. There were 2,151 claims from females, accounting for 47 per cent of all other work-related injuries. Male incidence rates were higher than that of females at younger ages. However, for age groups over 45, female incidence rates were higher than for males (see Figure 46).

### Other Work-related Injuries

Figure 45: Other work-related injuries

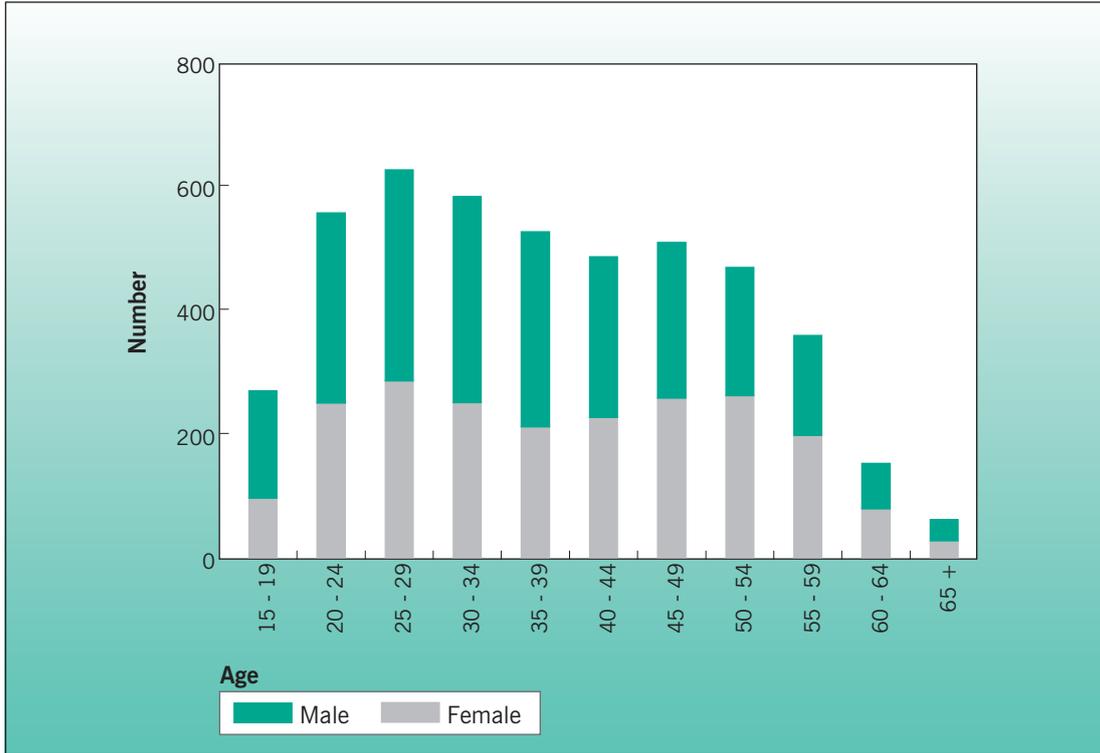

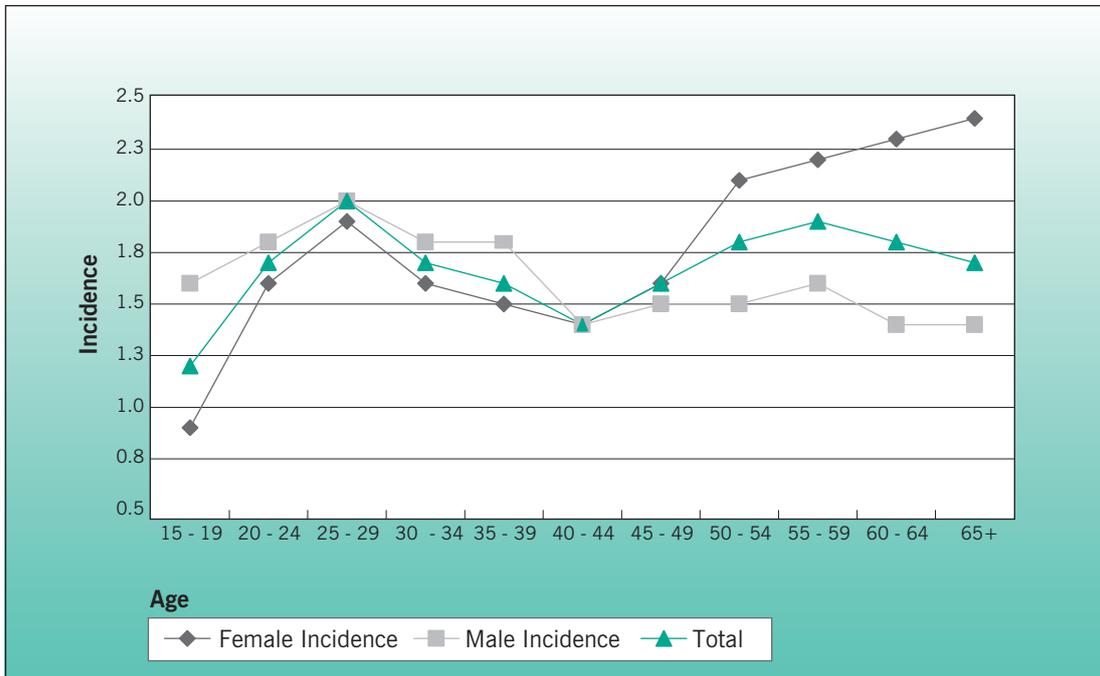

Figure 46: Other work-related by age and gender incidence rate by age and gender

## Other Work-related Injuries

### Cause of injury

**Table 21: Distribution of other work-related claims by cause of injury**

| Cause of injury/disease                    | Number       | Gross incurred costs (\$'000) |
|--|--------------|-------------------------------|
| Vehicle accidents                          | 2,672        | 84,873                        |
| Falls, trips and slips of a person         | 957          | 18,153                        |
| Hit by moving objects                      | 526          | 19,891                        |
| Body stressing                             | 227          | 3,860                         |
| Hitting objects with a part of the body    | 126          | 1,910                         |
| Other and unspecified mechanisms of injury | 78           | 1,545                         |
| Heat, radiation and electricity            | 12           | 209                           |
| Chemicals and other substances             | 5            | 21                            |
| Mental stress                              | 5            | 39                            |
| Sound and pressure                         | 1            | 12                            |
| <b>Total</b>                               | <b>4,609</b> | <b>130,513</b>                |

Commuting and road traffic incidents constitute the bulk of other work-related injury claims, indicating vehicles were the main cause of injury in this category. Vehicle related incidents accounted for 58 per cent of other work-related incidents followed by falls, trips and slips at 21 per cent (see Table 21).

### Industry distribution

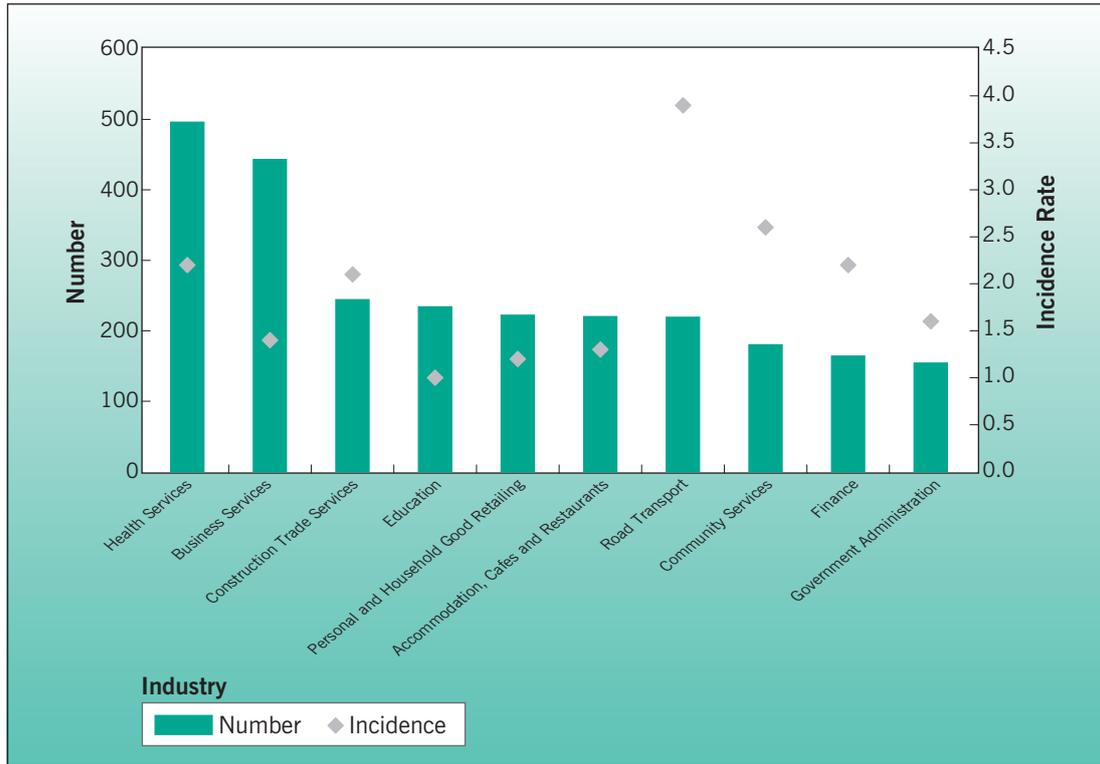

Industries with a higher than the NSW incidence rate number of other work-related injuries were health and community services at 676, manufacturing at 592, property and business services at 498, and retail trade at 470.

Communication services had the highest incidence rate of other work-related injuries at 3.3, followed by transport and storage at 3.1, health and community services at 2.3, manufacturing at 2.0 and construction at 2.0.

A further breakdown of other work-related injuries by industry sub-division is shown in Figure 47.

### Other Work-related Injuries

Figure 47: Number and incidence rate of other work-related injuries by top 10 industry division

#### Occupational analysis

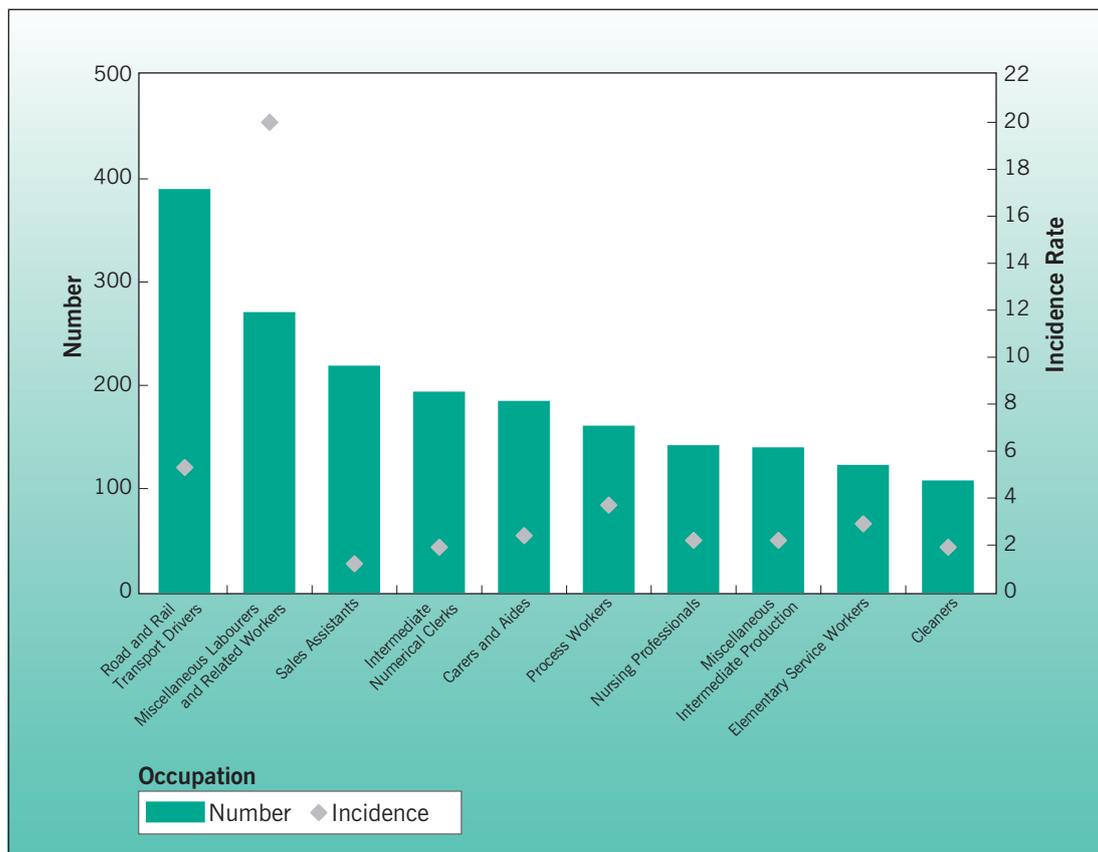

Occupations with a high number of other work-related injury claims were intermediate clerical, sales and service workers at 863, labourers and related workers at 685, professionals at 659 and intermediate production and transport workers at 638.

The highest incidence rate of 2.9 claims within the occupational groups were for labourers and related workers and intermediate production and transport workers. Other occupational groups with higher than average incidence rates were tradespersons and related workers at 1.7 and intermediate clerical, sales and service workers at 1.6.

A further breakdown of other work-related claims by sub-occupation division is shown in Figure 48.

Other Work-related Injuries

Figure 48: Number and incidence rate of other work-related injuries by top 10 occupation sub-category

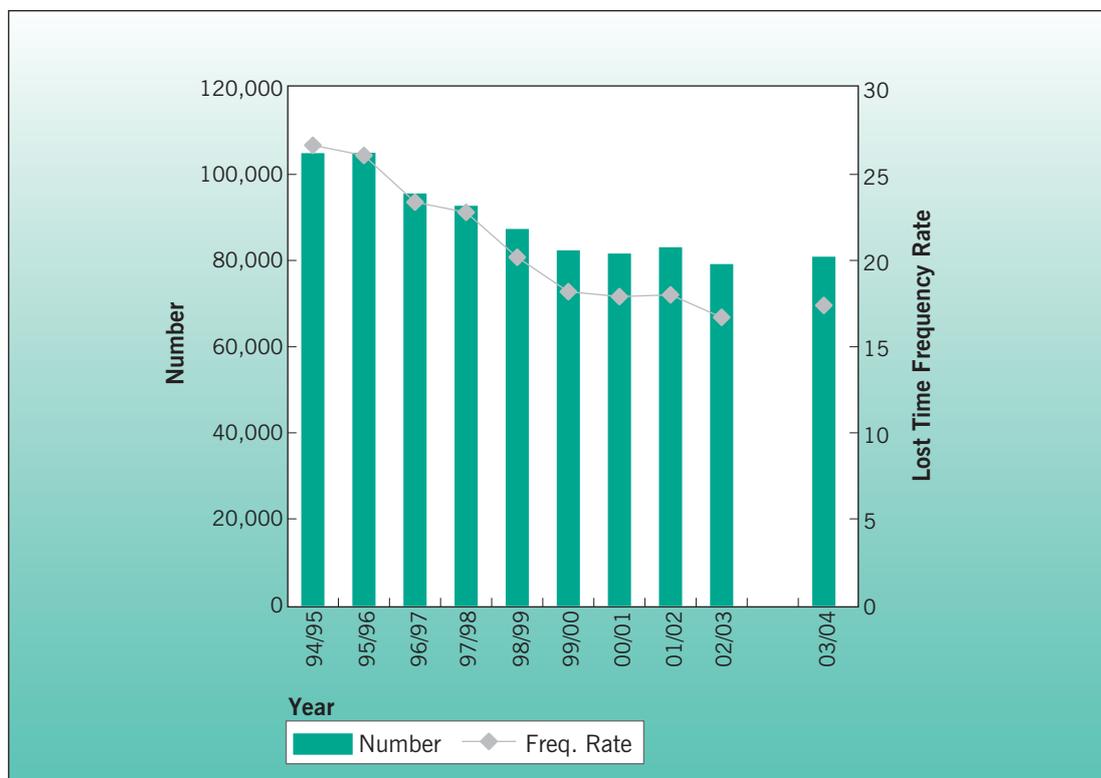

# lost time injuries/diseases

***This section covers occurrences that resulted in fatalities, permanent disabilities, or temporary disabilities when one or more days have been paid for total incapacity and reported to insurers during the relevant financial years. The definitions used in this section are in accordance with the Workplace Injury and Disease Recording Standard – NOHSC (WorkSafe) – AS 1885.1 – 1990.***

## Trends 1994/95 to 2003/04

Figure 49 shows that the overall lost time injury/disease frequency rate has been declining for the last nine years except for a slight increase in 2003/04. In 1994/95 the lost time injury/disease frequency rate peaked at 26.7, but since then it has been steadily dropping each year to a low of 16.7 in 2002/03 and only slightly increasing to 17.4 in 2003/04.

**Figure 49: Number and frequency rate of lost time claims 1994/95–2003/04**

<sup>1</sup> The denominator data to calculate incidence/frequency rates for 2003/04 claims is different from previous years in that it is based on the 2001 census data. The gap in the graph between 2002/03 and 2003/04 is to highlight the fact the 2003/04 rates are not comparable with previous years.

**Lost time injury/disease claims 2003/04**

During 2003/04, the total number of lost time claims was 80,622. The total gross incidence cost for these claims was \$1,132 million. Lost time injuries/diseases of less than five days consisted of 36 per cent of all lost time injuries/diseases, while the cost for these was only five per cent. The average gross incidence cost for lost time claims was lower at \$14,035, compared to major employment injuries at \$20,918. This is mostly due to including minor claims in this section.

The total time lost for this group of claims was 397,074 weeks, with an average of six weeks per claim. However, half of the claims resulted in less than one week off work compared to three weeks for major employment injuries.

Table 22 compares the industry distribution of lost time claims with major employment injuries. The 10 highest ranking industries displayed a similar distribution for both lost time injuries and employment injuries.

**Table 22: Number of lost time injuries/diseases and major employment injuries by industry 2003/04**

| Industry                             | Number of lost time injuries/diseases | %          | Number of major employment injuries | %          |
|--------------------------------------|---------------------------------------|------------|-------------------------------------|------------|
| Manufacturing                        | 15,268                                | 18.9       | 9,547                               | 18.5       |
| Health and community services        | 9,883                                 | 12.3       | 6,223                               | 12.1       |
| Construction                         | 8,681                                 | 10.8       | 6,078                               | 11.8       |
| Retail trade                         | 8,136                                 | 10.1       | 5,002                               | 9.7        |

Figure 50: Relative lost time frequency rate by industry 2003/04

# payments

*This section covers payments for all claims from WorkCover managed fund, treasury managed fund, self, group and specialised insurers, including claims of less than five days and those in previous reporting periods.*

*Changes to the workers compensation legislation that have caused variations in the data since 1987/88 are explained in Appendix D.*

*Compensation payments are broken into 14 categories, and non-compensation payments into five categories.*

## Trends, 1994/95 to 2003/04

Total payments consist of weekly benefits, lump sum payments and payments for medical treatment as well as non-compensation payments, such as legal payments, payments for common law damages and investigation expenses. Total payments decreased from \$3,250 million in 2002/03 to \$2,806 million in 2003/04, a fall of \$444 million, or 14 per cent. When adjusted for the increase in average weekly earnings in New South Wales, the decrease in payments was around 18 per cent (see Figure 51).

This significant decrease was attributed to the reduction in damages and common law payments by 57 per cent from \$1,014 million in 2002/03 to \$432 million in 2003/04. Other payments including weekly benefits and medical payments increased from \$740 million and \$415 million (respectively) in 2002/03 to \$826 million and \$499 million in 2003/04 (see Figure 52).

Since 2001/02 payments for weekly benefits have been increasing. This shows that Workers Compensation system of NSW is following an income replacement approach where weekly payments are regarded as primary benefit.

There was a reduction in lump sum payments from 2001/02, mainly due to the decrease in commutation payments. Access for commutation payments was limited from 2001 by reforms that tightened the conditions for obtaining commutation.

There was an escalation in payments for common law damages until 2002/03. The large amounts paid in 2002/03 and 2003/04 were a result of settling outstanding common law claims.

**Figure 51: Total payments 1994/95 to 2003/04**

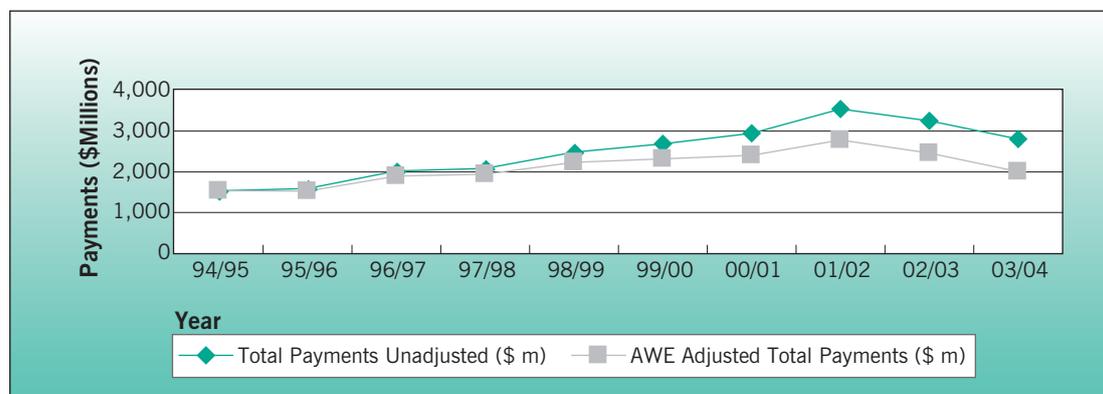

Figure 52 shows the trends in compensation and non-compensation payments for 1994/95 to 2003/04. A detailed description of payment types is provided in Table 24.

### Payments

Figure 52: Payment type by category 1994/95 to 2003/04

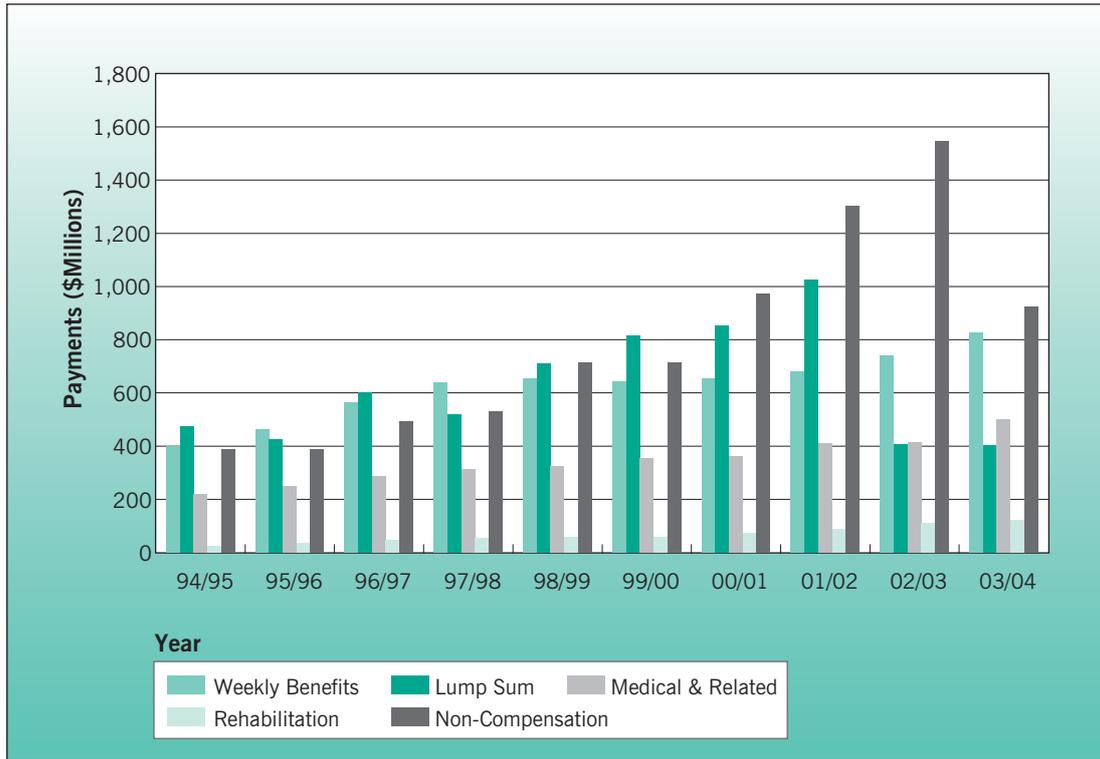

Table 24: Compensation and non-compensation payments

| Compensation payments                         |  |                                 |                         |   | Non-compensation          |
|---|--|---------------------------------|-------------------------|---|---------------------------|
| Medical and related                           | Lump sum                                       | Weekly benefits                 | Rehabilitation          | Others                                  |                           |
| Ambulance Services                            | Commutations                                   | Partial incapacity (Section 38) | Rehabilitation services | Death payments                          | Transport and maintenance |
| Medical treatment                             | Permanent impairment (Section 66)              | Total incapacity                |                         | Damage to artificial limbs and clothing | Common law damages        |
| Hospital treatment                            | Pain and suffering, Section 67                 | Partial incapacity (Section 40) |                         |   | Investigation expenses    |
| Allied health eg, physiotherapy, chiropractic | Interest on Section 66, 67 lump sum settlement |                                 |                         |   | Interpreter services      |
|   |  |                                 |                         |   | Legal payments            |

<sup>1</sup> Death payments are excluded from lump sum payments.

Figure 53: Distribution of payment types as percentages of total payment 1994/95 to 2003/04

### Total payments, 2003/04

#### Proportion of total payments

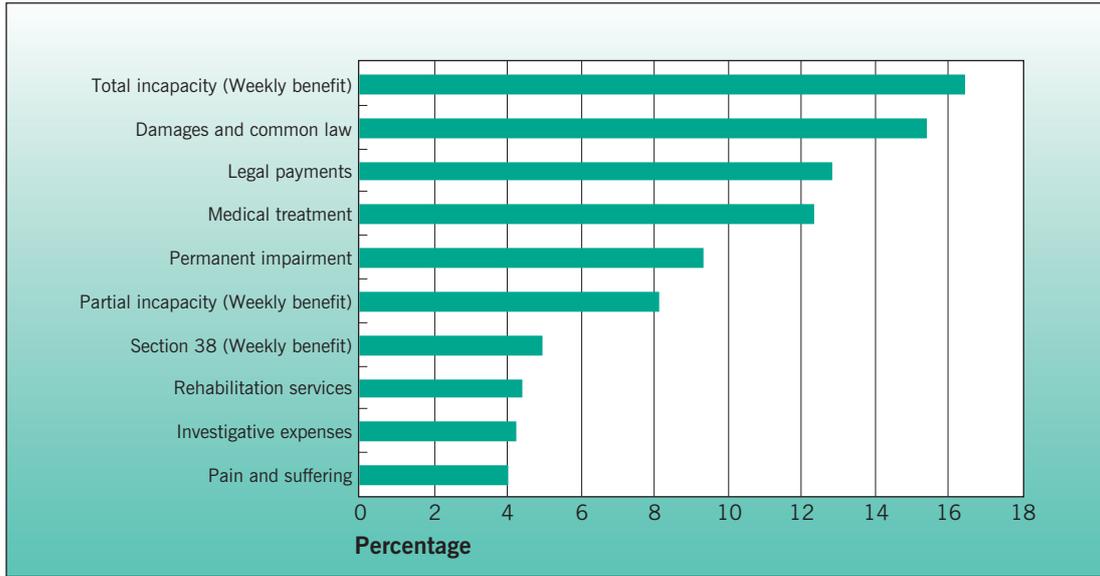

Workplace injuries represented 76 per cent of payments while occupational diseases accounted for 14 per cent. The remaining 10 per cent were payments for other work-related injuries.

#### Payment type breakdown 2003/04

Figure 54 illustrates the percentages of different types of payments in 2003/04. The largest payment category in 2003/04 was weekly benefits for total incapacity at \$460 million. Other categories with large payments were common law damages at \$432 million, legal payments at \$385 million, medical treatment at \$345 million and permanent impairment at \$262 million.

### Payments

Figure 54: Proportion of payment type 2003/04

#### Percentage change in payments since 2002/03

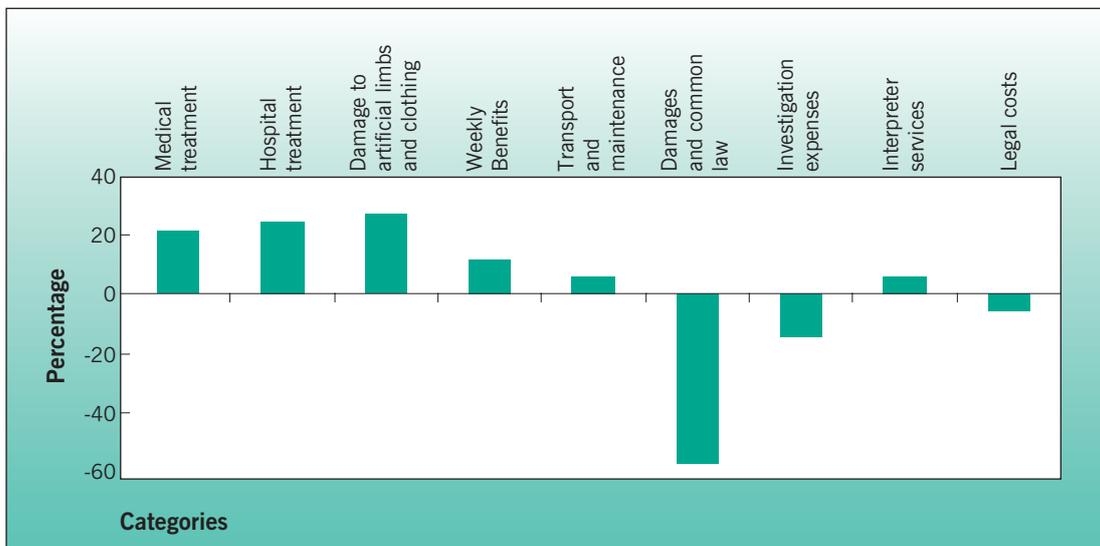

There were reductions in payments in 2003/04 for common law damages by 57 per cent, investigation expenses by 16 per cent and legal payments by six per cent over 2002/03. Common law claims lodged after 27 November 2001 generally obtained damages for economic loss. Further restrictions were imposed in terms of eligibility criteria. As a result, it was expected that common law payments would decrease.

The reforms reduced legal payments and investigation expenses because of:

- caps on legal costs
- mediation of disputes through the Workers Compensation Commission
- assessments of severity based on whole person impairment, leaving less room for disputes.

The payments for both medical and rehabilitation treatment increased in 2003/04 by 21 per cent and 10 per cent respectively.

Figure 55: Percentage change in payments 2002/03 to 2003/04

**Nature of injury/disease 2003/04**

Figure 56 shows sprains and strains accounted for 58 per cent of total payments in 2003/04, followed by eight per cent for fractures, and five per cent for contusions and mental disorders.

**Figure 56: Total payments by nature of injury/disease 2003/04**

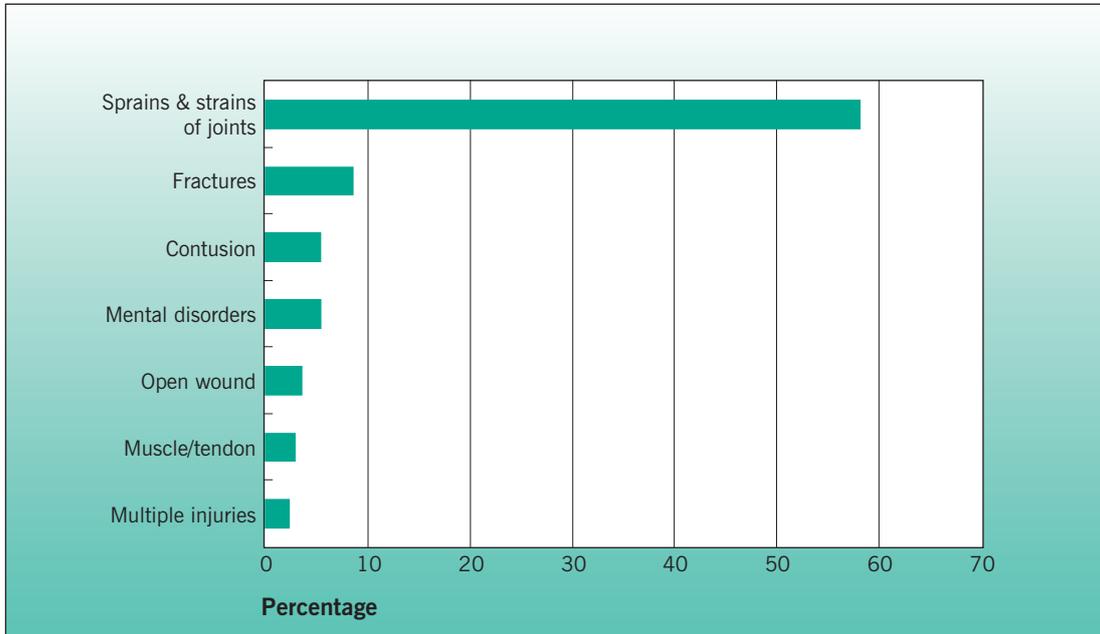

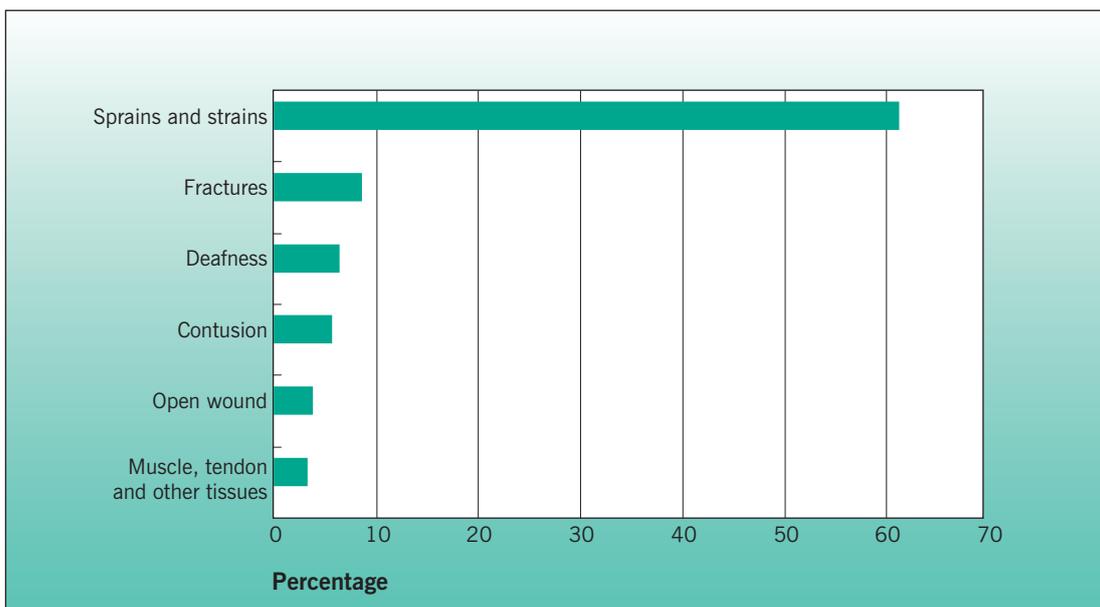

Figure 57 shows that the most common injuries/diseases for permanent impairment payments in 2003/04 were for sprains and strains of joints and adjacent muscles. These totalled 61 per cent of permanent impairment payments at \$160 million. The second largest payment was eight per cent for fractures at \$22 million, followed by six per cent for deafness at \$16 million. Collectively, these categories account for 75 per cent of payments for permanent impairment.

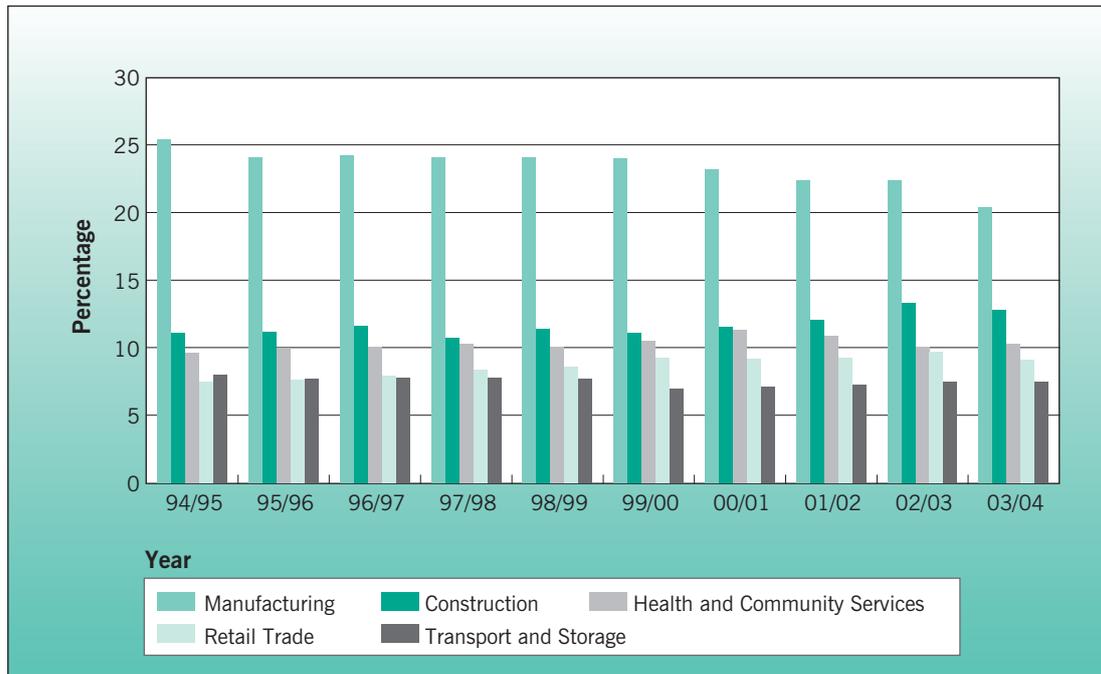

**Figure 57: Nature of payment for permanent impairment 2003/04**

#### Payments by industry

In 2003/04, the manufacturing industry was responsible for the bulk of payments for injury and diseases at \$572 million or 20 per cent of total payments. This was a significant reduction from 2002/03. The second highest payments were for the construction industry at \$360 million or 13 per cent of total payments. Health and community services payments were \$290 million, around 10 per cent (see Figure 58).

**Figure 58: Percentage of payments by top five industries 1994/95 to 2003/04**

# appendix A

---

## incidence rate calculation

---

***The incidence as used in this publication is expressed as the rate per 1,000 employees exposed to risk, calculated as follows:***

$$\frac{\text{Number of employment injuries and diseases}}{\text{Number of employees}} \times 1,000$$

### Methodology

Data on employed wage and salary earners obtained from the monthly Labour Force Survey, conducted by the Australian Bureau of Statistics, has been used for calculating the number of employees (denominators). This data has been adjusted as far as possible to match the scope of the WorkCover Scheme by excluding Commonwealth employees.

To more correctly reflect the scope of the WorkCover Scheme, the following adjustments to the Labour Force Survey data should be made but cannot be as the necessary data is not available:

- inclusion of the self-employed category of workers who are deemed workers under the *Workers Compensation Act 1987*
- exclusion of casual employees not covered by the *Workers Compensation Act 1987*.

### Reliability and limitations

Calculation of incidence rate is limited by the availability of matching denominator data. Whereas the number of injured workers can be accurately determined, the number of workers exposed to risk can only be approximated. Ideally, the number of workers should be the average annual number of workers who are covered by the WorkCover Scheme and could potentially suffer an employment injury. Averaging the monthly employment figures of workplaces covered by the scheme over the year, and classifying these workers by sex, industry and occupation in the same way as workers appearing in the numerator could achieve this. As this data is not available, the Australian Bureau of Statistics has determined a methodology providing approximate figures.

Reliability of incidence rate statistics depends on the degree of difference between the scope of the workers compensation and Labour Force Survey data. The most significant difference is in the treatment of self-employed persons deemed workers under the Act. Injuries to these workers are included in the number of injuries (the numerator), but the number of workers is excluded from the denominator, being employed wage and salary earners.

The effect of this difference in scope is unevenly distributed among different industry and occupation groups. For example, the construction industry has a high proportion of self-employed persons deemed workers under the *Workers Compensation Act 1987*. As these workers are included in the numerator but excluded from the denominator, the calculated incidence rate will be higher than the true incidence rate.

## Incidence Rate Calculation

Also affecting reliability of incidence rate statistics is the exclusion of Commonwealth employees. As estimates of these cannot be identified from the Labour Force Survey, they are obtained from another Australian Bureau of Statistics survey, the Survey of Employee Earnings and Hours. These surveys differ in a number of significant aspects, such as scope, coverage, concepts and definitions, and collection methodology. Using estimates from one survey to adjust estimates from another slightly increases the relative standard error of the estimates of the number of workers.

### Sampling errors

As the estimates of the number of employees classified by industry and occupation are obtained from a sample survey (the Labour Force Survey) they are subject to sampling error which occurs by chance because the data was obtained from a sample and not the entire population.

The standard errors for Labour Force Survey estimates can be used to provide a measure of the sampling errors associated with the incidence of injuries.

Relative standard error is the standard error expressed as a percentage of the estimate. Incidences with a relative standard error greater than 25 per cent should be treated with caution and therefore are not shown in this publication.

The relative standard error can be used to indicate the accuracy of the incidence rate as follows. There are two chances in three that the true incidence rate lies in the range rate  $\pm$  (relative standard error  $\times$  rate), and there are 19 chances in 20 that the true rate is in the range rate  $\pm 2$  (relative standard error  $\times$  rate).

Because the standard error increases as the size of the estimate increases and the relative standard error decreases, larger estimates are relatively more reliable than smaller ones. In the case of incidence, the size of the relative standard error is a function of the size of the labour force estimate of workers on which it is based, not the size of the rate itself or the number of injuries which is not subject to sampling error.

### Example calculation

The incidence of employment injury in the manufacturing industry in 2002/03 was 28.9 and the relative standard error of this rate is 6.53 per cent. Therefore, there are two chances in three that the true rate is in the range:

$$28.9 \pm (6.53\% \times 28.9)$$

or

$$28.9 \pm 1.9$$

There are 19 chances in 20 that the true rate is in the range:

$$28.9 \pm (2 \times (6.53\% \times 28.9))$$

or

$$28.9 \pm 3.8$$

# appendix B

---

## glossary

---

### **Age**

The claimant's age when the injury occurred or when the disease was first reported to the employer.

### **Agency of injury/disease**

The object, substance or circumstance that was principally involved in, or most closely associated with the point at which things started to go wrong and which ultimately led to the most serious injury.

### **Average**

The average of a set of data is the sum of all the data values divided by the number of data values.

See also median.

### **Bodily location of injury**

The part of the body affected by the most serious injury sustained or suffered by the claimant.

### **Breakdown agency**

The object, substance or circumstance that was principally involved in, or most closely with, the point at which things started to go wrong and which ultimately led to the most serious injury or disease.

### **Compensation payments**

See payment types.

### **Disease**

See occupational diseases

### **Employment injuries**

Injuries resulting from accidents, and all occupational diseases contracted or aggravated out of or in the course of a worker's employment.

### **Incident**

See type of occurrence classification system.

### **Workplace injuries**

Injuries at the workplace, either during work or a work break, and when the worker's activity is under the control of an employer. Also included in this category are injuries that occurred while the employee was working at a location other than their normal workplace or base of operations.

### Other work related injuries

Involve injuries away from the workplace when the worker is considered on duty or off duty. There are three categories:

- road traffic accidents resulting in injury (whether as a driver, passenger or pedestrian) arising out of, or in the course of employment, other than those which occur while commuting (see below). The accident can involve a motor vehicle, bicycle or other vehicle on a public highway or street as defined in the *Motor Accidents Act 1988*
- accidents away from work during a recess period when worker has attended the place of employment and is temporarily absent on that day during an ordinary recess or authorised absence
- commuting accidents either during travel between residence and workplace, or to educational institutions for training associated with the worker's employment, or to medical treatment for a compensable injury. This category includes road traffic accidents while commuting.

### Occupational diseases

Diseases contracted or aggravated in the course of employment and to which the employment was a contributing factor. Occupational diseases are distinguishable from workplace and other work related injuries by at least one of the following characteristics:

- the slow and protracted nature of its cause
- the result of a single traumatic event, for example the development of hepatitis following a single exposure to the infection or the development of conjunctivitis after being exposed to a welding flash
- repeated or continuous action of a mechanical, physical or chemical nature, not the effect of a single event but a cause acting imperceptibly and constantly
- the uncertain time of its beginning
- a possible predisposition to the development of the condition.

### Extent of disability

The long-term effect of the employment injury. Extent of disability reflects the situation at the end of the financial year in which the injury was originally reported. If in subsequent years the extent of disability changes, for example from permanent disability to fatal, the final extent of disability will not be recorded in these statistics. Extent of disability is divided into the following categories:

- **fatal employment injury** –resulting in the death of the injured worker. This category includes workers killed at work and when a worker subsequently dies of injuries received at work, except when the death occurs after the end of the financial year in which the workers compensation claim was originally reported as non-fatal
- **permanent disability** – makes the worker either totally or partially permanently incapacitated for any type of work. Partial disability is the partial or complete loss of, or loss of the use of, any part of the body faculty, resulting in a permanent diminution of the person's earning capacity or opportunities for employment, although they may still be able to work
- **temporary disability** – does not result in death or permanent disability. In this publication, temporary disability cases are divided into those resulting in six months or more off work and cases resulting in less than six months off work.

### Fatalities

See extent of disability.

### Frequency rate

Frequency rate is the number of employment injuries per million hours worked.

$$\frac{\text{Number of employment injuries}}{\text{Number of hours worked by employees}} \times 1,000,000$$

### Gross incurred cost

The sum of payment plus an estimate of future liability if the claim is still open at the end of the current financial year.

### Incidence rate

Except for Section 2, incidence rate is the number of major injuries per 1,000 employees exposed to risk.

$$\frac{\text{Number of employment and diseases}}{\text{Number of employees}} \times 1,000$$

In Section 2, the incidence rate for fatalities is for 100,000 employees.

### Industry

Refers to the industry of the establishment at which the worker was employed at the time the injury occurred.

For injuries reported from 1 July 1997, industries were classified according to the *Australian and New Zealand Standard Industrial Classification* (ANZSIC) (1993 edition) ABS Catalogue No. 1292.0. Prior to 1 July 1997 industries were classified according to the *Australian Standard Industrial Classification* (ASIC) (1983 edition) ABS Catalogue No. 1201.0.

The industry codes of the ANZSIC and the ASIC are hierarchical and consist of categories at four levels: divisions, subdivisions, groups and classes. Divisions are often referred to as '1-digit' code, subdivisions as '2-digit' code, groups as '3-digit' code and classes as '4-digit' code under this hierarchy.

See Appendix C for more about the classification.

### Injury

See employment injuries.

### Lump sum payments

The sum of payments for commutations, pain and suffering and permanent impairment.

### Manual handling

Any activity requiring the use of force exerted by a person to lift, lower, push, pull, carry or otherwise move, hold or restrain any animate or inanimate object. It comprises of the Mechanism of Injury/Disease Codes of 41: Muscular stress while lifting, carrying or putting down objects and 42: Muscular stress while handling objects other than lifting, carrying or putting down, as defined by the *Type of Occurrence Classification System 2nd Edition (Revision 1)* NOHSC Canberra 2002.

### Mechanism of injury/disease

The action, exposure or event that was the direct cause of the most serious injury, for example fall, hit by moving object, contact with electricity.

### Median

The mid point of an ordered set of data.

### Nature of injury/disease

The most serious injury sustained or suffered by the claimant.

### Nature of occurrence

Whether the injury is a workplace injury, other than related injury or occupational disease.

See employment injuries.

### Non-compensation payments

See payment types.

### Other work related injuries

See employment injuries.

### Occupation

Occupation data has been classified according to the *Australian Standard Classification of Occupations* (ASCO 2nd Edition) ABS Catalogue No. 1220.0.

The occupation codes of the ASCO are hierarchical and grouped in four levels: major groups, minor groups, unit groups and occupation. These four levels are represented by a six-digit code.

Worker compensation claims are coded using the first four digits of the classification and therefore the finest level to which they are coded is unit groups. Major groups are often referred to as '1-digit' code, minor groups as '2-digit' code and unit groups as '4-digit' code under this hierarchy..

See Appendix C for more about the classification

### Payment types

For the full legal definition of the following payment types, refer to the *Workers Compensation Act 1987*.

Compensation payments relate to all lump sum and weekly payments for employment injuries and comprise payments for the following:

- ambulance service
- commutations – up front lump sum payment to an injured worker in place of continuing weekly compensation award and future medical and hospital expenses
- chiropractic treatment
- damage to artificial limbs and clothing
- death
- hospital treatment
- medical treatment
- permanent impairment injury – lump sum payment for the permanent loss or impairment of a specified bodily function or limb, or severe facial or bodily disfigurement
- pain and suffering – lump sum payment for pain and suffering related to a permanent impairment
- partial incapacity – (a) weekly benefit paid to an injured worker under Section 38 of the *Workers Compensation Act 1987*, when a worker is partially incapacitated for work as a result of an injury, but is not suitably employed during any period of that partial incapacity for work
- partial incapacity – (b) weekly benefit (make up pay) paid to an injured worker under Section 40 of the *Workers Compensation Act 1987* when the worker is partially incapacitated and can only do some of the work requirements of their previous position or is unable to continue with all of the duties working at a slower rate and earning less money
- Physiotherapy treatment
- rehabilitation treatment
- total incapacity – weekly benefit paid to an injured worker who is totally incapacitated and unable to perform any work at all.

### Non-compensation payments

These include all payments for expenses associated with a claim and are as follows:

- damages and common law - amounts paid in addition to compensation payments for damages and legal costs under common law
- interpreter services – amounts paid to any approved interpreter service for English language assistance to the claimant
- investigation expenses – amounts paid to any medical practitioner, investigator or assessor to prove the validity of a claim
- legal costs – incurred in handling the claim and those incurred by the claimant
- transport and maintenance - expenses related to travelling costs incurred by the worker attending medical examinations or court hearings when required to do so by the insurer or WorkCover.

### Permanent disability

A permanent disability is one where the worker is either totally or partially permanently incapacitated for any type of work. Partial disability is the partial or complete loss of, or loss of the use of, any part of the body faculty, resulting in a permanent diminution of the person's earning capacity or opportunities for employment, although they may still be able to work.

### Road traffic accidents

Road traffic accidents comprise all injuries resulting from accidents, and all occupational diseases contracted or aggravated out of or in the course of a worker's employment.

### Temporary disability

A temporary disability does not result in death or permanent disability. In this publication, temporary disability cases are divided into those resulting in six months or more off work and cases resulting in less than six months off work.

### Time lost

The total number of weeks the claimant was off work due to the injury, plus an estimate of future time off work if the claim is still open at the end of the current financial year.

Time lost is only reported for temporary disability cases. It is recorded as calendar days and converted to weeks by dividing by seven. If a claimant has been off work for more than three years, the time lost data is not included in this publication.

It is important not to confuse the terms time lost and period paid for total incapacity. Period paid for total incapacity refers to the actual number of days for which compensation payments were made. This definition is used to determine whether a claim is included in this publication. Time lost includes the period paid for total incapacity and may also include weekends, holidays or other days when compensation payments were not made.

### Type of occurrence classification system

The classification used for the following is *Type of Occurrence Classification System 2<sup>nd</sup> Edition (Revision 1)* NOHSC Canberra 2002:

# appendix C

## classifications

### Bodily location of injury/disease

#### Group 1 Head

- 11 Cranium
- 12 Eye
- 13 Ear
- 14 Mouth
- 15 Nose
- 16 Face, not elsewhere classified
- 18 Head – multiple locations
- 19 Head – unspecified locations

#### Group 2 Neck

- 21 Neck

#### Group 3 Trunk

- 31 Back – upper or lower
- 33 Chest (thorax)
- 34/35 Abdomen and pelvic region
- 38 Trunk – multiple locations
- 39 Trunk – unspecified locations

#### Group 4 Upper limbs

- 41 Shoulder
- 42 Upper arm
- 43 Elbow
- 44 Forearm
- 45 Wrist
- 46 Hand, fingers and thumb
- 48 Upper limb – multiple locations
- 49 Upper limb – unspecified locations

#### Group 5 Lower limbs

- 51 Hip
- 52 Upper leg
- 53 Knee
- 54 Lower leg
- 55 Ankle
- 56 Foot and toes
- 58 Lower limb – multiple locations
- 59 Lower limb – unspecified locations

#### Group 6 Multiple locations

- 61 Neck and spine

- 62 Head and neck
- 63 Head and other
- 64 Trunk and limbs
- 65 Upper and lower limbs
- 66 Neck and shoulder
- 68 Other specified multiple locations
- 69 Unspecified multiple locations

#### Group 7 Systemic locations

- 71 Circulatory system
- 72 Respiratory system
- 73 Digestive system
- 74 Genitourinary system
- 75 Nervous system
- 78 Other and multiple systemic conditions
- 79 Unspecified systemic conditions

#### Group 8 Non-physical locations

- 80 Psychological system

#### Group 9 Unspecified locations

- 90 Unspecified locations

### Mechanism of injury/disease

#### Group 0 Falls, trips and slips of a person

- 01 Falls from a height
- 02 Falls on the same level
- 03 Stepping, kneeling or sitting on objects

#### Group 1 Hitting objects with a part of the body

- 11 Hitting stationary objects
- 12 Hitting moving objects
- 13 Rubbing and chafing

#### Group 2 Being hit by moving objects

- 21 Being hit by falling objects
- 22 Being bitten by an animal
- 23 Being hit by an animal
- 24 Being hit by a person accidentally
- 25 Being trapped by moving machinery or equipment
- 26 Being trapped between stationary and moving objects

## Classifications

|  |   |  |   |
|--|---|--|---|
| 28   | Being hit by moving objects   |  |   |
| 29   | Being assaulted by a person or persons  |  |   |

## summary of changes

---

### ***Influences on claims statistics: Legislative changes 1989/90 to 2002/03***

*The following is a summary of changes influencing claim and costs for workers compensation in NSW since the new scheme came into operation on 30 June 1987.*

#### **1989/90**

- Statutory benefits for seriously injured workers and their dependants increased as from 30 June 1989. Compensation to families for the death of a worker increased by over 70 per cent to \$150,000 (indexed) from 30 June 1989.
- Increase in benefits in case of death, loss of bodily function and partial incapacity from June 1990.
- Limited common law rights for seriously injured workers re-introduced from 1 February 1990.
- Limited rights of common law action against negligent employers reinstated. Threshold for retrospective common law benefits reduced from 60 per cent to 33 per cent for workers injured between 1987 and 1989. Commenced 1 February 1990.
- Restrictions introduced in certain circumstances for claims for workers compensation relating to journey injuries. Introduced lump sum compensation for severe bodily disfigurement. Commenced 31 March 1990.

#### **1990/91**

- Improved common law entitlements of workers injured between 1987 and 1989 by reducing the 60 per cent disability threshold applicable to their claims to the same level (33 per cent) as that applicable to later matters. Also extended the time limit for bringing retrospective common law claims. Commenced 1 February 1990.
- Adjusted prescribed weekly rate of compensation payable to workers not covered by industrial awards. Commenced 1 October 1990 and 1 April 1991.
- The rates payable for treatment at private hospitals for injured workers increased and a new patient classification for intensive care cases commenced 6 July 1990 and further increased from 15 March 1991.

#### **1991/92**

- Increased from \$616.40 to \$1,000 the indexed ceiling on weekly benefits for the first 26 weeks of weekly benefits for total incapacity for any period of incapacity after the commencement of the amendment, and similarly increased the ceiling applicable to weekly make up benefits for partially incapacitated workers. Commenced 1 February 1992.
- Injured workers receiving total incapacity benefits for more than 6 months received a 20 per cent increase on weekly benefits from 1 February 1992.
- Increased by 25 per cent the maximum lump sums for permanent loss injuries, pain and suffering and death (applicable to injuries and death, respectively, occurring after the commencement date). Commenced 1 February 1992.

- Maximum amount of damages that may be awarded for non-economic loss such as pain and suffering in respect of a work related injury arising on or after 1 February 1992 increased by approximately 13 per cent. Commenced 1 February 1992.
- Lowered the threshold of disability over which access to damages for economic loss is available to workers from 33 per cent to 25 per cent. Pro rata reductions were applied to the deductibles for non-economic loss. Commenced 1 February 1992.
- Increased by 20 per cent the statutory rate of weekly compensation after the first 26 weeks for any period of incapacity after the commencement of the amendment, with related increases in amounts for dependants (and similarly in weekly payments for dependent children of deceased workers). Commenced 1 February 1992.
- Increased from \$10,000 to \$50,000 the maximum amounts for medical and hospital expenses. Increased maximum amount that an employer is liable for an injured worker's ambulance services from \$5,000 to \$10,000. Increased from \$300 to \$600 maximum amount that an employer is liable for damage to an injured worker's clothes, resulting from a work-related accident. Increased from \$500 to \$2,000 maximum amount that an employer is liable for damage to an injured worker's crutches, artificial limbs, other artificial aids and spectacles. Commenced 1 February 1992.

### 1992/93

- Current weekly wage rate for 'non-award' workers who became entitled to receive weekly payments in respect of incapacity for work before 1 February 1992 indexed by amending regulations in October 1992 and April 1993.

### 1993/94

- Common law entitlements were improved from 2 May 1994 by removing the 'verbal threshold' for damages for non-economic loss and the six months threshold for coverage of family-provided home care, and clarifying that the cost of necessary respite or relief care for seriously injured claimants is recoverable.
- Clarification of the operation of the Table of Disabilities to avoid anomalous situations where an injured worker may have been able to claim twice for the loss of function extending to the upper part of the arm or leg. Commenced 2 May 1994.
- The special section 38 weekly benefit period for unemployed partially incapacitated claimants extended to 104 weeks and arrangements simplified from 1 September 1994.
- Unemployed claimants to be assessed on the same basis as employed section 40 claimants. The maximum Table of Disability benefits for facial and bodily disfigurement increased significantly. Removed the 18 months time limit for commencement of common law proceedings. Commenced 1 September 1994.

### 1994/95

- The liability of employers for rehabilitation costs increased from \$1,200 to an indexed amount of \$1,500 from 15 July 1994.

### 1995/96

- The amounts payable by employers for treatment of workers at private hospitals increased from 2 July 1993.
- Increased current weekly wage rate for certain workers who became entitled to receive weekly payments in respect of incapacity for work before 1 February 1992 by indexation in April 1993 and October 1993.
- Ensured entitlement to total incapacity benefits for up to 26 weeks are preserved if a worker is partially incapacitated and, for example, returns to work then suffers a recurrence and is totally incapacitated for work. Commenced 1 September 1995.

## Summary of Changes

- Clarification of power of conciliation officers to direct payment of compensation where there is no genuine dispute and other related matters. Commenced 1 September 1995.
- Claims for hearing loss required to be made 3 months prior to the commencement of litigation in respect of the claim, to allow opportunity for establishing whether there is a dispute and reference of the matter to a medical panel if necessary. Commenced 1 September 1995.
- Certain weekly compensation benefits automatically updated by award and similar increases as from 1 September 1995.
- Existing limitation of weekly earnings for the purposes of award of damages for economic loss clarified from 1 September 1995 as being applicable to net (rather than gross) weekly earnings.
- Imposed a six per cent threshold for industrial deafness claims. Commenced 10 November 1995.
- Indexation of lump sums under section 66 and section 67 frozen and interest abolished on those claims from 1 January 1996.
- Restrictions imposed on stress claims as from 1 January 1996.
- Interest on common law damages for work injuries restricted as from 1 January 1996.
- Time limit for the lodgement of claims tightened from 1 January 1996 to be three years after injury unless there are exceptional circumstances.
- Workers required to lodge their claim with their employer/insurer three months before litigation can be commenced for a lump sum under the Table of Disabilities, effective from 1 January 1996.
- Froze indexation of lump sums under s.66 and s.67 and abolished interest on those claims. Commenced 1 January 1996.
- Introduced lump sum compensation for workers who contract HIV/AIDS or suffer severe permanent bowel injury in the course of employment. Commenced 1 January 1996.

## 1996/97

- Entitlement to workers compensation restricted to injuries where the workers' employment is a substantial contributory factor as from 12 January 1997.
- No fault workers compensation coverage for journey claims between home and work restored except for serious and wilful misconduct by the worker (eg where drugs or alcohol contributed to the injury) as from 12 January 1997.
- Review of weekly compensation claims after two years of payments introduced, with possible discontinuation of further payments, effective from 12 January 1997.
- Reduction by 25 per cent of the maximum lump sum benefits payable for permanent disability and associated pain and suffering as from 12 January 1997.
- Deducted pre-existing disabilities from the assessment of lump sum compensation for permanent injuries (by extending an existing provision that had applied only to back, neck and pelvis injuries). Commenced 12 January 1997
- Increase to \$5,000 of the maximum penalty for failure by an employer to keep a register of workplace injuries as from 12 January 1997.
- Earlier amendments strengthened from 12 January 1997 to prevent unfair marketing of practices to encourage industrial deafness claims.

## 1997/98

- Arrangements put in place for full operation of the new Workers Compensation Resolution Service from 1 August 1998. (All claims made from 1 March 1998 to be the responsibility of the new service.)
- Advertising in the area of workers compensation by lawyers and agents regulated as from 15 December 1997 (applying to any advertisements published more than two months after that date).
- Fixed the maximum costs payable to a legal practitioner for various legal services provided in connection with the conciliation of a dispute. Commenced 1 August 1998.

## 1998/99

- Workers Compensation Advisory Council of NSW formally established as from 1 August 1998.
- Premium Rating Bureau of NSW established from 1 August 1998 to determine annual premium assessment methods on which insurers must base their rates under new private underwriting system, provide advice on scheme performance and assist in developing workers compensation industry standards.
- Industry Reference Groups established from 1 August 1998 to develop industry specific strategies to improve injury prevention, injury management and workers compensation outcomes, and to give practical advice to workers and employers from 1 August 1998.
- All licensed insurers required to establish injury management programs that integrate all aspects of injury management as from 1 September 1998.
- Injured workers required to notify employer as soon as possible and employers required to notify the insurer within 48 hours (for significant injuries resulting in incapacity for seven days) or within seven days for other injuries as from 1 September 1998.
- Insurers to initiate action under their injury management program, through consultation with workers, employers and doctors, within three days of being notified of a significant injury and to establish an injury management plan for the worker as from 1 September 1998.
- Both the injured worker and the employer required to participate and cooperate in the establishment of, and compliance with, the injury management plan for the worker as from 1 September 1998.
- All employers are required to have a return-to-work program, as from 1 September 1998.
- Sanctions introduced for non-compliance with injury management provisions by insurers, employers and injured workers as from 1 September 1998.
- Weekly benefits for unemployed partially unfit workers during job-seeking and rehabilitation reduced from 104 weeks to 52 weeks, effective from 1 August 1998.
- Discontinuation of weekly payments for partially incapacitated workers after 104 weeks if they are still not seeking employment facilitated as from 1 August 1998.
- Restrictions on the circumstances in which weekly payments of compensation may be committed to a lump sum payment removed as from 1 August 1998.
- Reduction in the weekly 'make-up' compensation for partially incapacitated workers who have unreasonably rejected suitable employment. Commenced 1 August 1998.
- Time limits for making a claim strengthened. Claims to be made within three years, with later claims allowed only where serious and permanent disablement or death. Commenced 1 August 1998.

## 1999/2000

- Clarification of GST liability in relation to late premium payments.
- Clarification that a policy of insurance does not cover an employer's liability for GST payable on the settlement of a claim.
- Provision for the application of GST in relation to premiums paid for and liabilities under policies of insurance.
- Clarification that an employer's record of the wages for an employee is not required to include a record of any GST component in a payment to a worker.
- Allow certain employers, as an alternative to employing a person to be a return-to-work coordinator, to engage a person for that purpose under other types of work arrangement (such arrangements include sharing of the services of a person among a number of employers or arrangements with a person or organisation that provides return-to-work coordinator services).
- Enable groups of 2 or more employers that have engaged a return-to-work coordinator on a shared basis to establish a single return-to-work program for those employers in accordance with WorkCover Authority guidelines.

- Increased certain prescribed amounts, relating to maximum reasonable funeral expenses and compensation for travel associated with treatment or service, as a consequence of the introduction of the GST.
- Amended the definition of “deemed premium income” for the purposes of self-insurer’s contributions to the WorkCover Authority Fund to take account of amounts attributable to the GST.

### 2000/2001

- Provided new provisions in relation to commutations.
- Subsequent claims for compensation allowed to be made directly to the workers compensation insurer.
- Introduced changes to the election provisions so that the injured worker will have made an election by accepting statutory lump sum compensation or common law damages, or by starting proceedings for damages or for statutory compensation.
- Enabled the Compensation Court to authorise payments of compensation to a beneficiary (or to another person on behalf of the beneficiary) rather than to the Public Trustee for the benefit of the beneficiary.
- Introduced a new business classification system based on National ANZSIC system known as the NSW WorkCover Industry Classification System (WIC).
- Provided for the specification of the indexation number that is used in the indexation of benefits payable under the Workers Compensation Act 1987 in line with ABS award rates of pay.
- Increased the amounts specified in that Regulation that are payable to a legal practitioner or agent as costs for legal or agent services associated with conciliation conferences.
- Commutation application must be lodged with the Workers Compensation Commission, having met the following criteria;
  - The claim must be two years from date of injury;
  - All opportunities for injury management have been exhausted;
  - The worker has a 15 per cent permanent impairment; and
  - The worker has been receiving weekly benefits for six months.

### 2001/2002

- Minor amendments to the NSW WorkCover Industry Classification System (WIC), introduced in 2001/2002.

### 2002/2003

- Streamlined notification/claims processing (Section 267 Workplace Injury Management and Workers Compensation Act 1998). These provisions allow insurance companies to begin weekly compensation payments and injury management within seven calendar days of initial injury notification, except where there is a “reasonable excuse”.

### 2003/2004

#### Workers Compensation Amendment Regulation 2003

- Allows exempt contracts by farmers for farm work from the operation of a new section 175A of the *Workers Compensation Act 1987*
- Provides new provisions relating to the definition of wages in the *Workers Compensation Act*.

#### Workers Compensation Amendment (Injury Notification) Regulation 2003

- Requires notification of workplace injury to a workers compensation insurer and WorkCover.

### Insurance Premiums Order 2003-2004 Amendment (Wages) Order 2003

- Allows to exclude a motor vehicle allowance, or accommodation allowance from the amount of wages in calculating a workers compensation insurance premium.

### Insurance Premiums Order 2003-2004 Amendment (Motor Vehicle Allowances) Order

- Provides the way in which motor vehicle allowances may be excluded from calculation of wages

### Workers Compensation (Car Travel Allowance) Order

- Provides the rate to calculate the cost of travel by private motor vehicle for the purpose of the inclusion of an amount for that travel in the compensation payable to an injured worker

(a) Inc. (Incidence rate) is the number of injuries per 1,000 employees

(b) Frequency rate is the number of injuries per million hours worked

(c) Time lost is included only for temporary disability cases resulting in less than 3 years off work

(d) Includes cases for which nature of occurrence was unknown

Table 1.2 Employment Injuries

Nature of Occurance by Extent of Severity: 1996/97 to 2003/04

| Year                      | Fatal          | Permanent disability | Temporary Disability |                    | Total (c)     | Inc. (a)      | Time lost (weeks) (b) |                |            | Gross Incurred Cost (GIC) |                |               |              |

(a) Inc. (Incidence rate) is the number of injuries per 1,000 employees  
 (b) Frequency rate is the number of injuries per million hours worked  
 (c) Time lost is included only for temporary disability cases resulting in less than 3 years off work

Table 1.5 Employment Injuries

Industry Statistics: Number, Incidence, Time Lost and Cost: 2003/04

| Industry                                      | Temporary Disability |                      |                   |                    |              |             | Time lost (weeks) (c) |               |            | Gross Incurred Cost (GIC) |                |               |               |

(a) Inc. (Incidence rate) is the number of injuries per 1,000 employees  
 (b) Frequency rate is the number of injuries per million hours worked  
 (c) Time lost is included only for temporary disability cases resulting in less than 3 years off work  
 (d) Includes cases for which extent of severity is unknown  
 n.a. Not applicable  
 n.p. Not published  
 \* Relative Standard Error (RSE) exceeds 25%.

Table 1.6 Employment Injuries

(a) Inc. (Incidence rate) is the number of injuries per 1,000 employees

(b) Frequency rate is the number of injuries per million hours worked

(c) Time lost is included only for temporary disability cases resulting in less than 3 years off work

(d) Includes cases for which extent of severity is unknown

n.a. Not applicable

n.p. Not published

Table 3.1 Workplace Injuries

Industry Statistics: Number, Incidence, Time Lost and Cost: 2003/04

(a) Inc. (Incidence rate) is the number of injuries per 1,000 employees

(b) Frequency rate is the number of injuries per million hours worked

(c) Time lost is included only for temporary disability cases resulting in less than 3 years off work

Table 4.1 Occupational Diseases

(a) Inc. (Incidence rate) is the number of injuries per 1,000 employees

(b) Frequency rate is the number of injuries per million hours worked

(c) Includes stress cases

n.p. Not published

Table 4.6 Occupational Diseases

Nature of Disease: Number, Incidence by Industry (Selected Diseases): 2003/04

(a) Inc. (Incidence rate) is the number of injuries per 1,000 employees

(b) Frequency rate is the number of injuries per million hours worked

(c) Includes cases for which nature of occurrence was unknown

Table 5.1 Other work-related injuries

(a) Inc. (Incidence rate) is the number of injuries per 1,000 employees  
 (b) Frequency rate is the number of injuries per million hours worked  
 (c) Time lost is included only for temporary disability cases resulting in less than 3 years off work  
 \* Relative standard error exceeds 25%
