THE

SYDNEY HARBOUR TRUST COMMISSIONERS

TWENTY-SEVENTH REPORT

BEING FOR THE

YEAR ENDED 30th JUNE, 1927.

Printed under No. 3 Report from Printing Committee, 24 November, 1927.

SYDNEY: ALFRED JAMES KENT, GOVERNMENT PRINTER.

—
1927.
[1s. 9d.]

46441 *80—a

Wheat Export.—The quantity of wheat exported during the year was 304,344 tons. Of this total, approximately 117,798 tons of bulk wheat were loaded at Glebe Island terminal elevator by thirty-seven vessels, and approximately 192,784 tons of bagged wheat from Glebe Island and Pyrmont in 138 vessels.

Wheat Loading Wharfage, Glebe Island.—The two new bagged wheat sheds at the outer extremity of the north-western side of Glebe Island which were mentioned in the previous report were completed during the year, and are now being closed in so that they may be utilised for general cargo when not required for wheat. These sheds have been equipped with seven sets of fixed conveyors, and ten sets of portable conveyors, which will permit of the transfer of grain from truck to shed, truck to ship, or shed to ship. Portion of the equipment was made available for use towards the end of the wheat season, and the trials at these preliminary shipments indicated that, even with the equipment not quite complete, it was possible for each unit of conveyors to load 1,000 bags per hour.

It is considered that the flexibility of the system is unrivalled in Australia, and, with its remote electrical control, automatic counters, and safety devices, it probably ranks very high amongst similar installations in any part of the world.

The construction and equipment of a sub-station and control house in connection with the working of the mechanical equipment of the sheds has also been completed. Seven small unloading sheds have also been provided at the back of the two main sheds for the protection during wet weather of wheat as it is discharged from trucks to conveyors.

An additional shed (384 ft. x 41 ft.) for the handling of bagged wheat is in course of erection at the south-western end of the Island, and will be equipped with twelve horizontal conveyors and four elevators, all portable.

The Commissioners desire to emphasise the great advantages which will be derived by the wheat export trade from the concentration of bulk and bagged facilities at Glebe Island. The convenience of having the bagged wheat sheds adjacent to the terminal elevator was very clearly evidenced during the preliminary trials, when ships were loaded in the forward hatches with bulk wheat at the same time as bagged wheat was shipped into their after hatches. The Commissioners anticipate that the new facilities will be seen to greater advantage when the system is put into fuller operation during the next wheat season.

The wharfage which had previously been erected on the eastern side of Glebe Island is being extended 400 feet in a southerly direction, and at the end of the year under review all the piles were driven and the headstocks and girders placed in position for a distance of 360 feet. This wharfage will complete 1,000 feet of berthing space on this side of the Island and will be used for the shipment of wheat, or, when not so required for general cargo.

Timber Trade.—Construction of the marginal wharfage on the northern foreshores of Rozelle Bay has been expedited, in furtherance of the scheme outlined in the previous report for meeting the demands of the timber trade. To date nearly 2,265 lineal feet of wharfage have been completed, and a beginning has been made on the construction of another 720 feet section.

Provision of accommodation for the handling of timber necessitated the reclaiming of a large area of land at the rear for yards and railway lines. The work was commenced during the previous year and this year some 300,000 cubic yards of spoil have been used for this purpose.

No. 34 Berth, Darling Harbour.—The old Federal Wharves, which have been in existence for very many years, are to be demolished to make way for a new and up-to-date structure. These wharves will be replaced by a modern jetty 300 feet long and 96 feet wide, to be probably equipped with a double-decked jetty shed 260 feet x 60 feet, and a double-decked shore shed 210 feet x 90 feet. A commencement has been made on the new jetty, and at the end of the year the piles had been driven a distance of 140 feet and the headstocks provided for 120 feet.

This jetty will possess a new feature of construction in that it will be provided with a concrete wharf deck throughout which it is anticipated will facilitate trucking and considerably reduce maintenance costs.

Nos. 38 and 39 Berths, Darling Harbour.—No 38 Jetty was completed during the year, but the completion of No. 39, which is to replace portion of the wharfage put out of commission by the reclamation at the head of Darling Harbour, is still held up pending completion of the water conduit for the Railway Commissioners' Power House at Ultimo.

Progress has, however, been made with the sea-wall behind Berths Nos. 37-39, and at 30th June trestles and plates had reached about half way across the back of No. 38 Jetty, a distance of 435 feet.

Jones Brothers' Coal, Limited.—The remodelling of the wharfage accommodation at the head of Darling Harbour rendered it necessary for Jones Brothers' Coal Limited to vacate the premises at the foot of Bathurst-street. The Company was granted another site at Blackwattle Bay and the Trust erected a wharf (252 feet x 130 feet), with a monier trestle sea-wall for the Company's use.

Extensive coal-bins were erected by the Company on the wharf at the new premises, and, as the Company had not the necessary facilities, the Commissioners undertook the driving of the requisite piles in connection with these bins at the cost of the Company.

Main Port Roadway, Hickson-road.—The extension of Hickson-road in the vicinity of the Grafton Bond for its full width to Sussex-street was continued, and about 90 per cent. of the excavation work has been carried out. Trachyte kerbing has been laid for a distance of 400 feet along the front of the Grafton Bond in preparation for the new concrete road, and ballasting operations have been put in hand by the City Council.

Remodelling of Grafton Bond.—The remodelling of the Grafton Bond consequent upon the widening of Hickson-road was further advanced by the demolition of the front portion of " E " Store, the erection of a new brick front, and the completion of a southern addition facing Sussex-street.

Parbury's Bond.—A considerable amount of work has been carried out at this Bond in connection with the installation of travelling cranes and the necessary runways. The cranes and runways have been installed, but certain of the electrical work yet remains to be done.

Nos. 1, 2, 3 and 4, Woolloomooloo.—A complete system of automatic fire-alarms was installed at these premises.

Lobnitz Plant.—The Lobnitz rock breaking plant purchased last year has been put into commission and during the present year a considerable quantity of rock has been broken and removed. The plant has realised the Commissioners' expectations and has been the means of economically removing rock at the face of wharf premises which would otherwise have been a protracted and expensive process.

Goat Island.—Activity in connection with the establishment of a general repair depot on the Island for the Trust's plant was continued. A broadside wharf (770 feet x 20 feet) had already been built, and during the current year alterations to old buildings to be used as workshops, also the construction of tramways, were completed.

New coal-bins have been erected on the western side, which will permit of the removal of the old and unsightly bins on the north-east end and improve the appearance of the Island.

Arrangements are also being made for the supply of electric current from the mainland for use in the workshops and the lighting of the Island.

The tidying up of the Island has been taken in hand, and a number of shrubs have been planted as part of a general beautification scheme.

Eastern Channel.—Towards the end of 1924 a commencement was made on a new cut designed to straighten out the course of the Eastern Channel at the entrance of the port and the suction dredge " Triton " is still engaged on the work, which will take some years to complete, and will greatly facilitate the navigation of vessels using the channel.

Vehicular Ferry Docks.—The vehicular ferry docks were originally designed and constructed for the accommodation of the wooden vehicular ferries engaged in the service, and for many years they amply met the demands made upon them. Latterly, however, much larger vessels constructed of steel, have been employed, and the impact of these heavy vessels damaged the sides of the docks to such an extent that it became imperative to strengthen them considerably and face them with armour plate to withstand the severe buffeting to which they are subjected.

City Railway.—The Commissioners understand that a further section of the City Railway, extending from the eastern side of Circular Quay to Wynward Square, is to be proceeded with at once. The proposed scheme involves the complete re-construction of the ferry jetties along the Quay front, and the removal of the Trust's offices.

The proposals of the Commissioners provide for the ultimate transposition of the Manly and Mosman-Cremorne services at Circular Quay, the Manly ferries transferring to No. 2 and the Mosman-Cremorne to No. 3. This alteration will obviate the crossing of the routes of these steamers and thus be a step in the direction of safer navigation in the fairway.

It is also intended to provide a pontoon at the new No. 3 jetty, which will bring it into conformity with all the other ferry jetties at Circular Quay.

Ferry Services.—During the year approximately 47,046,000 passengers were carried by the various ferry services as against 45,700,000 during the previous year.

Water Conduit for the Ultimo Power House.—The reclamation of the head of Darling Harbour necessitated the reconstruction and re-location of the existing intake conduit for the Ultimo Power House, and portion of the work was undertaken by the Trust, at the expense of the Railway Commissioners. The work was particularly difficult and of considerable magnitude. It entailed sinking a shaft down to the portion of the conduit already constructed by the Railway Department, and extending it by means of two lines of large concrete pipes, with screening chambers at the ends, beyond the reclamation and out to deep water. The work involved a good deal of coffer-dam construction and the employment of divers.

The conduit will eventually be covered by No. 39 Berth—Darling Harbour.

Petrol Electric Cranes.—During the previous year a petrol electric mobile crane was installed at the Jones Bay Berths with the idea, of increasing their efficiency by providing facilities for the expeditious handling of heavy goods. The benefit which it was anticipated would be derived has been fully realised, so much so that another crane of a similar type, but with a greater lifting capacity has been provided. In point of fact the usefulness of the berths for certain lines of cargo has been increased by about 50 per cent, and the experiment has been such a success that the Commissioners have decided to obtain additional cranes of this type.

The cranes already purchased are imported articles, but, as the result of the Commissioners' representations through the Chamber of Manufacturers and direct to various local manufacturers, they obtained a satisfactory tender for the supply of the cranes, and a contract has been entered into with a local firm for two more of these appliances.

Pollution of the Port.—For many years the pollution of the port and foreshores by fuel oil and oily refuse has caused the Commissioners serious concern. Despite the vigilance of their officers oily matter was discharged into the harbour from vessels, and a considerable amount of damage was done to public and private baths launches, yachts, and rowing boats. The statutory powers conferred on the Trust were limited, and it was extremely difficult to obtain evidence of such a nature as to secure a conviction.

Representations were accordingly made to the Government, which resulted in the passing of the Oil in Navigable Waters Act, 1927. This Act provides that if oil be discharged or allowed to discharge into the waters of any port in New South Wales, whether from any vessel or any land adjoining the waters, or from any apparatus used for the transfer of oil, the owner or master of the vessel, the occupier of the land, or the person having charge of the apparatus, as the case may be, would be guilty of an offence and liable to a penalty not exceeding one hundred pounds (£100). This provision removes certain disabilities under which the Trust laboured in the past and it is hoped that the enlarged statutory powers will enable the Commissioners to check the nuisance to a considerable extent, but the experience of the authorities at large ports in other parts of the world is that despite every effort it is practically impossible to stop this form of pollution entirely.

It is gratifying to be able to report that cases of pollution by shipping were not numerous during the year.

Industrial growth on the banks of the Parramatta River and its tributaries is also responsible for pollution in portions of the Port where there is little tidal scour. This class of pollution is less difficult to deal with than that caused by shipping, as the source can be more readily traced, and the factories responsible for the nuisance have readily adopted remedial measures in response to the Trust's representations.

Hydrographical Survey.—During the year several additional important sections of the Main Channels of the Port were surveyed.

A section of the Parramatta River from the Ryde Railway Bridge to the head of the tidal water (Charles Street, Parramatta)—in length about $4\frac{3}{4}$ miles, and in area about 400 acres—has been completed.

A survey of Duck River from its junction with the Parramatta River to Parramatta road, in length about $1\frac{3}{4}$ miles and about 100 acres in area, has also been completed.

The important section of the port between long Nose Point, Balmain, and Blues Point, North Sydney, in area about 530 acres, was completed early in 1927.

In addition to current soundings for dredging and other purposes, the total area sounded in connection with the special re-survey of the port amounted to 3,500 acres, or between 5 and 6 square miles.

Industrial.—The amendment of the "Industrial Arbitration Act 1912" had the immediate effect, so far as the Trust was concerned, of facilitating the registration of industrial unions of employees of corporate bodies, and awards of the Conciliation Committee have been made in respect of the clerical officers, and inspectors, foremen, timekeepers, storekeepers, patrolmen, &c., in the employ of the Trust.

The professional officers of the Trust have been working under an award for a number of years.

Pymont Bridge.—A committee was appointed in 1916 to report on the disposal of spoil from the City Railway excavations, and recommended amongst other things the reclamation at the head of Darling Harbour and the formation of a 100 feet roadway round such reclamation. The scheme also involved the ultimate removal of Pymont Bridge.

The recommendation was adopted and the Metropolitan Railway Construction Branch proceeded with the reclamation whilst the Trust has been carrying out a scheme of wharfage reconstruction as a result of the reclamation. Matters have now been advanced to such a state, both as regards reclamation and wharf construction, as will permit of the extension of the Main Port Roadway round the reclamation connecting Bathurst-street on the City side with Union-street on the Pymont side. The designs which have been prepared by the Trust provide for the removal of the Bridge as an essential feature, the principal reasons being from the point of view of shipping that the water area above the Bridge has been greatly restricted by the reclamation, and, from the aspect of vehicular traffic, that the new roadway will form a more direct route for the major portion of the traffic now using the Bridge. Advantages of this new route are that it will afford a better grade at the foot of Bathurst-street than the existing one in Market-street; that the traffic would be spared the interruptions which at present take place owing to the opening of the swing span of Pymont Bridge for shipping; that the city traffic along Sussex-street and crossing Market-street would be reduced by the time it reached Bathurst-street; and that a more convenient route from George-street than Quay-street near the Central Railway Station now affords would be available for the trams to Pymont, Balmain, and the suburbs beyond, which services at present contribute to the traffic congestion at Railway Square.

From the point of view of shipping, the removal of Pymont Bridge is regarded by the Commissioners as absolutely essential to the satisfactory navigation of the water area on the southern side as well as to obviate the harassing delays due to the opening of the swing span, the negotiation of which has been rendered more difficult by the construction of the reclamation.

The Commissioners have therefore approached the Public Works Department with a view to securing the removal of the Bridge at an early date, and a special Committee has been appointed by the Government to report upon the proposal. The scope of the inquiry has been extended to cover the general traffic problems which are involved by not only the removal of Pymont Bridge, but by further propositions which the Trust has in view for the better utilisation of the harbour foreshores. It has been pointed out to the Committee that these further plans of the Commissioners seriously affect the use of Pymont Bridge or any substitute for it. The development of Blackwattle and Rozelle Bays, which will shortly have to be undertaken by the Trust will involve either the removal

of Glebe Island Bridge or the substitution of one with a larger opening span. In the latter event the opening and closing of such a Bridge when these bays have been developed would be so frequent that this thoroughfare would almost certainly cease to be attractive, the traffic naturally preferring a somewhat longer route where it would not be subjected to so many interruptions.

Gladesville Bridge.—The Commissioners have been agitating for many years for the improvement of conditions at this bridge. They consider that the present structure is obsolete; that it is a serious obstruction to navigation and to road traffic; and that it is retarding the progress of the Upper Parramatta River and its tributaries.

The existing facilities for the passage of vessels are inadequate: The clear opening through the swing span on the southern side is 47 feet 8 inches, and on the northern side 53 feet 4 inches, but it is considered that a vessel having a greater beam than 35 feet cannot safely pass through the opening principally because the swing span is too close to the river bank, thus exposing vessels to strong tidal influences.

Besides catering for trams, vehicles, and pedestrians, provision has to be made for shipping traffic to pass through the bridge, which necessitates the frequent opening of the swing span. With a view to overcoming the consequent interruption of road traffic the Commissioners have been requested from time to time to make regulations requiring the hinging of the masts and funnels of vessels navigating the bridge. At high tide there is a maximum head room of 19 feet 8 inches, and the superstructure of some of the ferry boats (exclusive of the funnel) is at least 20 feet above the waterline therefore, the hinging or lowering of the funnels would not have any practical effect, as the ferry boats would still have to use the swing span. But, quite apart from the ferry boats, the extension of industrial enterprises above the bridge will necessitate the employment of larger vessels than are used at present, and it would be impracticable owing to their beam for such vessels to use the fixed spans even if their masts and funnels were hinged.

The existing method of operating the bridge is tedious, and results in irritating delays to road and river traffic.

A conference of representatives of the public departments concerned was held recently with a view to effecting an improvement, and the officers recommended, amongst other things, that the whole of the operations in connection with the opening and closing of the swing span, also the gates and the regulation of the trams, be made from the control tower. The Commissioners do not own the bridge, and are unable to do more than continually urge the adoption of a more satisfactory system.

It is inevitable as time goes on that the natural development, particularly industrial, which must continue in the western suburbs of the City and on the foreshores of Parramatta River, will be accompanied by the increasing use of the river for navigation by all classes of vessels. The Commissioners favour the replacement of the existing structure with a new high-level bridge designed to meet present and future requirements, and located possibly between Abbotsford and Bedlam Point.

Royal Visit.—The visit of Their Royal Highnesses the Duke and Duchess of York for the institution of the Federal Parliament at Canberra marked an epoch in the history of Australia. Special regulations were made by the Trust in connection with the arrival in the Port of H.M.S. "Renown," which conveyed the Royal visitors, and the preservation of a clear course for the vessel, also for the control of craft on the harbour at the time was in the hands of the Trust's officers, assisted by the Water Police. The arrangements for the departure of the vessel were similarly controlled.

Interstate Harbour Conference.—The Fifth Interstate Conference of Harbour Authorities was held at Adelaide from the 25th to the 30th September, 1926. The Harbour Authorities of all the States as well as the Commonwealth Navigation, Hydrographical and Lighthouse Departments, were represented.

Numerous resolutions in regard to the administration of the Ports of the Commonwealth were carried, making for greater uniformity of working which will be to the advantage of shipping in the Australian trade.

NOTK.—The tonnage of Oversea and Interstate vessels which proceeded to Newcastle and then returned to port with bunker coal is included in the figures representing the tonnage of Oversea and Interstate arrivals. The tonnage for the year ended 30th June, 1927, when compared in the aggregate with that for the year ended 30th June, 1926, shows an increase of 829,203 tons net, and an increase of 1,565,168 tons gross; steam vessels show an increase of 623, motor vessels show an increase of 64, and sailing vessels show an increase of 27. During the year 1917-1918, however, the shipping figures were affected by the general industrial strike, and again in 1918-1919 by the seamen's strike, and in 1919-1920 by the engineers' and stewards' strikes, and also slightly in 1922-1928 by the Newcastle coal trouble, and in 1924-1925 by the maritime strike, and again in 1926-26 1 y the british seamen's strike, irritation and Federated Engine Drivers' strikes. On account of the outbreak or war on 4th August, 1914, the shipping of this port has been considerably affected, as indicated by the figures for the years ended 30th June, 1914 to 1926, inclusive. It will be noted that the tonnage of vessels entering the port for the period of 12 months ended 30th June, 1927, exceeds, by 109,663 net tons, that of the 1914 period, and is the greatest in the history of the port.
